Physics Abstracts

Cumulative Subject Index

1955-1959

(VOLUMES 58-62).

Published by THE INSTITUTION OF ELECTRICAL ENGINEERS
Savoy Place, London, W.C. 2
In association with The Institute of Physics and The Physical Society
and The American Institute of Physics

FOREWORD

The Cumulative Subject Index covering the years 1955-1959 has been prepared basically as an amalgamation of the five annual published indexes. The entries under each subject heading are arranged in alphabetical order of the first word, irrespective of the year of the entry. Where a new subject heading was introduced during the 5-year period this has been noted and the attention of the reader drawn to the appended "see also" headings under which the relevant earlier literature will be found.

The numbers after the entries are the serial numbers of the abstracts, and the respective years are indicated by the initial number giving the last digit of the year; thus "8=1234" means "Abstract 1234 of 1958".

D. S. Hopper
Director, Science Abstracts.

May 1967

SUBJECT INDEX

INTRODUCTION

The entries in this index refer to the abstracts by their serial number, not by the page number. The entries are grouped under headings (printed in bold type, e.g. "**Abrasion**") which represent, in the main, general categories or concepts rather than specific names. If a heading for a particular subject does not appear, a more general heading should be consulted; for example, "Zone plates" would be listed under "**Diffraction**"; "Barkhausen discontinuities" under "**Magnetization process**". There are numerous cross-references directing attention to related headings in other parts of the index.

Many of the headings are subdivided by the use of subheadings, which are indented (i.e. printed slightly to the right) and commence with a small latter (for example, see the subheadings under "**Absorption**").

ARRANGEMENT OF HEADINGS AND SUBHEADINGS

The headings are arranged throughout the index in alphabetical order according to British Standard 1749:1951 (the "word by word" system, not "reading right through"). The subheadings, with a few exceptions, are themselves arranged in alphabetical order under their respective headings. The exceptions (for example, see the subheadings under "**Spectra**", "**Crystal structure, atomic**") are cases where a more logical order is preferable to a purely alphabetical one.

ARRANGEMENTS OF ENTRIES UNDER HEADINGS

Entries are arranged in two alphabetical groups as follows. First group: generalities and named substances (in words); second group: named substances (chemical formulae). If a search is being made for a particular substance, both the first and second alphabetical groups should be inspected since, for example, alumina may also be listed as Al_2O_3.

COLLECTED LIST OF SUBJECT HEADINGS

The alphabetical arrangement of the headings is the most convenient for locating a known heading quickly, but there may be other related headings elsewhere in the index of which the reader is unaware, and which he would only come across by accident. To assist the reader to discover all the headings appropriate to his subject, a collected list of the headings is given on the following pages, which should be consulted as a matter of routine each time a search is made. In this list, the headings are not arranged in alphabetical order, but are grouped into sections by subject on the same basis as the arrangement of the abstracts in the monthly issues of Physics Abstracts. By using this list, the reader can quickly determine which are the headings appropriate to his subject, and they are then easily found in the main index in their alphabetical position.

HEADINGS WITH NO ENTRIES

Because physics is a developing subject, it is not possible to maintain the list of headings unchanged from year to year; it is subject to a continuous process of revision, with the introduction of new headings and subheadings, and the alteration and elimination of old ones. This process is a gradual one, however, and the great majority of the headings used in any given year are the same as those of the previous year. The headings used in this cumulative index are those of the 1959 index, so that entries under headings of the years 1955-58 which were changed by 1959 now appear under the updated headings. Those headings and subheadings, for which there are no abstracts recorded in the present volume, are followed by the announcement "No entries", this supplies confirmation that these headings had not been dropped from the index, and entries might reappear under them in a later year.

ELEMENTS, COMPOUNDS AND OTHER SUBSTANCES

The names of elements, their compounds, a few compounds of special interest (e.g. "**Water**") and a few common materials (e.g. "**Wood**", "**Paper**") are included as headings. Under these, as well as under the appropriate "subject" headings, are listed any abstracts which contain significant physical information about the element, compound or substance named; except, however, that abstracts listed under headings referring to nuclear properties, including radioactivity, are not necessarily also listed under the substance name. The entries under these headings are themselves arranged in alphabetical order of substance or nuclide names, so that a given substance can be readily located.

Inorganic compounds of the elements are listed under the first element in the chemical formula, and all the compounds of a given element are grouped under a single heading (e.g. "**Sodium compounds**"). Alloys are listed under the first constituent, e.g. Cu-Ni alloys under "**Copper compounds**". Organic compounds are grouped under "**Organic compounds**", "**Polymers**", "**Plastics**" and under special substance headings such as "**Paper**", "**Proteins**", etc.; all the latter are listed in the collected list of headings on the following pages.

BEFORE USING INDEX, CONSULT LIST OF SUBJECT HEADINGS PRINTED ON THE FOLLOWING PAGES

LIST OF SUBJECT INDEX HEADINGS

The headings used in the Alphabetical Subject Index are listed below, grouped into sections by subject on the same basis as the arrangement of the abstracts in the monthly issues of Physics Abstracts. Many of the headings are listed in several places, so that each section lists all the headings which concern its subject. Those headings which it is desired to consult can be found in the main index in their respective alphabetical positions.

AN INTRODUCTION TO THE SUBJECT INDEX WILL BE FOUND ON PAGE LS1

Polymers

The chemical elements are listed by name, followed by their compounds. Organic compounds are grouped under the heading "Organic compounds". In addition, there are also the following special substance headings:

Alkali metals
Alkali metal compounds
Alkali earth metals
Alkali earth compounds

Alloys
Rare earth metals
Rare earth compounds
Inert gases

See also the introduction at the beginning of the Subject Index.

Abacs (See Nomograms)

Aberrations, optical (See also Electron lenses; Ion optics; Optical instrument testing; Optics, geometrical; Particle optics).
- achromatic combinations of half-wave plates 9=6803
- achromatic objective computation 5=822
- achromatism for more than two wavelengths 5=3545
- at apertures, wave-theoretical study 9=3259
- aspheric surfaces, use 7=9591
- astigmatism, optical path study 8=3841
- asymmetrical systems 5=2552
  - reflecting, and X-ray microscopes 5=2549
- binoculars, new, Zeiss 6=5811
- in catoptrical systems, with one arbitrary surface of revolution 9=5479
- characteristic curves on image-space planes 9=1236
- chromatic, in doublets, correction 8=5752
  - effect on diffraction images 7=5963-4
  - Fresnel lens (for lighthouses), calc. 9=6687
  - lateral, rel. photog. resolving power 8=3844
  - optical merit function for lens 8=3846
  - secondary 8=1589
  - and spherical, by optical bench 9=3262
  - and spherical, simultaneous minimization 9=7927
  - for symmetrical triplet 6=8646
  - in Taylor triplets 9=10740
  - transverse, of various optical systems 9=2194
  - zonal corrections, final radius calc., lens thickness dep. [9=10734
  - zoom lenses , correction 8=6792
- comatic, interferometric meas. 6=1947
- concave gratings, with toroidal and spherical surfaces, astigmatism 9=9520
- concentric spheres, spherical aberration, rel. to η 9=6689
  - spherical and zonal aberrations 9=6688
- concentric systems, spherical corrections 9=1250-1
- correction, differential 6=3594
  - element for mirror objectives 5=5972
  - by filter 8=2220
  - inclined plane in convergent light 6=4288
  - Kellner eyepiece 6=187
  - least squares method 6=3593
  - by stopping down of photog. objective 6=3421
  - use of digital computers 6=184
- diffraction grating wave-front, interferometric meas. [5=1739
- diffraction theory, images of point sources 9=13191
- doublet lens correction, tables 5=3546
- effect on, diffraction figures of revolution 5=5297
  - frequency response of lens 9=5481
  - image of Lambert radiator 9=1252
  - resolving power of photog. lens 6=5752
- error balancing of system plus receiver 8=939
- extra-axial disk of confusion, rel. to axial correction [9=1252
- of the eye, effect on accommodation responses 9=7704
  - spherical 6=3412; 7=2882-3
- field, in wide aperture optical systems 5=823
- fifth-order, Ronchi test 9=10743
  - spherical, corrected configuration lenses 6=4971
- Fizeau interferometer, spherical 8=998
- Fourier analysis, wave and geometrical optics comparison [8=5745
- frequency response, numerical evaluation 8=1587
- general aberration terms, using matrix algebra 9=1235
- glasses for 3-colour achromats 9=6686
- high refractive index materials, correction for 9=9381
- higher-order, coeff. calc. by computer 9=10741
  - coeff. predicting displacements, for 40° and 70° field objectives 9=13136
  - intrinsic coeff. calc. 8=5754, 8674-5
  - in optical system calc. 9=10736
  - theory, algebraic methods 6=7250
- in Huygens compensating ocular 9=3368
- images of partially coherent objects 7=5955
- imaging of curved surfaces 7=9055
- imaging of surfaces and volumes 6=1025
- i.r. spectrometer optical system 6=7267
- laminated lens 7=1990
- liquid conc. gradient meas., 3rd-order aberrations 9=7998
- measurement, use of gratings, Ronchi fringe theory 9=4418
- meridian, simultaneous correction 5=4497-8, 8579
- microscope condenser, effect on image, "effective source" theory 9=6692
- mirror anastigmat with two concentric spherical surfaces [9=10728
- mirror monochromators, spectral line distortion 9=7936
- monochromators, effect on resolving power 9=9397

Aberrations, optical – contd
- objectives, correction by phase plate 9=10744
  - spherical, meas. 8=3845
- optical bench distortion measurements 9=6685
- optimum lens system 5=7815, 8580
- permissible tolerances 7=5966
- photogrammeter surveys, effect of objective distortion [9=4244
- photographic lenses 5=5968
- plane-parallel plates, correction 7=7715
- polish defects, effect on contrast transfer function 9=13202
- primary coma, effect on frequency response 9=3257
- quasi-symmetrical reflecting objective 9=11985
- refracting systems, vector calculus appl. 5=1661
- representation, approx., by binomial series 6=4972
- representation by extension of paraxial imagery region [5=824
- representation by polynomials 5=1662
- residual, automatic correction 8=561
  - conflection doublets for high-speed scanning 7=1167
  - control in design of anastigmats 8=941
- response functions, asymptotic expansions 8=6791
- Seidel free optical system 9=7929
- Seidel theory of thin-lens triplet 9=167
- spherical, correction, appl. of diffraction theory 9=6691
  - effect on image 5=7814
  - effect on response function 9=170
  - asymptotic series for large η 8=5753
  - geom. calc. of freq. response 8=940
  - improved test for 5=825
  - optical path study 8=3841
  - rel. to information content of image 7=5965
  - wavefront calc., recurrence relations 9=7919-20
- spot-diagram study 8=2219
- in star image, rel. to telescope aperture 8=4620
- telescopes, distortion correction 9=1254
  - doublets, automatic calc. 9=4417
  - mirrors, effect of stresses 9=9260
- thermo-optical aberrations 9=10730-1, 11986
- thin lens analysis of secondary spectrum 9=9380
- 3rd order, in anamorphic systems 6=4973
  - in aspheric lenses 6=2770
  - automatic correction 5=5969; 6=189
  - coeff. calc. 7=1989
  - desk calc. computation 6=188
  - rel. to slit image light distrib. 6=3598
  - varifocal systems 7=7713
- uniform-field objective by apodization 5=6883
- use to obtain higher resolving power 5=2547
- wave-front aberrations of a lens system, adjustment [9=6690
- wave optics calculation 8=1583
- wave-surface for meridional pencil of rays 9=1241
- weak, effect on image contrast 5=4494

Abrasion (See also Hardness)
- adhesive wear 7=804, 2758
- amorphous structure from grinding process 8=810
- influence of elastic-plastic instability 5=9182
- high speed sliding, effect of oxidation 8=6470
- metallic wear, mechanical 8=4493
  - severe 6=7772
  - and surface film formation 6=8998
  - temp. effects 7=4821
  - unlubricated surfaces 6=7773
- metals, exo-electron emission 8=4063
  - structure of abraded surfaces 6=3305
  - transfer and wear process 5=8332
- non-metallic wear 5=3199
- optical flats, eccentric loading during grinding 7=7528
- tools, radioisotope method 5=9194; 7=3776
- u.s. machining, with B carbide suspension 9=13868
  - by low power vibration 5=2528
- wear and friction, coefficients 9=887
  - mechanism 8=4492
  - relation between 9=8943
  - rel., under boundary conditions 8=4496
- Al, cavitation erosion 6=7769
- calcite, transformation to aragonite by grinding 7=6748
- Cu, cavitation erosion 6=7769
- Cu oxide rectifiers, grinding, effect on props. 8=4014
- Ge, rel. to semicond. props. 7=9183
  - Russell effect 6=4765
  - surface damage by lapping 7=9435
- MgF_2 films on glass, wear resistance 7=787
- quartz, particle emission from polished surfaces 9=8873
- rubber 5=2260

Abrasion - contd
  Si, distorted layers produced by grinding 8=5503
    Russell effect 6=4765
  steel, mild, fretting corrosion 6=7771
    wear, effects of frictional heating 8=6469
    wear rel. to distance run 7=2759
  Teflon sliding on Teflon, wear 8=2693
  W carbide, sliding on Cu and steel 8=3529
Absorption (See also Alpha-rays, absorption; Beta-rays, absorption; Cosmic rays, absorption; Electrons, absorption; Gamma-rays, absorption; Mesons and hyperons, absorption; Neutrons and antineutrons, absorption; Protons and antiprotons, absorption; Sorption; X-ray absorption).
  charged particles, in homog. e.m. field 8=1818
    in rectangular waveguide, energy losses 9=3652
  elastic waves, causes 8=542
  heat radiation, by various materials 7=3192
  optical activity in absorbing media 9=6805
  photons from He, Ne discharges, cross-sections 9=6171
  radiation, by cylinder 7=9949; 8=4162
  shear waves, in Mg alloys and quartz, meas. 9=11919
 acoustic waves (See also Noise abatement; Transmission, acoustic waves).
  absorber construction, reactive components 7=3112
  absorbers for anechoic chamber 8=557 [5=9500
  absorbing walls effect on detonation induction distances
  anomalous, bulk viscosity and relaxation mechanism 5=793
  appl. to ionic reaction rate meas. in soln. 5=5032
  attenuation, in bubbly mixtures 7=9572
    by dissipative silencers 6=6490
    in ducts, effect of air flow 8=8662
    in ducts, (1,0) and (2,0) modes 5=9491
    of high-amplitude waves in horns 8=2198
    in lamellar nonuniform media, theory 6=4913
    in layer with velocity discontinuity 8=6756
    meas. in sediments, reson. chamber method 6=4946
    of propogation over ground 9=7879
    and regeneration in ducts and jet diffusers 9=11974
  auditoria, carpets 6=169
    carpets and upholstered chairs 6=1939
  broadcasting studios, resonator elements 5=3533
  coeff., meas. in reverberation room, effects of arrangment
    and area of materials 9=9360 [9=11975
  by cylindrical diffusers 5=152
  dislocation relaxation mechanism 6=4045-6
  in dissociating electrolytes, theory 8=3805
  double relaxation effects 7=3090
  in elastic medium, of pulses 8=3797
  in electron-ion plasma 9=12413
  in engine test cell structures 5=6858
  ferromagnetic dielectrics 8=7856
  finite amplitude waves in relaxing medium 9=4388
    theory, review 8=6755
  in fluids, chemically reacting 8=8650
    rel. to relaxation time 7=5128
    viscous conducting, theory 6=142
  forced spherical and cylindrical waves 8=93
  in gases, molecular process at high temp. 7=183
    reacting, rel. to chem. Kinetics 6=1679
    resonator meas. 8=923
    with solid particles 9=1191
  gratings 5=5955
  heat conduction losses, boundary layer 6=158
  hollow resonators, with gratings 6=5745-6
  influence of fluid motion past a boundary 9=9329
  insulation of heavy structures 7=1157
  jet engine testing, absorbers 6=7241
  Kirchhoff—Helmholtz, in tubes 7=1142, 7=7684
  layered materials, l.f. parameters 8=3811
  in lined ducts 8=8663
  in liquids, bulk viscosity effect 8=2846
    in chem. equilib., reaction const. det. 7=8232
    compressional relaxation 9=6640
    large-amplitude waves 8=8641
    meas., 20-600 Kc/s, reson. reverb. method 5=146
    pressure dependence 7=4066*
    rel. to free volume 9=102
    rel. to viscosity and spec. heat 6=149-50
    relaxation processes 8=5731
    structural relaxation 8=7742
    structure study, conference 5=4457
  l.f. sound reducer 5=6880

Absorption - contd
 acoustic waves - contd
  materials, advances since 1929 in testing 5=3530
    manufacture and distrib., review 5=3529
    properties 7=205
  measurement, comparative, porous matls., tubes and
    reverberant rooms 5=1644
    reverberation chamber method 5=1645; 6=3586; 7=4104;
      8=3817
    standard methods 7=9051
    standing waves method 6=5734; 8=3817
  molecular, due to irreversible entropy prod. 6=8752
  multiple panel absorber 5=153
  nonuniform and reverberation formula 9=9358
  panel efficiencies improvement by resonators 5=814
  patches of absorbent material 7=5150
  plate resonators for l.f. 6=1938
  porous materials 5=5955
    comparative meas., tubes and reverberant rooms
    grooved sheets 9=2175 [5=1644
    with rectangular slits, specific impedance 9=13101
  pulse technique applied to wall absorption 9=13127
  rel. to acoustic streaming 8=6776
  rel. to acoustic streaming and second viscosity 5=93
  rel. to dispersion, e.m. wave analogy 6=4909
  resonant panels with perforated facings 7=204
  resulting from heat radiation, calc. 8=2908
  in rigid liquid-filled tubes 6=6439
  Sabre reverberation and sound power calc. 9=9359
  semiplastic earplugs 5=6859
  by single absorptive strips in ducts 5=123
  in solids, by conduction electrons, effect of mag. field
  in steady flow 9=9331 [8=7480
  strip of absorptive material in diffuse field 9=6667
  test cell silencing, splitter configuration 5=9519
  thin-layered medium, theory 6=6440
  2-component medium 9=5451
  underwater studies, absorbing structures 6=5747
    anechoic lining 5=7782
    anechoic sound tank 6=1011
  in vapours, review 5=5273
  wall design 9=7913
  in A 7=7679
    solid 5=8560
  in air, using pulse waves 8=3797
    rel. to humidity, 1-12.5 kc/s 9=1198-9
  in blood 9=4390
  in CO$_2$ 7=7679
    thermal relaxation 9=7895
  in castor oil, interferometer det. 7=9577
  in cotton wool, l.f. parameters 8=3811
  in ethyl acetate, critical review 8=7775
  by glass particles in liquids 9=2172
  in glass fibres, l.f. parameters 8=3811
  in glass wool, l.f. parameters 8=3811
  in haemoglobin solns. 9=6644
  in KI and KBr, nuclear magnetic resonance coupling
  in MgSO$_4$ aq. soln., calc. 8=3805 [9=11264
  in mineral wool, 100-500 c/s 9=150
  in mortars, vermiculite, 125-4000 c/s 9=1225
  in N$_2$ 7=7679
    under pressure 9=3226
  Pb attenuation relaxations rel. to dislocation 5=7786
  in plastic membranes, and reson. freq. 6=5732
  plywood panel absorbents 9=10726
  in water, sea 7=7685, 9575
    sea, reverberation tank meas. 9=11940
    shallow, due to absorbing bottom 5=7781
    surface layer, isothermal, attenuation meas. 6=4947
  in water-saturated sediments, reson. meas. 6=4945
  in Y$_3$Fe$_2$(FeO$_4$)$_3$ (yttrium iron garnet) 8=6758
 acoustic waves, ultrasonic
  acoustic focusing system, ampl. factor, dep. on u.s.
    intensity in water 9=7892
  appl. to ionic reaction rate meas. in soln. 5=5032
  in aqueous suspensions 5=6833
  attenuation, of compressional pulse in solid waveguide
    frequency dep. on plastic deformation 8=1560 [9=6632
    meas., diffraction effects 6=3579
    meas., dispersion effects in waveguides 7=8485
  at critical point region 8=3801
  in dielectric crystals 8=4804
  in dissociating electrolytes, theory 8=3805

- Absorption - contd
  - acoustic waves, ultrasonic - contd
    - due to thermoelastic heat flow 7=4067
    - energy behaviour, expt. conditions effect 6=117
    - in ferromagnetics, resonance method 9=5460
    - at flat surface, rel. to angle of incidence 6=5740
    - in gases, as function of gas pressure 9=5442
      - light, method and coeffs. 6=3571
      - mixtures, diffusion effects 5=3514
      - monoatomic, irreversibility 9=4392
    - inhomogeneous media 7=5135
    - insulation props. of materials 6=4943
    - intensity changes in diffraction spectrum 6=2752
    - intensity dependence 9=5452
    - by liquid-crystal compounds 6=4262
    - in liquids 8=3816
      - acoustic streaming meas. method 9=6645
      - in aq. soln., anomalous, theory 6=8630
      - in aq. soln., cavitation, chem. effect 5=7790
      - associated 7=5920
      - associated and nonassociated 9=146
      - binary, mixtures with dimeric assoc. components 5=9498
      - compared with radiation press. and streaming vel. [9=3237
      - differential meas. method 6=8055
      - dissolving solids effect 5=6835
      - effect of exptl. conditions 5=4458-9
      - electrodynamic balance meas. method 6=7231
      - Fermi liquid 8=2898
      - finite amplitude waves 5=6823; 7=3091; 8=6757
      - finite amplitude waves, rel. to intensity 5=1621
      - Gierer—Wirtz theory 7=1981
      - heat energy produced 9=9332
      - intensity effect 7=9574; 8=544
      - interferometric meas. method 8=3827
      - interferometric method, applic.Dye's equiv. circuit [9=13103
      - isochromates meas. method 5=2514
      - light diffract. meas. method 5=4455
      - measurement methods 7=7686, 8484; 8=558
      - mechanism 8=1567
      - mesomorphic 5=9492
      - mixtures 6=998, 7217
      - nonassociated, under high pressures 6=4262
      - optical meas. method 5=134; 7=8486
      - organic, finite amplitude waves 7=1140
      - organic, homologous series 9=2170
      - organic, mixtures 9=5456-7
      - organic, temp. coeff., 15-60°C 8 =3815
      - partially miscible 5=9497
      - reflection meas. method 6=8054
      - rel. to light scatt. 5=7784
      - rel. to phys. props., review 6=5729
      - rel. to quartz transducer efficiency 7=4074-5
      - rel. to relaxation 7=7680
      - rel. to spec. ht. 5=7785, 8564
      - reverberation meas. method 6=7219
      - rotational isomerism study 5=133
      - second viscosities, reviews 5=81, 90-2, 95
      - solutions, excessive absorpt. due to chem. react. 6=3572
      - some effects on 5=6843
      - structures study 5=807, 4457, 5282, 5957

    effect of neg. impedance source 7=8475
    e.s., for high frequencies 6=1005
    e.s., use in Schilling sound app. 6=1927
    modulated air-flow 9=7899
    nonlinear distortion, causes 5=2522
    nonlinear distortion, meas. 6=4922
    sound distribution 6=1923
    sound field representation 8=2914
    2-speaker systems, effect of noise 7=4092
    vented enclosures, acoustic interaction 9=9334
  l.f. tone-radiation demonstrator 5=8566
  magneto-electric system, design and calib. 8=6765
  megaphone, rel. to intelligibility in noise 9=4187
  moving source, spatially extended, field calc. 8=2915-16
  multiplicative arrays, theory 8=2911
  mutual radiation impedance of sources 9=9336
  organ, electronic, special problems 6=155
  orifices of varied shapes and edges 8=8656
  oscillating surface 6=8064
    amplitude distribution 6=5735
    faces of a wedge 6=4924-5
  piston with infinite flange, radiation impedance 7=3094
  plate, intensity and direction rel. to flexural waves 5=1624
  point sources, directional circular arrays 6=4930
    linear arrays 8=8655
    in presence of 2 media 8=2910
    reflection of waves from, at rough surface 8=3826
  pointed radiators in non-uniform media 6=8044-5
  quartz, plate, under pulse conditions 8=4808
    two-frequency 6=8059
  radiation resistance in water under u.s. cavitation 9=13122
  rigid ring, into infinite wall 9=10716
  rotating dipole, theory 6=6460
  scalar wave fields, directivity 6=1920
  sound field (book) 8=6760
  sphere with ridges and cylinder 7=5942
  spherical harmonic point radiator, field integral 8=4798
  3-dimens. array, directivity index 5=809 [5=2538-9
  throat loudspeaker for hemilaryngectomized subject
  transmitters with solid dielectric, for airborne u.s. 5=2520
  ultrasonic, efficiency at focal regions 8=926
    high-intensity 8=925
    spherical waves 9=11922
    transducer of Ni ferrite 6=8631
  vibrating solids, kinetic theory effects 5=810
Acoustic receivers (See also Acoustic transducers; Microphones).
  absolute calibration 7=4069
  $BaTiO_3$ piezoelectric 6=6458
  directional, for underwater ranging 8=96
  directivity, effect on scattered signals 8=4810
  effect of independent noise sources 8=6766
  optico-acoustic 8=947
  piezoelec. materials, electromech. efficiency 7=5941
  quartz, under pulse conditions 8=4808
  telephone receiver, subjective free-field calib. 5=2533
  time-averaged product array and intraclass correlator, performances 9=13117
  ultrasonic, $BaTiO_3$, miniature 8=3822
    miniature piezoelectric, freq. charac. meas. 9=11922
    NiZn ferrite 8=4809
Acoustic streaming
  acoustic air pump 7=8343
  analysis 9=11961
  axially-symmetrical, at the walls of a cylinder 9=5436
  boundary layer meas., using thermistor 9=7903
  boundary losses 8=556
  cavitation microstreaming 9=2182
  effect on acoustic resist. calc. 5=4445
  in liquids, small scale 7=4052
  microstreaming applied to surface reaction 9=7904
  near a boundary 8=2190
  near a cylinder 5=1609
    thermal effects 9=7905
  near a locally excited membrane 9=157
  near a small obstacle 5=4471
  near a sphere 6=140; 7=3077
Acoustic streaming - contd
  pressure on sphere, meas. 7=7697
  rel. to radiation pressure 7=1153
  rel. to sound absorption 8=6776
  at resonator aperture 8=3828
  rotational flow of viscous liquid 6=5728
  and second viscosity 5=81, 92-3, 95
  source terms for vorticity and streaming 6=142
  u.s. absorption meas. 9=6645
  u.s., in fluid 7=7663
  velocity and radn. pressure by quartz transducers 9=3237
  visualization, in liquid He 8=156
    at two-liquid boundary 8=3829
  wide freq. range study 5=4470
Acoustic transducers (See also Acoustic generators; Acoustic radiators; Acoustic receivers; Hearing aids; Microphones; Sound reproduction).
  air layer between membrane and electrode 6=987-8
  $BaTiO_3$, ceramics, improved composition 7=7687
    ceramics, mosaic type, 40-250 kc/s 9=13108
    circular plate vibration 7=3071
    cylinders, resonances 9=4396
    cylind. shells, elastic wave propag. in walls 5=126
    piezoelectric properties 9=1422
    polarization effects 5=135
    as u.s. oscillator 7=3244
    use for u.s. delay lines 5=4461
  bizonal amplitude shading 6=154
  calibration, by impedance meas. 6=7226
    self-reciprocity, in solid medium 8=2912
    of 2 transducers assumed identical 9=9335, 11952
  ceramic ferrites 7=4070
  composite piezoelec. resonator 5=1629
  continuously-variable frequency 6=3576
  conversion efficiencies from temp. meas. in liquids 9=9332
  crystal pickups, mech. input impedance 5=6839
  designs, current, limitations 8=6769
  directivity, characteristic curves det. 5=3519
  distributed-amplifier type, for u.s. power 5=137
  distributed transducer 8=8658
  earphones, noise attenuation by sockets 5=2535
    semiplastic socket 5=2536
  efficiency limitations and mismatch 8=6768
  electroacoustic converter for visible sound images 6=4929
  electroacoustic reciprocity relationships 8=550
  electromechanical, elec. impedance—sensitivity rel. 8=6763
  electronic sector scanning of beam 8=7780
  e.s., e.m. and electrodynam., 4-pole equiv. circuits 5=4460
  flux-responsive mag. reprod. heads 5=6840
  hydrophones, calibration, 2-projector null method 5=9503
    frequency-sensitivity meas. 9=11967
    plane, calibration 7=185
  for liquids, props. of ferrites 5=2521
  magnetostrictive, Al ferrol suitability 6=3825
    of Al—Fe alloy or Ni—Cu ferrite 8=1569
    equivalent circuits 6=2754
    of Fe—Al alloys 6=4269
    high-power 6=3577
    high-power, spray production 5=4462
    materials, evaluation 5=1630
  mechano-electric 6=6462
  NiCo ferrite, as transducer material 8=8143
  Ni—Fe alloys, use 7=8008
  nonlinear distortion of non-periodic signal 6=4964
  oscill. Hg—electrolyte column, U-effect 8=3150
  piezoelectric material, electromech. efficiency 7=5941
  piezoelectric phonograph transducer, analysis 9=6647
  piston piezoelectric radiators, design 9=5462
  quartz, efficiency, rel. to u.s. absorption in liquids 7=4074-5
    in organic liq., dielec. heating 6=6599
    output, calorimetric meas. 6=5737
    for u.s. delay lines 5=4461
  rectifier, acoustic 9=11950
  reversible, limitations 6=3575
  rubber, use under water 7=7688
  shielded cable, high-noise, as sensing element 5=4330
  sonic images prod. 7=7693
  thermoacoustic transduction in potl. flow 6=3565
  throat loudspeaker for hemilaryngectomized subject
  torsional, using m-type Ge 8=2913 [5=2538-9
  transformation of u.s. into visible image 8=4819
  u.s., magnetostrictive, meas. of output 9=6646
    of Ni ferrite 6=8631

Acoustic transducers - contd

ZnS surface vacancies 6=5101
on silica glass, effect on i.r. spectra of adsorbates 7=6669
specific surface det. radicals, det. by paramag. reson. 5=2003
stabilization of free radicals, det. by paramag. reson.
"steric protection" of colloidal particles 5=606
surface regions, thermodynamic treatment 5=5060
time, rel. to oscillation time 5=5054
2-dimensional standard state model 6=983
A, on graphite, liquid lattice theory 8=6489
single atoms on carbon black 9=1926
Ag alloys, intercrystalline 8=4437
Ba on W 5=10045; 9=11614
benzene, by charcoal, thermodynamics 5=6586
on formation of C films 9=5184
on graphite powders, interpartide condensation effects 9=11615
on C, liquids and gases, nuclear polarization 8=7315
CO, on Ni evap. films 7=2781
on W, effect on work function 8=3177
on W filaments 9=5231
clay minterals, alkali ions on attapulgite 6=4729
montmorillonite—Cs—Sr ion-exchange equilib. 6=1711
on Cu_2O, effect on electronic state 5=6143
effect on photoconductivity 8=7017, 7025, 7973
cyanine dyes, spin-orbit perturbation 7=6403
ethane on evaporated metal films 9=6312
on Ge, of non- and dipolar molecules 8=6989-90
H, atoms, on Si, photoemission 9=8976
on Au films, effect on elec. resist. 9=3436
Cu films, effect on elec. resist. 9=3435
isotope separation 9=8685
low temp., hindered rotator model 9=1820, 12741
on Ni 8=5510
para H, adiabatic cooling 9=1820
on Si films 9=7586
on W 7=6671
on W, mobility 6=769
on W, surface diffusion 6=5501
He, on Au films, effect on elec. resist. 9=3436
on Cu films, effect on elect. resist. 9=3435
first adsorbed layer 7=1234
on pyrex at 4.2°K 9=8975
on TiO_2 5=10047
He^3, He^4, on activated charcoal 6=1712
of He^3 and He^4 mixtures 5=4600
Hg on Fe 8=8375
at Hg, polarized, in contact with org. acid 6=1710
I^- and CN^-, on Pt, Ni and Ag 8=4509
inert gases, on W 9=4094, 11130
K on quartz surfaces 5=7897-8
K^+ on (100) Kcl surface 5=8370
Kr, on Fe films, surface area studies 9=2961
long-chain compds. on polymethymethacrylate 6=7188
methane on evaporated metal films 9=6312
methylene blue on Hg surface 6=5502
on MoS_2, effect on photocond. 8=7973
N, electronic interaction with Ni films 5=10042
on graphite powders 9=11615
on Mo, contact resist. meas. 9=1927
on W, contact resist. meas. 9=1927
on W, elec. properties 8=7099
on W filaments 9=5231
on W, state of N 6=771, 4069, 7796
NH_3, on glass, H bonding 6=1070
on silicon 6=1708
Na on hot W 8=6004

Adsorption - contd
Na ions, on Ge surfaces 7=9185
Ni on Mo, field emission study 8=2057
Nylon 6, effect of water on viscoelastic properties 9=13848
O, on anthracene, effect on elec. props. 6=8793
on Au films, effect on elec. resist. 9=3436
on Cu films, effect on elec. resist 9=3435
on Ge clean surfaces 9=7530
on Ge films, 77°K 9=11595
on Mo, contact resist. meas. 9=1927
on PbS, effect on photoconductivity 5=7966
on Si 9=4092, 7530
on SiC crystal surfaces 9=7528
on W 8=6487; 9=4093
on W, contact resists. meas. 9=1927
on W, field electron microscope study 5=8369; 6=1714
on W. filaments 9=5231
on W, surface diffusion 6=5501
on ZnO, elec. effects 7=2783, 7118
on ZnS, photoexcited 5=5415; 6=5503
organic compds. in ice, effect on mech. strength 8=4483
organic gases on silica gel, i.r. study 6=768
PbS layers, effect of gases on photoconduction 9=13321
polymers, high, flexible, statistical mechanics 8=441
Si, cleaned by heating in vacuum 9=13892
Sr on W 5=10045
water, on alumina gel, dielec. invest. 5=4628; 6=7373
by anodized Al, elec. effects 6=2112
on ceramics 9=7587, 10352
on glass 9=10352-3
on glass, multilayer 5=2286
on metals 9=10352
on Na acetate, effect on phosphorescence 7=3153
on silica, dielec. props. 5=2706
on silica gel, dielectric invest. 5=4628; 6=7373
on silica gel, n.m.r. 9=9837
on solids, phase transformation 6=1713
on tobacco smoke particles 6=7794
Zr on W 9=11614
Aerials (See Electromagnetic waves, radiators).
Aerodynamics (See also Flow, gases; Jets; Shock waves; Supersonic flow; Turbulence).
accelerated motion of droplets and bubbles 6=6411
acceleration of bodies through sonic velocity 5=4430
aerodynes, stability and stabilization 6=978
aerofoils, in transonic flow, points of inf. accel. 9=10690
aerothermodynamics of rarefied gases 9=1162
Benard-Karman vortex street, stability 5=1596
boundary layer, growth on spinning body 8=911
profile meas. 5=8530
colliding galaxies 9=986
compression wave reflection from wedge 6=128
conformal maps, computation 5=2458
cosmical gas dynamics, symposium 8=8568
damping on a vibrating cylinder 5=1604
drag on artificial satellite 8=4688
effect of jet stracture of supersonic nozzles on noise generation 9=4409
Einstein's unidimensional theory 7=1874
field, near slot in acoustic resonator 7=4078
flow noise, conference 8=3836
gas-dynamical observations on excited gas streams 5=1666
gases under high stress, fundamental equations 5=119
gusts, effect on air craft 7=6942
impact in cold gas, theory 6=6430
interaction of impact waves 6=6453
interferometric study of transparent films 6=8706
magnetohydrodynamic dissipation 9=1604
meteorites, drag 9=6450
motion of 2 cylinders in inf. ideal fluid 9=5402
plates in random pressure field 9=9319
rapid expansion of compressed N 5=2480
Rayleigh's problem, for arbitrary cylinder 5=5908
for a general cylinder 7=4030
rotating cylinder apparatus for research in rarefield atmos. 5=8550
shock location and real gas effects 6=6451
sound generation, solid boundaries influence 5=8567
spheres, drag in free-molec. flow 8=2871
drag at Mach 5-10 8=8626
supersonic drag, in free flight 8=5712
transition from free molec. flow, heat transfer 8=8627
traversing yawmeter 6=4249

Aerodynamics - contd
- use of gas—hydraulic analogy 7=3062
- wedge entry, in compressible fluid 9=11886
- wind tunnel, gas density probe 9=2141

Aerosols (See also Foams).
- adhesion of drops to solid surfaces 5=9462-3
- AgI, nucleus counting 5=5051
  - X-ray diffraction study 5=5751
- aggregation, causes 5=1284
- airborne aggregates, terminal velocity and struct. 5=1257
- anisotropy, effect on light scatt. 6=3656
- atmospheric, autoradiography 5=471
- atomization by elec. discharges 7=3796
- atomization of liquids, by air streams 9=95
- automatic isokinetic sampling 9=912
- coagulation, acoustic, role of turbulence 9=11960
  - acoustic sirens for study 8=5734
  - rate of particles 7=3068
- collection efficiency of fibre mats 6=1707
- concentration distribution verification 8=826
- condensation nuclei, diffusion coeff. meas. 8=8555
- counting nuclei by cloud chamber 6=5500
- decay in small and v. small vessels 7=1795
- deposition of droplets from gas stream 6=8020
- dielectric constants 7=7844
- diffusion, rel. to precip. and coagulation 7=5915
- distribution frequencies 9=6353
- dust, airborne, sampling instrument 7=1666
  - airborne, terminal velocity and classification 5=1264-5
  - atmos. dispersal 6=5550; 8=5533
  - cloud, size classification by elutriation, theory 5=1260
  - deposited by jet, distrib. 5=3234
  - elutriation 7=7444
  - hazards in industry, instrumentation 8=2082
- electrification, by diffusion 5=5050; 8=3968
- equilibrium ionization produced by dust particles, etc. 9=12405
- filtration by fibre filters 5=10041
- filtration theory 8=8511
- fog droplets, size meas. on gelatin film 9=7692
- generation of homogeneous mμ aerosols 9=8973
- horizontal movement of particles 7=4035
- as ice-crystal nuclei 9=7600
- impact on solid surfaces 9=10673
- improving sampling surface for water droplets 5=1336
- inertial impaction on cylinders 5=3233
- light scattering by, in atmosphere 9=12900
  - measurement 5=4568
  - Mie theory 7=5254
  - polarization ellipticity 9=5594
  - by polydisperse dust clouds 5=875
- mists and smokes, cell structure 6=7000
- particle impingement on transverse cylinder 6=5718
- particle penetration depths in a filter 9=4051
- photographic analysis 7=8922
- prod. by elec. dispersion of liquids 5=7479
- radioactive dusts 9=12909
- radioactive, electrostatic monitor 6=4120
- silica dust, light extinction 7=4246
- size, anal. by selective sampling, aspiration method 5=1258
  - det., diffusion method 5=10040
  - distrib., camera for light-scattering meas. 5=229
  - distrib. meas., by charged particle precipitation 9=5230
  - distrib., power law 9=11891
  - electrostatic analyser 6=6999
  - photoelectronic instr. for sizing and counting 5=1280
  - rel. to humidity 9=11613
- smoke in chimney, optical density meas. 7=3119
- stability, by RaD and F content of atmosphere 9=7584
- thermal precipitator, for continuous sampling 8=9130
  - sampling efficiency 8=6431
- tobacco smoke, particle size distrib. 9=7583
  - stable dipole movements 6=7794
- travel and deposition of aerosol clouds 7=1804

Air (See also Atmosphere).
- absorption by liquids, rel. to polarity of liq. 5=3485
- absorption of elastic pulse waves 8=3797
- adsorption in Ge, effect on elec. props. 8=6989-90
- adsorption in low pr. Hg arc 9=9678
- acoustic velocity, -69 to $+19^{\circ}$C 9=5438
  - at high temps. 9=7883
- air nuclei in H_2O, cavitation effects 8=2840
- α-particle energy loss per ion pair 6=3953
- α-radioactivity meas. 6=584

Air - contd
- automatic isokinetic sampling 9=912
- breakdown 7=3316, 6201-2, 6209; 9=2377
  - effect of moisture 7=6203-4
  - microwave frequencies 7=1258; 8=199
  - potential using Maze counter 9=8188
  - pure and with CCl_4 7=6145, 7846
  - rel. to radioactivity 7=9223
  - static, current inc. 8=7062
  - u.h.f., in crossed elec. field 6=2139
  - in uniform field 6=8219
  - various electrodes 7=4390-1
  - voltage, and formation time 5=9677
  - voltage, effect of humidity 9=7020
  - at 9.5 Mc/s 9=1496
  - at 50 c/s and 1-75 mm Hg 7=3312
  - at 1-10 mm Hg 7=5362
- bubbles, solubility in water 7=5105
- CO_2 content det. 7=8251
- centripetal, pump effect 7=8458
- compressed, pos. corona disappearance 6=7448
- compressed, spherical blast study 8=8645
- condensation 7=1229
- condensation nuclei, disappearance in room 5=1404
- cooling, from v. high temp. 8=7861-2
- corona, elec., at high press. and temp. 9=3538
  - in positive point streamer 9=5757
- dielec. strength, compressed air, theory 5=7016
- dissociation and diffusion, kinetic eqs. 9=5427
- dissociation, by shock waves 9=5846
- dry, energy loss per ion pair for protons 9=4908
  - rotational relaxation 9=4374
- effect on charge of transmitted ion beams 8=5986
- elec. discharge, air—argon, air—argon—alcohol 8=8796
  - h.p., space-charge field emission, Hayashi data 9=7032
  - l.p., double-cathode effect 8=8003
  - l.f., starting potentials 9=5765
- electron attachment 9=12398
  - cross-section 8=2370
  - slow electron 9=2452
- electrons, elastic scattering, by N and O 8=3185
  - loss cross-section for He atomic beam 5=8053
  - and positions, energy loss and range, tables 6=8236
  - slowing down, energy spectrum calc. 9=5811
- energy per ion pair 5=7153
- eq. of state and high temp., shock-wave study 8=86
- explostion with CH_4, N, A, He, flame propag. 7=1705
- fission fragments range in, rel. to energy 9=774
- flow into l.p. chambers, jet. shape 8=7735
- γ-ray absorption coeff. 9=2563
- intermolecular force constants 7=5504
- internal energy—compressibility—temperature eq. for air in dissociative and ionic equilibrium 9=5642
- ionization, near α- and β- sources 9=13389
  - by α-particles 7=4501
  - by β-particles 8=8845
  - by blowing snow through it 5=5152
  - in cavities, by X- or γ-rays 8=6003
  - energy 7=1415
  - by H^+ and H_2^+, secondary ions composition 9=11153
  - humid, secondary 9=13390
  - by Li^7 ions 8=1744
  - microwave conductivity 9=12403
  - photoionization 8=4083
  - by shock waves 8=3196; 9=5846

- vapours, atomic orientation by optical pumping 8=9079
  - optical detection of paramag. resonance 8=6349

Alkali metal compounds (See also the compounds of the individual metals).
- antimonides, n- and p-type conduction 9=2326
- borohydindes, order—disorder transitions 6=1752
- carbonates in Ni matrix cathode 8=3206
- chlorides, Mn++ in, electron spin resonance 9=4823-4
  - vapours, polymer abundance 8=7757
- phosphors, charge balance and stability 9=13944
- fluorides, gaseous, polymeric species 9=6214-15
  - luminescence 7=1194
  - vapours, molecular composition 9=6212
- halides, absorption inF-band to M-band region 6=5529
  - absorption spectra and intrinsic photocond. 9=5718
  - activated, electron-acceptor levels 9=9467
  - β-band absorption 9=1300
  - cathode-luminescence 6=8698
  - chem. effects assoc. with colour centres 5=8394
  - colour centres 5=5730; 8=5484
  - colour centres, double spin resonance 9=12800
  - colour centres, electron microscope study 9=10234
  - colour centres from irradiation by protons and α-rays
  - colour centres, pressure effects 5=6617 [5=5719
  - colour centres, radiation-induced, mech. 5=3265
  - colour centres, rel. to pressure up to 50000 atmos.
  - colour centres, review 7=8940; 9=809 [9=8857
  - containing NO_2^- ions, colour centres 5=6620
  - crystal defects, luminescence and elec. conduct. 6=5013
  - crystals, electron microscope study of X-ray and u.v. effects 9=13836
  - crystals, nitrate-doped, cavity formation 9=4016
  - crystals, props., survey 5=8383
  - Debye characteristic temp. from elastic consts. 9=6264
  - decorating dislocations, method 7=9973
  - deformation of electron distrib. of ions in crystals 7=1736
  - deformed, transient inc. in elec. cond. 9=288
  - dielec. consts., theory 9=4542
  - dielec. consts., 100 kc/s-20 Mc/s, temp. dep. 9=5655
  - dielec. losses 9=13248
  - dielec. losses rel. to structure 9=9588
  - dielec. strength and deformation 6=5849
  - dielec. strength rel. to chem. stability 5=7001
  - diffusion consts. 6=8979
  - dislocation etch techniques, etchants 9=9010
  - distribution of activators 8=3559
  - edge energies in crystals 5=9251
  - elastic constants 9=4075
  - elastic constants, polycrystalline halides 5=5672
  - elastic constants, temp. dep. 8=8484
  - elec. breakdown, crystals 9=13350
  - elec. breakdown, directional 5=7090
  - elec. breakdown, high-temp. 7=8651
  - breakdown voltage, rel. to crystal parameters 7=9151
  - elec. strength and surface condition 7=1351
  - electron—lattice interact. 6=1733-4
  - electron traps due to plastic flow 5=5086
  - epitaxial growth of metal films, theory 9=9007
  - equilib. defect interactions 5=8384
  - evaporation into vacuum 9=5623
  - exciton, diffusion 6=7565
  - exciton, many-electron theory 9=10244
  - exciton model 8=805
  - exciton, moving, electronic structure 9=6255
  - exo-electron emission 9=8204
  - F-band constants 6=4084
  - F-centres 6=3362, 7820
  - F-centres and thermoluminescence 9=9497-8
  - F-centres, bleaching 5=8395
  - F-centres, electron transition theory 5=4182
  - F-centres, fluorescence, quantum yield, calc. 9=10807
  - F-centres in pure and hydride-containing crystals 5=3272
  - F-centres, susceptibility and entropy 6=3702
  - field emission from metals in contact 6=4436
  - films condensed at low temp., structure 9=5260
  - films evap. on to single crystal 8=456
  - gaseous, complex ions, dissociation energies 9=6217
  - gaseous, energy of dimer formation 9=5122
  - gaseous, entropy and energy of dimerization 9=6213
  - gaseous, polymeric molecules 8=8630
  - hardening by deuteron irrad. 9=6292

Alkali metal compounds - contd
  - In activated absorption and luminescence 9=10833
  - In activated, luminescence decay 9=9476
  - interaction between equilibrium defects 8=6412

  - luminescence of F-centres 5=859
  - luminescence, X-ray-induced 5=4558
  - mixed, dislocation densities 9=8812
  - molten, e.m.f.'s 6=8215
  - molten solns., structure 9=1298
  - Ni activated, X-ray irrad. effects on absorption and luminescence spectra 9=9484
  - optical absorption 7=257
  - optical absorption by F-centres 9=1877
  - optical props. 7=9106
  - phosphors, absorption and luminescence centres 8=4872
  - phosphors, Ag-activated, excit. spectra 5=6943
  - phosphors, growth 9=8996
  - phosphors, luminescence mechanism 8=979
  - phosphors, preparation 6=9027
  - photochem. coloration, H^- ion sensitization 5=7513
  - photocond. crystals, capac. and conductance effects
  - photoelastic consts., rel. to temp. 9=230 [5=2766
  - photoelectric effects in vacuum u.v. 9=6997
  - photoemission from metals in contact 6=3746
  - polarized luminescence 6=7298
  - polymerization 8=6843
  - quantum yield 9=11569
  - radiationless transitions in F-centres 9=7520
  - refractive index rel. to lattice energy 7=4121
  - screw dislocations, elastic theory 9=8814
  - secondary electron emission 9=12361
  - semicond. props. (students' expt.) 7=6167
  - sensitized crystal X-ray coloration 5=626
  - single crystals, mech. deform. electrical effects 6=1254
  - in solution, colour centres 5=8393
  - solutions, crystallization temp. 5=5263
  - specific heats, calc. 9=13236
  - stress effect on elec. strength 5=9634
  - surface energies 7=7493
  - surface energy, surface distortion contrib. 9=8874
  - thermal expansion 7=310, 8558
  - thermodynamic props. 8=914
  - thermoluminescence 6=2806; 8=2992
  - Tl activated, luminescence decay 9=9476
  - transformations of colour centres 6=7821
  - transformations of F- and Z_2- centres 9=5158
  - transient pressure effect on elec. cond. 9=9670 [9=6993
  - trapping of photoelectrons around dislocation lines
  - U-centres, wave-functions from point-ion-lattice approx. 9=5159
  - uncoloured, electronic conduction ? 6=354
  - V-centres in evap. films 6=3361
  - vapours, molecular composition 7=1970
  - wetting, pairs of crystals in contact 8=6906
  - X-ray coloration, mech. 5=5088
  - X-ray coloration of compressed pellets 8=3466
  - X-ray coloured, dielec. breakdown 6=6681
- hydroxides, thin cryst. samples for i.r. study 9=2210
  - vapours, dimer formation 9=12758
- intermetallic semiconductors, Sb and Au 9=6938, 12258
- nitrates, ultrasonic velocities through liquid 7=9030
- sulphides, thermoluminescence, effect of ageing 8=2990
- type MB_6, electron distrib. and energy bands 9=6246
- vanadates, luminescence 7=7017

Alkaline earth metals (See also the individual metals).
- activation of oxide cathodes 8=643

Alkaline earth compounds (See also the compounds of the individual metals).
- elec. cond. at high temp., rel. to lattice energy 9=9596
- superconducting intermetallic compds. 7=9699 [9=9693
- (BaSr) O cathodes, photo-emission, spectral sensitivity
- carbonates, effect of structure on light oscillations 9=9501
  - in sintered cathodes 6=5189-90 [9=13769
- chalcogenides, crystals, lattice energies and other props.
- fluorides, luminescence 7=1194

Alkaline earth compounds - contd
- germanates, fluorescence 9=12095
- halides, h.c. dielec. losses, rel. to lattice energy 9=9590
  - molten, surface tension 8=7738
  - refractive index rel. to lattice energy 7=4121
- hexaborides, work function 9=11094
- metaniobates, dielec. and piezoelec. props. 9=9587
- oxides, dissociation by electron bomb. 7=6668
  - energy of ionization of Eu^{2+} in 9=4759 [9=9689
  - evaporation from oxide cathode, flame-photometric study
  - h.f. dielec. losses rel. to lattice energy 9=9590
  - refractive index rel. to lattice energy 7=4121
  - in sintered cathodes 6=5190
- sulphides, energy of ionization of Eu^{2+} in 9=4759

Allotropes (See Phase transformations).

Alloys (See also Crystal structure, atomic, alloys; Steel).
- AB_3, type, zone structure and degree of order 9=8829
- activation energy of diffusion creep 8=8489
- age hardening, directional precipitation 6=1665
- amalgam formation, X-ray diffr. study 7=6670
- annealing of point defects 5=8386
- austenite: pearlite reaction 7=1674
- autoradiography using nuclear emulsions 9=13988
- axial ratio deviations from close-packing value 5=6605
- binary, Brillouin zones, elec. conductivity and K-absorpt. spectra 6=5263-4
  - composition from electron backscattering 6=7463
  - containing foreign atoms, residual resist. 5=6544
  - high pressure effects 7=8231
  - Ising model 7=9256
  - ordered, vacancy diffusion in 8=2674
  - residual resistance, Thomas—Fermi—Dirac method.
  - self-diffusion 7=7448 [6=5272
  - solid solutions, local order, electronic theory 7=1676
  - solidification 6=1157, 7800
  - thermal expansion rel. to order 6=3676
  - thermionic emission of electrons 8=3207
- binding force changes with treatment 8=4407
- cold hardening 5=6559
- compressibility, Vegard's law deviations 5=6541
- conduction band polarization 7=5497
- conduction electrons, inter. with composition fluctuations
- creep, irradiation effects, crit. review 9=6285 [8=8413
  - void nucleation sites 8=8490
- crystal defects, effect on props. 8=5479
- crystal energy levels, effect of alloying 6=515
- crystal plasticity, theory 9=4050
- Curie point, from mag. isotherm data 8=8114
- de Haas-van Alphen effect 6=8284
- diffusion, of atoms 6=2462
  - bibliogr. review 9=6303
  - coeff.,X-ray det. 7=4796
  - Kirkendall, effect of nonequilibrium vacancies 9=7534
  - multicomponent diffusion 9=2947
  - theory for multicomponent systems 9=835-7
- diffusion porosity 7=6723
- diffusionless crystallization 8=5517
- dilute alloys, antiferromag.—ferromag. transition 8=8875
- dislocation slow motion 5=10074
- disordered, binary, lattice vibrations, extreme frequencies
  - dielectric, thermal conductivity 9=2262 [9=8817
  - energy levels 5=2917; 7=1474
  - forbidden and allowed bands 5=7038
  - one-dimens. chains, electronic struct. 5=410
- elastic const. det. by X-ray scatt. 7=796
- electrical conductivity, calc. 8=7898
  - Nordheim theory examined 8=3985
  - theory for mechanical mixtures 9=5670
- electrical resistance, of base metal, effect of alloying,
  - rel. to temp. 9=286
  - meas., high temp. 5=286
  - dilute alloys 5=6124
  - residual 8=4950, 7895
  - theories, survey 8=6954
- electron emission during changes of state 6=5917
- electronic structure 9=4013
- electronic susceptibility 5=1998
- energy-levels of inner electronic shells 7=3472
- f.c.c., with deformation faults, X-ray diffraction 9=13912
- ferromagnetic, atomic mag. moments 7=1435-6, 1524
  - Barkhausen discontinuities study 5=201
  - chem. reactivity at Curie point 6=4710

Alloys - contd
  - dilute, properties 5=6297
  - Hall effect theory 6=8868
  - homogeneous, initial susceptibility 8=7172
  - Hopkinson effect disappearance 5=9769
  - Jordan hysteresis const. rel. to permeability 5=2011
  - low temp. ferromagnetism 7=6335
  - magnetic props. and structure 8=1281
  - magnetization curves, deviations 6=2232
  - magnetostriction 7=6355
  - magnetostriction temp. rel. 5=4789

Ga arseno-selnides 7=4804
Ga—In, optical reflectivity 7=2073
Ga—Ni, equilib. diag., revision for new alloy 8=6437
GaV$_3$, nuclear resonance shifts 9=2955
GaAs—InAs 7=5671
Gd—La, magnetic properties 8=6042
superconductivity v. ferromagnetism 9=12302
Gd—Y, magnetic props. 8=6042
Ge, valency and atomic size 6=7745
Ge—In, alloying process, effect of edge dislocations 8=8437
p—n—p junctions, metallography 9=859
p$^+$n junctions, reverse breakdown 9=2336
Ge—Rh system, X-ray and metallographic study 7=6636
Ge—Sb, distribution of Sb 8=9142
Ge—Se, thermal cond. and thermoelec. power 9=2259
Ge—Si, conduction band structure 7=2223
electron mobility 8=1687, 5888
galvanomagnetic effects 6=5860; 9=10994
liquid, elec. conductivity 7=2224*
optical absorption 8=8687
optical absorption edge, 1-7000 kg/cm^2 9=7964
pressure dependence of properties 9=5699
splluttering, by inert-gas ions 8=8823
Heusler alloys, magnetic properties 9=8312
Hg—In optical reflectivity 7=2073
volume change on formation 7=9424
Hg—Mg, Hg vapour press. 7=318
Hg—Tl, optical reflectivity 7=2073
Hipernik wires, plastically deformed, coercive force rel.
to initial susceptibility 9=8296
In—Li, lattice spacings 8=1339
In—Mg, lattice spacings 8=1339 [9=8083
In—Pb, deviation from Matthiessen's rule, rel. to conc.
press. dependence of resistivity, strength etc. 5=1855
thermoelec. power 9=3523
thermoelec. power, structure anal. 8=7046
In—Sn, superconductivity transitions 6=7430
superconductivity, trapped flux 5=6153
thermal cond. at low temp. 8=2271
In-Th, thermoelec. power 9=3523
In—Tl, thermal conductivity, low-temp. 5=3667
thermal cond., normal and superconducting 6=2030
InSb—GaSb, optical and elec. props. 8=7931
Ir—Re, use in thermocouples 6=2838
Ir—Sb, phase diagram 7=9932
K—Na, equilib. diagram 6=4039
heat transfer with liq. 5=8687
liquid, magnetic susceptibility 8=7167
optical consts. 9=7970
X-ray scattering calc. 7=146
La, superconductivity 8=1710
superconducting, transition temp. 9=11041
Li—Mg, elec. resist. below 10° 7=7856
press.-dependence of resistivity, strength etc. 5=1855
Li—Si, solubility of Li 7=781 [5=1855
Li-Sn, press.-dependence of resistivity, strength etc.
Magniko permanent magnets, heat treatment 8=8118
Mg, dilute binary, lattice mechanics 7=3755
dilute, elec. resist. 5=6125
dilute, lattice consts. and Brillouin zone overlap 7=3473
dilute, thermoelec. power 7=9703
porosity detection, with Pd^{109} in paraffin 9=4055
secondary emitters 9=11108
shear const. calc. 7=2460
shear-wave attenuation 9=11919
unusual bonding, theory 6=1413
Mg—Mn, u.s. absorption, 5 - 180 Mc/s 8=3818
Mg—Pb, precipitation process 5=4118
Mg—Sb, films, transparency and elec. resist. 7=2186
Mg—Si, soft X-ray spectra 5=1879
Mg—Sn, films, transparency and elec. resistance 7=2186
magnetic properties 7=1454
Mg$_2$Sn, prep. and props. 5=9660
MgCu$_2$-MgZn$_2$, electronic susceptibility 5=1998
Mn—Ni, diffusion coeff. of Mg in, rel. to cathodes 9=8880
magnetoresistance at low temp. 8=2339
magnetostriction temp. rel. 5=4789
microwave g-values 8=1315
Mn Kβ-spectrum, rel. to mag. props. 9=12346
mosaic boundary structure 6=5451

    of electron-coupled nucl. spin interactions, applications
    modified treatment, unsat. compds. 5=2969 [9=6200-1
    of molecular structure 5=2059
  valence forces in 3- and 4- membered rings 6=4569
  vector model, modification 7=2785

Bonds - contd
  vinyl halides, quadrupole coupling data 6=2306
  vitamin-A palmitate, i.r. assignment of unsaturation
  Zn blende, cohesive energy 6=6816 [5=1697
  ZnS, theory of piezoelectric effect 9=3429
  Zn family metals, unusual cohesion 6=1413

Bone
  electron slowing down, energy spectrum calc. 9=5811
  human skull, response to mech. vibrations 7=4090
  molecular structure 9=11668
  piezoelectricity 8=4944

Boron
  atomic, electron affinity 6=563
  B, B_2, gaseous, thermodynamic props., 0-6000°K, calc.
  B^{11}, enrichment in KBF_4 decomp. 7=6481 [9=10937
  in cosmic rays 9=7132
  diffusion, in Ge 9=5182
    in groups IV-VI transition metals 7=1668
  electrical props., of polycrystals 9=10986
    of single crystals 8=628
  electrical resistivity 8=2313
  in α-Fe, interstitial soln. 5=1306
    substitutional solution, lattice const. 9=10293
  films, thin, deposition, transmission curves 8=6443
  freq. dispersion of conductivity 6=335
  in graphite, spectrochemical analysis 9=6355
  impurities, mass spectrograph analysis 6=8780
  isotope enrichment by distillation 7=4651
  isotope separation 7=7400; 9=718-19
  isotopic anal. by nuclear reaction 6=1499
  modification, structure 9=10370
  neutrons, thermal, absorpt. cross-sections 5=2218, 4106
  as nuclear-reactor control-rod material 8=7414
  optical properties, of single crystals 9=1327
  pit formation, on crystals, cooled from 2000°C 9=2993
  vitreous, mechanical properties 9=11602
  zone melting 9=10359

Boron compounds (See also Alloys).
  borates, electroluminescence in a.c. and d.c. fields 6=7315
  borax, phase transformation, X-ray study 6=1750
  borazole scintillators 5=5335
  boric acid, photoconductivity 7=407
    X-ray study of thermal expansion 5=9605
  diborane, photodecomposition 8=2054
    reaction with phosphine 6=4058
  metal bordies, type MB_6, electron distrib. and energy bands 9=6246
  metal hexaborides, crystal chemistry 8=3558
  organo-boron scintillators 8=3276 [9=10836
  phosphors, activated, luminescence spectra in decay
  tourmaline, extraordinary ray vibration direction 6=7328
  B—Al semicond. compds., props. 5=1628
  $B_{12}Al$, freq. dispersion of conductivity 6=335
  B—B_2O_3 system, reactions at 1300-1400°K 6=8732
  B carbide suspensions, in u.s. machining 9=13868
  B carbide-Cu disks, in neutron thermopole 8=5165
  B_4C, neutrom-irrad. effect on X-ray scatt. 5=9273
  B_2Cl_4, synthesis in electrodeless discharge 9=898
  B_8Cl_8, identification and structure 9=12879-80
  B_2D_6—B_5H_9 exchange reaction 6=3336
  BF_3, with A, in ionization chambers, effect on counting rate 9=3687
    association with amines 7=3785
    electron mobility 5=917; 8=4091
    gas, use for reactor control 6=1607
    handling system, all-metal 8=2724
    ionization potl. and appearance potl. of BF_2^+ and BF_3^+ 9=5844
    liquid, association 5=5259
    with NH_3, reaction kinetics 9=12850
  BF_4, α-particle energy loss per ion pair 6=3953
  BH, gaseous, thermodynamic props., 0-600°K calc.
  B_5H_9, formation from B_5H_{11} 7=8234 [9=10937
  B_6H_{10}, vapour pressure, mass spectrum 9=8038
  NB, dielectric props. 9=6875
    electroluminescence 6=5023
    electronic structure 5=2915
    friction on Pt 8=821
    irradiation effects 5=5718
    scintillators 5=5335
    2-dimens. vibr. spectrum 6=5522
  B oxide, vitreous, struct. anomaly 6=8421 [9=10937
  BO, B_2O_2, gaseous, thermodynamic props., 0-6000°K, calc.

photoelectronic emission 7=404
photorectifier 7=3289
photoresistors, props. underX-irradiation 8=5921
photosensitive layer prep. by sputtering 5=7971
photovoltaic cell, quantum yield 6=2119
photovoltaic effect 5=1843; 6=2113; 7=7925 [9=9643
photovoltaic effect, longitudinal and transverse fields
in plastic binding, in photocond. cell 6=8800 [5=7965
polycrystall., i.r. irrad. effect on photoconductivity
powder elements, photocurrent decay and gain 9=7000
powder, large-area high-curr. photocond. cells 5=9672
preparation and photoelec. props. 8=7010
recombination processes 5=6149
refractive index 7=5156
refractive index, of microcrystal 5=2634
as S and Se molec. beam detector 8=8404
single crystals, absorpt. and photoconduc. 5=3593
single crystals, controlled conductivity 5=2738
single crystals, growth 9=7596
single crystals, intensity meas. appl., electron crystallography 6=820
single crystals, large, growth 9=1931
single crystals, ohmic contact props. 5=4667
space-charge limited currents 5=4646; 9=1451
spectra, absorption and photocond. 8=5913-4
spectra, absorption, semicond. props. 9=5718
spectra, absorption const., compressibility and pressure displace. 9=4002
spectra, absorption edge, effect of size, surface and deformation 9=5542
spectra, fundamental absorption edge, 90-340°K 9=5535
spectra, optical, and magneto-optical props. of excitons 9=6258
spin resonance of donors 9=8343
surface charges, effect of traps 9=13319
surface photocond., effect of mag. field 8=4023
surface recombination 6=336
temp. effect on photocond. and semicond. props., 20-700°K 5=3749
thermal and intrinsic elec. breakdown 5=3811
thin-layer photo-elements, phys. props. 5=2761
thin layers, photovoltaic effect 8=3131
ultrasound effect on photocond. and fluorescence 5=4467
use in γ-ray detection 7=2606, 6696
in water, blackening by light 6=8449
X- and γ-ray sensitive 7=3342
X-ray detector 9=8201
CdS—CdSe solid solutions, forbidden-band width 8=4006
CdS—metal contacts, electrode and surface props. 8=8777
CdS—ZnS, activated with Pb, Mn, Cu, Bi and Ag, i.r. response 6=8694
Ag activated, fluorescence 8=2248
Ag activated, fluorescence and photocond. 9=12084
Ag and Cu activated, use in xerography 7=9483
Cu activated, luminescence 7=7765-6
electro-enhancement of luminescence 7=4204
luminescence decay, rel. to surface conc. 9=4465
luminescence spectra, rel. to excitation intensity
persistent internal polarization 5=5085 [9=4467
photoconductivity 5=7860
$CdSO_4$ soln., ultrasonic vel. 9=7881
CdSb, diffusion of Zn and Se 9=13807
elec., thermal and mag. props. 8=4007
prep. and elec. props. 7=8615
semiconducting props. 7=5324
thermoelec. cooling elements 9=2367
CdSe, action in Se rectifiers 5=6136
band gap width 5=5421
crystals grown from vapour phase 7=1730
elec. conductivity 5=3748
elec. cond., under X-radiation 8=3141-2
field emission 8=5954

  - irradiated, energy levels 9=10980
  - luminescence, transmission and energy gap 6=5005
  - photoconductivity 8=4030
  - photoconductivity, review 6=2885
  - photovoltaic effect, at h.v. 9=2344
  - preparation and props. 9=8104
  - semiconducting props. 5=940, 3775
  - single crystals, photoconduction threshold 5=959
  - single crystals, prep. and elec. props. 5=9653
  - CdTe—HgTe, preparation and props. 9=8104
- CdWO$_{41}$, luminescence kinetics 9=12094
- CdZnS:Mn$_1$X X-ray luminescence 9=13177-8
- CdZn sulphide-selenide i.r. response 6=8695-6
- (Cd,Zn) selnides, Ag- and Cu- activated, efficient red phosphors 6=1104

Caesium
- arcs, cathode processes 8=7056
- atomic beam, freq. standard 9=5391
- Cs^{135,137}, nuclear quadrupole moments 9=6056
- $Cs^+ + I_2^-$, ion recombination coeff. 9=1563
- Cs—Sb cathodes, electrical conductivity 6=8794
- Cs—Sr—montmorillonite ion-exchange equilib. 6=1711
- electron energy band calc. 8=392
- evap. layers in Cl$_2$, negative ion emission 8=7104
- films, photoemission 7=7123
- Grüneisen's const. 6=1670
- ionization on Pt and W surfaces 6=8847
- optical orientation of atoms 7=6468
- resonator frequency standard 6=104
- specific heat below 330°K 6=2841
- thermoelec. power, below 1°K 9=2364
- thin targets, electron bombard. effects 8=5056

Caesium compounds
- Cs arsenate, ferroelec., dielec. const. 6=3708
- CsAu, semiconducting props. 9=12258
- Cs—Bi, films, elec. and optical props. 7=9182
  - photocathodes 7=402
- CsBr, decorated dislocations 8=2664
  - dielectric properties 7=5296
  - F-band oscillator strengths 7=4894
  - thermal expansion 7=1223
  - thin films, i.r. transmission 9=12050
- CsCl, aq. soln., dielec. const. 9=2303
  - aq. soln., diffusion coeff. at 25°C 5=1584
  - conductance and thermal transition 6=2859
  - on W, surface ionization, threshold temp. rel. to elec. field 9=5855
- CsF, cosine interact, in reson. spectrum 5=6359
  - dil. aq. soln., ion sep. on freezing 6=963
- Cs halides, elec. conduction mechanism 5=9647
  - plastic deformation 7=8223
  - structure change on melting 5=7422
- CsI, density rel. to crystal imperfections 6=103
  - i.r. transmittance and reflectance 9=1326
  - luminescence decay, temp. dependence 9=6761
  - optical props. 6=192
  - phosphor, α-particle response 9=2227
  - prism for i.r. spectrometer 5=9559

Caesium compounds - contd
- CsI:Tl, fluorescence decay time rel. to particle ionization 9=13182
  - fluoresc. decay, under particle bomb. 8=4892
  - fluorescence response to N ions 7=8531
  - luminescence of colour centres 7=4164
  - luminescence under proton, α, C^{12} bomb. 8=8705
  - scintillation props., for u.v. and corpuscular excitation 9=6760
  - scintillation response, for fission fragments 9=490
  - for scintillation spectroscopy 7=9736
- CsMnO$_4$, irradiation effects, accelerated thermal decomposition 9=7582
- CsNO$_3$, specific heat, 50-450°C 8=3957
- Cs—O, photocells 7=402, 406
- Cs$_2$O—Ag cathodes, electron emission 7=2280
  - light transmission and photoelec. yield 9=8208
  - thermionic emission and semicond. props. 8=3208
- Cs$_2$O—Bi photocathodes, light transmission and photoelec. yield 9=8208
- Cs$_2$O—Cs photocathodes, fatigue 9=12356
- CsPbBr$_3$, CsPhCl$_3$, CsPbI$_3$, crystal structure and photocond. 9=2341
- Cs phosphate, ferroelec., dielec. const. 6=3708 [5=6219
- CsSb, electron bombard. effect on secondary emission
  - electron bombard. effect on sec. and photoelec. emission 6=1294
  - Hall effect 5=5521
  - photocathodes 5=298; 7=402, 405-6, 9251
  - photocathodes, improved response 8=191 [9=8208
  - photocathodes, light transmission and photoelec. yield
  - photocathodes, localized level emission 9=334
  - photocathodes, temp. characteristics, -170° to +20°C
  - photoelec. emission fatigue 6=1244 [8=7978
  - structure and elec. props. 7=6187
- Cs—Sb—Rb photocathodes 7=4371
- CsTi alum, paramagnetism 5=2885

Calcium
- atomic-beam source, interference at large retardations
- atomic heat 7=8575 [9=6781
- Ca III ions, abundance in solar corpuscular radn. 5=1461
- in d.c. arc plasma 7=4415 [6=8236
- energy loss and range of electrons and positrons, tables
- films on W cathodes, thermionic emission 8=8852
- flocculi, observed Arcetri (1957) 9=9150
- foil, equilib. charge ratios of emerging protons 5=2803
- heat capacity, 1.8 - 4.2°K 8=599
- interstellar, distrib. 6=3439
- ionization on hot W surfaces 7=503
- liquid, viscosity 8=530
  - viscosity and density 8=3752
- metal, allotropic modifications 6=9048
- spectrophotom. det. in alk. halide crystals 6=5509
- vapour press. of solid 5=242-3

Calcium compounds (See also Alloys).
- thin films, optical absorption 9=5545
- Ca aluminate and tungstate cathodes 9=12351
- Ca anhydrite, from dehydrated gypsum, structure 9=7592
- Ca azides, ionic conductance 5=9214
- Ca borate, phosphors, Ce—Sm activated, emission characteristics 9=13179
  - as u.v. phosphor 9=1306
- CaB$_6$, thermal expansion 8=3558
- CaCO$_3$, chem. effect. of C^{12} (γ,n) C^{11} 7=830
  - induced thermo-luminescence 6=1116
  - Mn^{++} paramag. resonance 6=5235
- CaCO$_3$—H$_2$O system, O isotope fractionation 9=8684
- CaCl$_2$, aq. soln., diffusion coeff. at 25°C 5=1584
  - hydrates, sublimation press. 9=7562
  - solns., Rayleigh scattering of light 6=7324
- CaF$_2$, birefringence 9=10882
  - crystals, Compton effect 8=3170
  - crystals, u.v. transmission 7=6012
  - density rel. to crystal imperfection 6=103
  - dielectric losses and coloration 8=8751
  - dielectric relaxation 8=6949
  - dislocations 7=5729-31
  - double refraction of films 8=1637
  - elastic constants, Born theory calc. 9=1904, 8928
  - elec. conductivity 9=2317
  - electron emission on pos. ion bomb. 7=5408
  - evap. layers, double refraction 7=8545

- Calcium compounds - contd
  - CaF_2, hydrolysis, decoration of disloc. lines 9=917
    - ionic conductivity 7=7860
    - lattice energy 9=13767
    - luminescence and colour centres 7=9625
    - oriented overgrowth on single crystals 6=4075
    - polarized luminescence 6=7298*
    - pressure effect on colour centres 5=6617
    - recoil nuclei in 8=5340
    - reflectivity, vac. u.v. 5=831
    - stopping cross-sections for 50-600 keV protons 6=6723
    - thin films in total reflection zone 5=225
    - u.v. optical const., at low temp. 8=2940
  - $CaF_2:AlF_3$, u.v. luminescence 8=7840
  - $CaF_2:Ce$, absorption and luminescence spectra 9=10785
  - $CaF_2:Eu$, luminescence 8=585
  - $CaF_2:Mn$, thermoluminescence 7=8532
  - $CaF_2:U$, luminescence and absorption 8=133
  - Ca fluoroarsenate, phosphors 7=8528 [5=1855
  - Ca—Mg, resistivity, strength etc., press. dependence
  - $CaMg_2$, electrical resistivity and thermal expansion
  - $CaMoO_4$, luminescence 9=12094 [9=4559
  - CaO, candoluminescence 9=5577, 9366
    - dissociation energy 5=2048
    - dissociation in flames 6=9001
    - layers, F-centre role in conductivity 5=5402
    - phosphors, luminescence 9=7972
    - thermionic properties 8=6008
    - u.v. and i.r. photocond. 8=4021
  - $CaO—BaO—TiO_2$, ferroelec. props. 9=8074
  - $Ca_3(PO_4)_2$: Cu, luminescence centres 9=12096
  - CaS:Cu, luminescence, effect of flux 8=2973
    - X-irrad. effect on dielec. const. 6=8171
  - CaS—SrS, phosphor, det. of ultrasonics 7=7695
  - $CaSO_4.2H_2O$, decomp. in electron microscope 6=4726
  - $CaSO_4:Mn$, exo-electron emission and luminescence
    - thermoluminescence 9=9496, 10856 [9=4688
    - use in dosimetry 7=2592
  - $CaSO_4:Sm$, as thermoluminescent system 6=2004
  - $Ca(SbO_3)_2$, Mn, Bi and activated, luminescence 9=2231
    - photoconductivity 7=395
  - $CaSiO_3:Mn$, Pb, luminescence 5=6029
    - luminescence, vac. u.v. irradiation 9=7973
    - structure rel. to luminescence 6=1095
  - Ca silicate tungstates, fluorescent props. 8=2978
  - Ca_2Sr propionate, ferroelec. props. 8=1673
  - $(Ca,Sr)(Ti,Zr)O_3$, solid solutions, structure and ferroelec. props. 9=1418
  - Ca stannates, dielec. const. and loss, 10^2-10^6 c/s, -200° to +400°C 9=6884
  - $CaTiO_3$, ϵ and tan σ 6=8162
    - synthetic crystal, elec. and optical props. 9=275
  - $CaTiO_3—Be_2O_3—TiO_2$, dielectric properties 9=13252
  - (Ca,Ba,Sr) titanate, diel. const. and spec. heat 7=5285
  - $(Ca,Pb)TiO_3$, ferroelectric props. 7=7849
  - $CaWO_4$, cathodoluminescence, square-wave excitation, short-time afterglow 9=6768
    - efficiency for X-ray intensifying screens 6=5016
    - fluorescence 7=7016
    - luminescence 9=12094
    - mixed phosphors 7=6019
    - optical and elec. props. 8=1703
    - photoconductivity 5=3782
    - scintillation charac. 5=857
    - synthesis 8=3560
  - $CaWO_4—CaSiO_3$, luminescence 8=6866
  - calcite, birefringence 9=8008
    - etch pits on cleavage faces 9=9011
    - group velocity of light 5=817
    - paramagnetic resonance lines, inversion 9=5916
    - thermal expansion 5=9606
    - thermoluminescence 9=1323, 3337
    - thermoluminescence, mechanically activated 8=3898
    - total reflection, intersecting curves 9=3359
    - transition layer in twinning 6=7006
    - twinning 9=2985
    - X-ray transmission, anomalous 5=3279
  - Chabazite, dielectric properties 9=13244
  - colemanite $(CaB_3O_4(OH)_3.H_2O)$, ferroelec. props. 9=8069
  - fluorite, colour centres 9=811 [6=8685
    - colour centres, electron emission and luminescence
    - etching triangular pits 9=2992

- Calcium compounds - contd
    - Eu-activated, luminescence 6=8112
    - optically active films 9=12158
    - X-irradiation effects 9=8853
  - fluorospar, elastic waves in, elec. polarization 8=6733
    - structure of thin films 8=813
    - thermoluminescence, rel. to treatment 8=5800
    - windows, polishing of 8=1007
  - grossularite garnet, thermal expansion 7=7056
  - Iceland spar, Raman spectra, temp. depend. 9=9445
  - limestone, age det. from thermoluminescence 6=1116
    - radioactivity due to cosmic rays 9=595
    - thermoluminescence 9=1323
  - lithographic stone, Johnsen—Rahbeck effect and semicond. props. 7=7905
- Calculating apparatus (See also Fourier analysis; X-ray crystallography, calculation apparatus).
  - analogue—digital converters 7=1039
  - binary-decimal converter 6=2605
  - computing plates, for mechanically setting desk calculators 9=981
  - correlation coefficient meas. 7=5792
  - crystal structure factor, electromechanical computer
  - data recording for computers 9=4249 [7=892
  - doublet lenses, automatic computing 6=279 [9=1104
  - dynamic programming, stochastic control processes
  - for Fourier series, automatic summation 8=7608
    - synthesis by numerical methods 9=980
  - grating tangentimeter for differentiation of graphical data 9=3024
  - histogram plotter, semiautomatic 9=13833
  - integrator—differentiator, electronic 9=3025
  - ionosphere absorption, appl. for statistical anal. 8=8541
  - Kepler's equation, soln. for calculating machine 9=10497
  - lens design by, optical merit function 8=3846
  - mark-sensing in optical calc. 8=6793
  - probability generator, electronic 9=11712
  - for r.f. problems in accelerator design 7=2323
  - recorder chart analyser 6=4797
  - scattering phase-shift det., mechanical app. 6=4014
  - sums of products, punched card method 6=4146
  - use of ferrites in construction 7=1407, 7181
  - variable graph 7=3837
  - analogue apparatus (See also Nomograms; Slide rules).
    - for acoustical measurements, electronic correlator 5=4472-3
      - relaxation, electrical simulator 9=1188
      - wall panels, circuit representation 7=4102
    - algebraic equations, for solution of 7=1002
    - algebraic polynomials, analyser for 7=1841
    - for autocorrelation of earth's surface 7=6762
    - autocorrelogram computer 5=684
    - complex quantities, calculator 6=8546
    - correlation coefficient meas. 6=6291
    - for creep and recovery, elec. app. 5=3197 [9=6785
    - diffraction integral evaluation, interference photometer
    - diffusion, in semiconductors, device design 9=12812
    - for Dirichlet's and Neumann's problems 9=10493-4
    - electrical resistance, with graded mesh. 8=1411
    - electrolytic tank, design and applications 7=2153, 7842
      - for elec. props. of emulsions 5=5052
      - modelling 3-dimen. e.m. fields 6=7932
    - e.m. delay line, functions to integrals rel. 5=7619
    - electromechanical computer for eq. $y'' + f(x)y + g(x) = 0$ 6=6288
    - electromechanical synthesizer, fast polynomial soln.
    - electron-beam tube as multiplier 6=4773 [9=7728
    - electron bunching, in linear accelerator 9=9131
    - for electron trajectories study 5=7107
      - automatic tracer 7=2
    - Eller's optical machine, elec. diffraction structure calc. 6=539
    - equipotential line plotter 8=2
    - for extrapolations of sampled data 5=6676
    - the eye, photoelec. analogue 6=8534
    - field distortion in ionization chambers 6=6727 [8=4897
    - filters, elec. and optical, mechanical Smith chart for
    - flow, past regularly-spaced cylinders, elastic strip analogue 9=5398
      - viscous, past evenly-spaced cylinders, applic. textile fibres 9=9292 [5=2458
    - fluid dynamics, for construction of conformal maps

Californium compounds
- No entries

Calorimeters
- adiabatic, automatic bomb type 8=3049
  - automatic shield control 7=7830
  - automatic temp. control 7=9663
  - for heat capacities, 100-500°F 7=2141
  - for heat insulators 8=7877
  - for heats of soln. 5=6093
  - low temperature 9=9566
  - for metals, 50-1000°C 9=8049
  - microcalorimeter for radioactivity meas. 7=8118
  - for meas. energy absorpt. from pile radiation 6=2048
  - for simultaneous det. of spec. ht. and conductivity
  - for solutions 7=333 [8=6928
  - for spec. ht. of polymers 5=8712
  - vacuum, for specific heats, from 100-800°C 7=334
  - vacuum, for volatile and corrosive materials 9=8050
  - 4-15°K, for specific heats 6=8153
  - below 20°K, for specific heats 5=4609
  - 0-100°C, for spec. ht. of liquids 5=3696
  - 30-500°C 8=3955
- bomb calorimeter, elec. calibrated 5=4607
  - high-precision, for heats of combustion 5=5380
  - for v. small samples 5=4608 [5=905
- Bunsen ice-calorimeter, construction and calibration
- Bunsen-type calorimeter 6=6574
- calibration, using Pu oxide needles 9=1389
- Calvet's micro, constants det. 5=6993
  - general theory 5=5377
- combustion calorimeter, precision 5=259
- cryostat for specific heats at low temps. 9=13235
- differential microcalorimeter study of stability 6=299
- for heat capacities up to 1600°C 7=6130
- for heats of mixing 5=906, 5382
  - high-temp. reaction calorimeter 5=3695
- for heats of wetting 9=269
  - semimicrocalorimeter 5=5378
- for ion-beam intensity meas. 7=7967
- isothermal, 27°C 5=5379
  - for γ-rays 9=634
  - for graphite, 1-20°K 9=8054
  - for heat of mixing 7=2140
  - microcalorimeter 6=2047
- low-temp., 10-150°K range 5=2685
  - for liquids 7=6129 [5=1782
- microcalorimeters, for heat effects of long duration
  - for heats of mixing, of binary liquids 9=5632
  - for heats of soln., of inert gases in water 9=9565
  - microwave 5=3910
  - for radium standards comparison 5=3993
  - thermal flux v. time curve 8=3953
- rocking-bomb. for heat of soln. 8=3954
- liq. Sn soln., for ht. of formation of alloys 8=2285
- solution calorimeters, calibration 7=1238
- for specific heat meas., of Bi at low temp. 5=7924
  - of crystals, at low temp. 5=7923
  - of liquids, elec. type 9=8059
- thermistor, microcalorimeter 5=7920
  - for microwave power meas. 6=8885
- Tian—Calvet differential appl. 8=5850
- vacuum, dynamic temp. response 6=5053
  - low-temperature 5=3697
- water flow, for high radiation-flux 8=2284
- Wittig—Huber, for heats of reaction of vapours, up to 700°C 9=12188
- for X-ray beam power meas. 6=6687

Calorimetry (See also Heat of adsorption, etc.; Specific heat).
- adiabtic, automatic temp. regulation and recording 8=1661
  - microcalorimeter, appl. to radium standards comparison 6=5338
- Ag, structural energy 9=8785
- calorimeter shields, automatic adiabatic control 9=8051
- energy stored in cold worked metals 5=5677
- flow, new method 6=1175
- γ-rays, energy absorbed from beam 6=1542
  - flux meas. 8=7232; 9=9928
- granular materials 8=1009
- half-life Po^{210} det. 5=1145

Calorimetry - contd
- heat of bulb breaking in immersion calorimetry 8=6927
- heat-transfer gauge, for shock tubes 9=244
- heat units and temp. scales 6=1172
- of intense pulses of radiant energy 8=3026
- isothermal, elec. thermostat use 5=7918
- lattice spec. hts., low-temp. meas., heat switch 5=6994
- liq. He, method 5=2679
  - below 1^0K 7=3204
- low temp., temp.-wave method for metals 5=4606
- by method of mixtures 6=5054
- photo-heating of Se strip 8=3993
- radioactive materials energy output 6=5341
- spec. ht. of poor thermal conductors, using Calvet microcalorimeter 5=260
- stored energy meas. in Ni powder 7=4815
- thermal meas. of u.s. absorpt., liquids 6=2749-50
- thermal rate-curves, plotting by capacitor method 8=5849
- U^{235} fission fragments, kinetic energy det. 5=7919; 8=6339
- water, absorpt. coeff. for light, calorimetric meas. 9=5551

Cameras
- for aurora, fast operating 7=7530
- drum, rapid closing shutter 6=5592
- electron, for nebular spectra 8=6603
- for eye photography 7=5775
- f/2, for Cassegrain telescopes 7=4971
- framing-disk, high speed 9=1992
- grid framing, ultra-high-speed 6=1685
- high-speed, adaptation to spectrograph 8=5765
- miniature, operation by remote control 7=7531
- moving-plate, for nuclear work 7=7540
- multiple-plate, for electron diffraction 7=3761
- multiple-spark, for dynamic stress anal. 6=7919
- nuclear plate, for ang. distrib. meas. 8=9201
  - gas target 8=3280
- rangefinder without moving parts 5=768
- for recording the whole sky 8=833
- reflex, with 500 mm tele-objective 7=6082
- rotating lens and mirror, for mult. exposures at 14 x 10^4 frames/sec. 9=976
- rotating mirror, theory and design 5=4278
- Schmidt, preparation and testing of mirror 9=12937
  - reflection images 9=3032
- scintillation, for visualizing γ-sources 8=6098
- shutter speeds, calibration 5=5810
- for size distrib. det., aerosols, by light-scattering 5=229
- smear, centrifugal distortion effect 8=5573
- streak, f/2.9 9=6425
- time-lapse cine, driving unit 5=4279
- two-camera system, for free-falling drops meas. 8=2844
- ultra-high-speed cinemicrograph 7=7542-3
- X-ray diffraction 9=9014
- 1000 000 frame per sec. 5=4348

Capillarity (See also Bubbles; Contact angle; Drops; Films, liquid; Foams; Surface tension).
- b.pt. of capillary-condensed water 5=3683
- capillary curve meas. 8=3765
- capillary flow phenomena, theory 6=3530
- flattening, of nearly plane surface 9=6582

   B_2H_6—NO explosions, stoichiometry and spectra 8=9160
   $BaTiO_3$—$SrTiO_3$, solid-state reaction 7=784
   Be atom with H_2 molecule, MO calc. 6=2273
   Be alloys, precipitation-hardening 6=1418
   beryllia and magnesia, stability at high temp. 6=8443
   bimolecular, activation by intramolec. energy transfer?
    pre-exponential factors 7=814 [5=8340
   biological, magnetic susceptometer for Fe in proteins
    8=8857 [6=3334
   Br^{80}, from isomeric trans., with benzene and derivs.

Chemical reactions - contd
   branched chain molecules, degradation 6=5505
   butene-1 isomerization, effect of neutron irradiation on
    catalyst activity 9=13875 [9=7563
   Sec-butyl radicals, activated, unimolecular decomposition
   $C-H_2-C_2H_2$, equilibrium at high temp. 9=8954
   CD_3 radicals with CH_4 and C_2H_6 5=9206
   CH_3 + O, mass spectra invest. 6=2496
   $\frac{1}{2}$ $C_2N_2 \rightleftharpoons CN$, equilibrium const. 6=2843
   CO, formation in CO_2 stored in containers 6=1952
    with N, luminous 7 7730
    with O, slow 8=7578-9
    with O_3 7=8238
   Ca halophosphate preparation 5=3625
   $CaSO_4.2H_2O$, exothermic reaction, thermal analysis 7=6681
   caused by elec. field in octadicyl alcohol 5=9642
   CdS, prod. by coevap. of Cd and S 9=4101
   Cf, separation from U 7=686
   charge-exchange reactions, asymmetric 8=7135
   charge-transfer, in monatomic and diatomic gases 5=6566
   Cl atom reactions, energies and entropies of activation
   coal, coking by electric current 7=1222 [8=8496
   combustion inhibition 7=9942
   conc.—time diagram, displacement of max. 6=2489
   condensation, reverse isotopic effect 6=1681
   conduction—diffusion—reaction, of multicomponent
    systems 8=5854
   conjugated molecules, frontier orbital theory 5=6369
   conjugated systems, atom-stabilization energies 5=5572
   Cu oxide formation, Cu and O diffusion 6=8426
   Cu_2O oxidation at high temp. 5=10026
   Cu_2S reduction by H 7=8236
   sym-cyclopropane-d_2 isomerization 8=7575
   D isotope effect in water vapour—Zn reaction 5=2270
   dichloroethylene, thermal cis—trans isomerization
   Diels—Alder's, free electron treatment 6=749 [7=9943
   diffusion, of reacting species of laminar boundary layer
    theory 6=2701, 3508 [8=5685
   diffusion-controlled reactions, in solids 9=10288
   dimethyl ether pyrolysis 6=7775
   due to ultrasonics 7=2779
   duroquinone, reduction, free radical formation 9=10168
   dyes, formed in thermochromism and photochromism
    photocond. as method of study 7=1304 [6=1717-18
    synthesis using ionizing radn. to produce peroxides
   Eder's solns. radiolysis 5=2281 [6=6231
   electron exchange, selective solvation and dielec.
    saturation 7=5696
   electron transfer, nonequilib. polarization props. 6=4712
   electronically excited molecules, reactivity 8=4383
   energy transport in reacting plasma 8=2045
   equilibrium in complex mixtures 8=4503
   in ethanol—argon G.M. counters 6=5164
   ethyl bromide, pyrolysis, mech. 6=1674-5
    thermodecomp., C^{13} effect 5=3210
   ethylidene radical stability 6=5476
   exchange reactions, nuclear magnetic resonance 9=895
   fast, mechanical activation method 5=5006
    mixing machine study 5=6570
    Na diffusion flame method 5=5011
    potl. surface theory 5=8342
    reaction rate studies 5=5014-36
    relaxation techniques appl., e.q. N_2O_4 dissoc. 5=5008
    sensitive manometer appl. 5=8528
    spectroscopy appl. 5=9558
   Fe—$KMnO_4$ self-sustained 5=1310
   Fe oxides and rocks, effect on magnetization 8=1780
   ferromag. alloys, reactivity, anomaly at Curie point
    6=4710
   in flames, organic substances, spectral study 8=963
   in flows, hydrodynamic, surface reaction 9=88
    supersonic nozzle, with gas mixture 9=7865
   formaldehyde oxidation in gas phase 5=9202
   free radicals det. by mass spectrom. 5=5009
   gases, effect of gaseous ions 5=6564*
    mixtures, at high temp., equilibrium, cluster theory
    molec. ions with gaseous molecules 6=5471 [9=5640
    thermodynamic functions, review 9=10936
    velocity distribution of molecules 9=11914
   Gibert's reciprocal relations 7=8916
   H, with Br, in non-steady state 6=4055
    with Cl 9=8949

Chemical reactions - contd
  H with Cl_2, i.r. chemiluminescence 8=8498
    with NO_2 6=1676
    with O, mass spectra invest. 6=2496
    atomic, with O_2, prod. of OH, HO_2 and H_2O_2 6=2488
    with solid O_2 9=12848
    with O_3, i.r. emission spectrum 7=2006
  H-abstraction, activation energies 7=8235
  H bonding in radical reactions 8=2046
  H film interaction energy rel. to surface potl. 5=6565
  H—D exchange reactions, in fibrous proteins 9=8948
    homogenous 6=4711
    in α-keratin 9=892
  HD, reactor for decomp. to H and D 7=813
  HT—HTO ratio, in atmosphere 9=9064
  Hammett reaction const., press. dep. in heterolytic and homolytic reactions 9=8955
  heterogeneous redox reactions at high temp. 7=9439
  n-hexane, decomp. by electrons and γ-rays 7=6667
  Hg dimethyl vapour pyrolysis 8=4504
  Hg($^3P_1$) with toluene 5=6567
  hydrogenation through metal septa 5=7458
  I and polynuclear aromatic hydrocarbons, charge transfer
  I^{128} with methane 7=4838 [9=8950
  induction period in consecutive reactions 7=4824-5
  and i.r. spectroscopy 8=117
  initiated by gas discharges, mass spectrom. study 5=8339
  intermetallic compd. formation in friction under high press. 7=806
  ion—molecule reactions in radiation chemistry 7=2776
  irreversible, restrictive condition 7=3219
  K and HBr, molecular beam study 5=10029
  KBF_4 decomp., B^{11} enrichment 7=6481
  methane, decomp. in elec. discharge 6=1700
    thermal decomposition 7=5697
    CH_4^+ with CH_4 8=6473
  methyl radicals, with ethyl radicals 8=8495
    with ethylene 9=1920
    with NO 6=751
    photochem. production of labelled radicals 5=1330
    stabilization 5=577
  methylammonium protolysis, in aq. soln. 8=1358
    proton mag. reson. study 6=9004
  methyl bromide photolysis in presence of Hg 5=1332
  $MgO-CaO-SnO_2-TiO_2$, solid-state 5=5393
  $MgO-ZrO_2-TiO_2$, $CaO-ZrO_2-TiO_2$, solid-state 6=6543
  min. spark-ignition energy, effect of initial temp. 6=1687
  molecular collisions, cross-sections 5=6350
  monomolecular, anharmonicity 6=754
  N, activated by elec. discharge 5=6568
    afterglow 8=7442
    atoms, with H_2, CO, NH_3, NO and NO_2 8=3532-3
    $N_2 + O_2$, origin of afterflows 8=7576
  NH_3, α-ray-induced decomp. 7=6666
    synthesis by acoustic irradiation 8=5507
  N oxide equilibria, composition 9=6338
  NO, excitation by active N 8=6472
    formation in explosions, with visible glow 8=6749
    fuel mixtures, spontaneous ignition temp. 8=7583
    thermal decomposition 5=10028
  NO_2 decomp. effect of NO 5=5689
  N_2O, decomp., halogen. catalyzed 6=2499 ; 8=6476
    synthesis by acoustic irradiation 8=5507
  $N_2O_4 \rightleftharpoons 2NO_2$, equilib. in liquid phase 6=4060-1
  Na D-lines in nightlow, lab. study 5=1398
  Na_2NO_3 soln. γ-ray radiolysis, H_2 yield 8=7586
  Ni carbide formation and decomposition 8=8475
  tri-p-nitrophenylmethyl + O, paramag. resonsnace 8=3424
  nitryl chloride formation 9=9572
  nucleophilic substitutions, mech. 6=4709
  O, with Cu, O^{18} isotope effect 6=1680
    atoms, with ethylene 5=9204
    with N oxides, in elec. discharge 9=363
    with var. gases, air afterglow 8=9159
  O_2, and charcoal, free radical formation 7=1717
    photolysis, in solns. of liquid N_2 and CO 9=10350
  O_3, thermal decomposition, gas phase 7=8237
  OH radicals, thermal formation 5=6598
  olefine deuteration, fine structure 5=4146
  organic heterolytic, liq. phase, survey 5=4141
  organic N radicals, combination, opt. and mag. evidence
  oxidation, diffusion effects 5=9981 [6=2521

Chemical reactions - contd
  oxidation—reduction, electron transfer 6=5470; 7=5694
    role of H_2O 6=3333
  oxide cathodes, reduction by methane 5=3855
  paraffin hydrocarbons with ozonised O 6=5469
  para-localization energy, polynuclear hydrocarbons
  during PbS oxidation, rel. to elec. props. 5=3771 [7=2766
  pentaborane-9 from pentaborane-11 7=8234
  periodic precipitation 6=6997
  permanganates, Cs and Rb, thermal decomposition, irradiation effects 9=7582
  perturbation calc., non-orthogonal wave functions 6=936
  γ-picoline and iodine 7=5693
  polyphenyls, reactivity, orbital theory 5=1098
  positronium, in aqueous solns. 9=8446
  potl. energy surfaces, modified bond-eigenfunction calc.
  precipitate growth, diffusion limited 9=13879 [5=10027
  promotion by ionization of gases by fission fragments
  proton affinity of molecules 7=5425 [6=8963
  quantum-mech. quantities for chem. reactivity 5=7450; 7=5532
  quinonoid hydrocarbon $CH_2:C_6H_4:CH_2$, formation mech.
  reacting fluid, flow 7=5909 [5=1308
  reacting mixtures, heat transfer 7=6096
    in isotopic turbulence 8=5688
  relaxation time for reactions behind shock waves 8=6747
  residual conc. of daughter subst. removed by bimolec. reaction 8=9044
  Rochelle salt, dehydration 7=5190
  Ru, as fission product 7=1714
  semiconductors, between carriers and impurities 7=9685
    interactions among defects 6=6635
  semiquinone of benzoquinone, reaction scheme 5=9203
  shock-wave activation, appl. to I_2 dissoc. 5=5007
  silane, thermal decomp., in prep. of Si 9=1463
  silica and water, on fusion 6=6207
  with Sn, white and grey 6=4713
  in solid state 7=6658, 9948
  SrO on W—Ni, Sr prod. 9=840
  stationary state, and entropy prod. 5=2694
  steric inhibition of resonance from σ_R values 8=7452
  study using radioactive isotopes 6=582
  T—CO 5=10030
  thermal balance for sample undergoing decomp. 7=8250
  thermal conductivity of reacting gases 7=7810
  on thoriated cathodes 5=2266
  $TiO_2 + 4HCl$ 5=8716
  u.s. microstreaming, applied to surface reaction 9=7904
  unstable species study, matrix isolation method 5=2581
  van't Hoff reaction isobars, appl. to molec. compds. 6=6225
  o-, p- and m-xylyl radicals, thermal stability 5=4142
Chemical structure (See also Bonds).
  binary compds., paramag. invest. 5=7267-8
  σ bond susceptibility calc. 6=774
  Kerr effect, electro-optic 9=1427
    for polar molecules 8=1038
  liquids, rel. to ht. of vaporization 8=8739
    viscosity—structure relationship 7=9031
  long chain molecule opt. anisotropy shape dependence
  by mass spectrometer analysis 9=3604 [5=611
  meson capture in chem. compounds 7=4637
  molecular conc. rel. to phys. props. of crystals 7=4844
  nuclear and chemical stability numbers, relationships.
  nuclear mag. resonance, chem. shifts 7=6460-1 [9=8395
  paramag. resonance line widths 6=7532
  physical chem. textbook 5=5682
  polar liquids, dielec. const. 5=3708
  quantum chemistry, review 7=5535
  acetylenic hydrocarbons, susceptibility calc. 6=5508
  acids and esters, diamagnetism 5=4158
  aldehydes and ketons, diamagnetism 5=4159-60
  alcohols, rel. to ultrasonic absorption 9=3233
  6 aliphatic alcohols, refractometric study 7=2788
  alkyl benzenes, relative basicity 7=3803
  allene hydrocarbons, susceptibility calc. 6=8457
  aromatic molecules, sterically hindered, resonance
  $As_2Se_3-As_2Te_3$, elec. props. 8=1048 [8=3416
  Au in KOH, deep blue colour 7=839
  bianthrone, identity of green form 9=8755
  boron trioxide, liq., viscous flow 6=4870
  Co_3O_4, paramag. susceptibility 7=1718
  collagen, X-ray evidence 8=3590

Chemical structure - contd
  compounds with NiAs structure, elec. props. 7=9692
  Cu salts and Cu coordination compds. 8=8860
  deutero-paraffins, double-maxima distribution 7=1715
  dyes formed in thermochromism and photochromism 6=1717-18
  ethylenic hydrocarbons, liquid, mag. rotary powers, temp. var. 5=610
    susceptibility, molec. orbital calc. 6=5507
  ferrites, Co substituted, controlled properties 7=8011
    resonance in waveguides 7=1471
    in solid solutions, mag. props. 7=5463
    and other magnetic oxides 7=5715
  halogens and halides, b.pt. and phys. props. 7=3801-2
  hydrocarbons, alternant, rotary dispersion calc. 7=4849
    gases, elec. strength 7=2265
    high molec. wt., compressibility data 9=1121
    high molec. wt., viscosity relations 9=1123
    liquid, elec. strength 6=6680
    saturated, gases, elec. strength 7=2266
    saturated, liquids, rel. to elec. strength 5=2779
    unsaturated gases, rel. to elec. strength 8=200
  $KMgCrO_8 . 7\frac{1}{2} H_2O$ and K_3CrO_8, susceptibilities, rel. to Cr valency 6=2243
  $LaMn_{1-x}Ni_xO_{3+\lambda}$ 9=428
  methylene group diamagnetism 6=1719
  Mn—Fe spinels, ion valences 9=426
  MnSb—CrSb, mag. props. 7=3437
  Ni oxide, thermoelec. impurities effect 5=2769
  Ni—Zn ferrite, effect of Co 8=8907
  nitrobenzene derivs., u.v. absorpt. study 5=183
  olefin sulphuric acid systems, colour 6=9024
  organic glasses, and internal friction 9=6318
  organic liquids, homologous series, u.s. absorption 9=2170
  organic molecs., susceptibility and mag. anisotropy 7=6678
  organic N radicals, absorption and paramag. suscept. temp. dep. 6=2521
  organic scintillators 6=3635
  n-paraffins, spec. ht., empirical calc. 6=8745
  perchlorethylene, refractometric study 7=2787
  phosphors, spectral emission, influence of activator environment 7=9637
  polyethylene, irradiation effects 7=3746
  polyethylene glycols, microwave dielec. props. 8=165
  polypeptides, dielec. props. 9=6878-9
  Rice's blue material (HN_3 decomposition product) 9=7466
  S, liquid and amorphous 7=8452-3
  semiconductors, intermetallic, stoichiometry 6=8180;
    zinc blende type, activation energies 9=11027 [7=3254
  silica, vitreous, i.r. absorption band, OH groups attrib.
  silicates, molten, viscosity 5=775 [5=179
  sugar charcoals, paramag. resonance 7=5714
  sugar solutions, molecular sound velocity 7=7682
  tetra-n-alkyl-germanes, Ge susceptibility rel. to n 5=8374
  transition metal compds, thermodynamic props. interpet. 6=8456
  U(IV) compounds, susceptibilities 6=775; 8=1279
  U chlorides, susceptibilities 7=2408
  UH_3, nonstoichiometry and lattice defects 8=2626
  $ZnCo_2O_4$, paramag. susceptibility 7=1718
Chemical technology

- optical consts., meas. by Kravets' method 9=12137
- paramagnetic resonance, in CeMgNo$_3$ 9=2935
  - of Co^{++} in corundum 9=12475
- particle size by magnetic measurement 9=6301
- powder, coercive force 8=4127
- resistivity, at low temp. 7=7857
- rondel, magnetostriction 9=4785
- in Si, segregation coeff. 8=5514
- single crystals, production at high temp. 9=5250

Cobalt - contd
  specific heat, hyperfine coupling 8=2286
  spectral emissivity, temp. variation 6=4967
  sputtering near threshold 6=5125
  structure, changes due to grinding 5=8412
  thermoelec. power, w.r.t. Ag 9=11064
    of films 7=9206
  Weiss—Heisenberg domains, min. size 6=463
  X-ray absorption spectra 8=8021
Cobalt compounds (See also Alloys).
  chem. binding study, X-ray spectrum method 6=6682
  complex ions, mag. susceptibility 9=12446
  crystal structure, refractometric det. 8=3553
  CoAl, mech. props. rel. to crystal parameters 7=9423
  Co_2Al_5 and Co_4Al_{13}, paramagnetism 7=1451
  Co ammonium Tutton salt, mag. anisotropy 6=7359, 7517
  $CoBr_2$, magnetic ordering 9=4784
    magnetic susceptibility 8=3245
  $CoCO_3$, mag. susceptibility 7=3435
    "weak" ferromagnetism 8=3224
    weak ferromagnetism, thermodynamic theory 9=8286
  Co II chloride as visual ultrasonic detector 5=6842
  $CoCl_2$, magnetic ordering 9=4784
    magnetic props. 6=3001-2
    magnetic susceptibility 7=4545
    susceptibility dep, on water content 9=13420
  $CoCl_2.H_2O$, paramag. susceptibility 8=1132
  $CoCl_3$, Faraday effect and electron spin resonance 7=1487
  Co—cobaltous oxide, magnetic anisotropy 6=7513
  $CoCr_2O_4$, diffusion of Co and Cr 8=9134
  CoF_2, effect of Co^{59} h.f.s. on F^{19} nuclear magnetic
    resonance 9=9840
    entropy and heat capac. rel. to antiferromag. 6=301
    mag. anisotropy calc. 6=3816
    nuclear mag. resonance 7=6459
    para- and antiferromag. states 6 =1360
    structure and mag. props. 8=2409; 8=6045
    thermal anomalies rel. to antiferromag. 6=1178
  CoF_3, antiferromagnetic props. 9=5899
  $CoFe_{2-t}Cr_tO_4 (O< t <2)$, mag. props. 9=9789
  Co—Fe NH_4 Tutton salts, paramagnetic relaxation 8=3252
  $CoFe_2O_4$, semicond. properties 9=8102
  Co ferrites, controlled properties 7=8011
    ferromagnetic resonance 8=8916
    heat treatment in mag. field 6=6774
    heat treatment, neutron diffraction obs. 6=5225
    magnetic anisotropy 8=2405
    magnetization process in single crystal 9=456
    magnetostriction and permeability 5=8906
  Co—ferrous ferrites, directional ordering 7=7233
  CoMn ferrite, ferromag. anisotropic resonance 7=3446
  CoNi ferrite, magnetic and magnetomech. props.
    magnetic resonances 9=423 [8=2405, 8143
    resonance widths 6=3823
  CoZn ferrite, anisotropy due to mag. annealing 6=6008
    heat treatment in mag. field 6=6774
    low temp. spontaneous magnetization 8=8130
  CoI_2, mag. susceptibility 8=3245
  Co magnetite, magnetic anisotropy 7=5465
    magnetic annealing 8=8905
    magneto-crystalline anisotropy 6=8275
  $CoMnO_3$, ferromag. moment 9=8291
    structure and mag. props. 9=8290
  $Co_{3-x}Mn_xO_4$, crystallographic and magnetic props. 9=8323
  $Co(NH_4)_2(So_4)_26H_2O$, orientation of Co^{60} 9=12462
  Co oxides, magnetic properties 7=1441-2
  CoO, antiferromag. structure 9=444
    critical magnetic scattering of neutrons 8=6030
    with Li semicond. props. 7=5333
    magnetic susceptibility 5=8078;7=2424
    specific heat 8=6931
  CoO—MgO, thermomagnetic props. 7=4538
  CoO—MnO—O, prep. and props. 7=8616 [5=637
  CoO—Mn O , mixed oxides, latt. const. and elec. resist.
  Co and Ni binary oxide, resist. rel. to struct. 5=3721
  CoO—NiO, solid solns., oxygen conc., temp. depend.
    thermomagnetic props. 7=4538 [9=10296
  Co_3O_4, structure and magnetic props. 7=1718
  Co sulphides, magnetic properties 7=1441-2
  CoS and CoS_2, valency binding studies 6=7267-8
  cobaltous sulphates, paramag. relaxation 6=7533
  $CoSO_4$, antiferromag. susceptibility 7=538

Cobalt compounds - contd
  $CoSO_4$, u.s. absorption, at 3 Mc/s 9=1200
    u.s. velocity 9=7881
  $Co_2(SO_4)_3$, aq. soln., relaxation processes 5=128
  $Co_2(SO_4)_3 + 7H_2O$, paramag. susceptibility, in weak fields
  $CoSb_2$ and $CoSb_3$, semicond. props. 8=4967-8 [9=5870
  CoSi, elec. cond. and thermoelec. power, rel. to temp.
    valency binding studies 5=7267-8 [8=5871
  CoTe, ferromagnetism rel. to struct 6=5221
  $CoTiO_3—\alpha Fe_2O_3$, solid solutions 9=11594
  Sr cobaltites, mag. props. 8=8129
Cold working (See also Plastic deformation; Slip; Work
    hardening).
  dimensional alterations 9=13862

    effect on elec. resistance 7=3308; 8=172, 6952; 9=1429
    effect on internal friction 6=8434; 8=1345; 9=2970
    effect on self-diffusion 6=8425
    effect on thermoelec. power 7=1315, 3308, 7931
    effect on transport props. at low temp. 9=13228
    at low temp., elec. props. 5=2726
    low-temp. stored-energy release 7=2753
    rolled sheet, nuclear magnetic resonance 9=9845
    twinning mechanism 8=4517
    X-ray and neutron scatt. studies 8=4487, 7544
  Cu dilute alloys, effect on resistivity 9=5672
  Fe, invest. by Bitter—Akulov colloid tech. 5=8323
  Fe—Al alloys, structure changes and mag. props. 9=8897
  Fe—Ni alloys, hardening 6=5460 [9=8875
  Fe—Si, cold-rolled and annealed, grain orientation det.
  ferromag. matls., thermal expansion anisotropy effect
    5=4788
  metals, b.c.c., deformation faults, X-ray study 9=865
    dislocation densities 6=2548
    double Bragg X-ray scattering 9=7554
    effect onX-ray sczttering 8=6510; 9=6372
    small-angle neutron scattering 7=9431
  Mg, effect on internal friction 9=2970
  Mo, X-ray study 9=1909
  Mo, permalloy tape, crystal orientation 9=916
  Na, effect on elec. resist. 6=5086
  Ni, effect on elec. cond. 8=6952
  Pb, crystals, effect on ultrasonic echoes 5=1613
    recovery after rolling in liquid air 8=3524
  Pt, effect on thermoelec. and elec. props. 7=3308-9

Cold working - contd
Pt_3Fe, effect on magnetic props. 8=4140
Si, distorted layers produced by grinding 8=5503
steel, effect on torsion modulus 5=9179
  transformer, effect of "collective" recrystallization on texture 9=11220
superconductors, effect on transition temperature 9=12303
Ti, texture and mag. anisotropy 6=5231
Zn foil, surface defects meas. by low-angle X-ray scattering 6=7750
Zr, effect on elec. cond. 9=1429
Collections of physical data (Only comprehensive works of reference are listed here).
α-disintegration energies, heavy elements 5=2101
atomic constants and conversion factors 6=2330
atomic mass differences, experimental, tables 5=2102
atomic masses computed from nuclear reactions 5=6404-6
β-disintegration, total energies 5=2098
cloud-chambers photographs, atlas 5=5505 [8=2410
diamagnetism, paramagnetism, paramagnetic relaxation
diatomic molec. vibr. transition probabilities, astrophys. interest 5=8122
dielectric dispersion of liquids and solutions 9=1410
dielectrics, annual digest 7=9152-3
Earth satellite, seasonal illumination 9=3072
electron parameters, tables 7=5371
electron—photon showers, tables 8=6122
electron-repulsion and overlap integrals, from Slater orbitals 9=1830
"elementary" particles, tables of props. 7=72
energy levels, atomi 9=8669-70
  light nuclei 9=10032
  light nuclei, up to Nov. (1954) 5=7273
  nuclei with 2 from 77 to 84 8=6223
  rigid asymmetric rotor 6=1425
energy loss and range of electrons and positrons 6=8236;
handbook of chem. and phys. (book) 6=4794 [9=343
He^3 9=6849
ionization energies, atoms and atomic ions 5=3851
ionization potentials of 89 molecules 7=5418
isotopes, radioactive and stable 8=9027
Kodaikanal Observatory data 8=13
length interferometry, wavelength data 8=7845
meteor ionizing efficiency 8=3647
Mie scattering coefficients 8=142, 5817
neutron and X-ray props. for diffract. studies 6=822
neutrons, thermal, cross-sections, resonances and diffusion 8=7252
niobium data manual 9=6481
nuclear emulsions, properties 9=14010
nuclear moment tables (up to Sept. 1954) 6=1473
nuclides, trilinear chart 7=5540
one-electron energies, atoms, molecules, solids 5=6400
optical constants, table for calculation 7=1991
π-mesons 7=9406
polarized $BaTiO_3$ ceramics, elastic, piezoelec. and dielec. const. 6=4379
radiative opacities, some gas mixtures 5=7804
radiative transitions in light elements 6=2369
radionuclides with γ-ray emission 8=7350
sessile drop calc., in surface tension 9=9298
solar spectrum, 2/8-23.7μ, photometric atlas 6=4159
sound vel. and absorpt., h.f., mammalian tissues 6=1913
sound velocity in water 8=2896; 9=2160
thermal conductivity of metals and alloys at low temp.
thermo-bimetals 6=1152 [5=2658
thermodynamic and transport props. of 8 gases 8=3913
thermodynamic props. of substances and systems, recent data 9=12193
thorium data manual 9=6480
thorium spectra 9=7939
uranium data manual 9=6479
vanadium data manual 9=6482 [7=7823
vapour pressure, melting and boiling points, 57 elements
wave-functions and energies for light elements 6=5331
X- and γ-ray absorption coefficients 7=9229
X-ray abs. and emission energies, all elements 5=5434
Collision processes (See also Field theory, quantum, interactions; Fundamental particles, interactions; Ionization; Nuclear forces; Nuclear reactions, Scattering, particles).
alignment of molecules, atoms and nuclei 5=8296
applic. in astrophysics 7=4977

Collision processes - contd
At atoms, stopping in Al and Ag 8=6315
atoms, eccentric-collision duration 7=3618
  energy transfer invest. 5=5551
  inelastic, approximations for 7=9348
  neutral, interaction cross-section 5=7398
  in polyatomic systems, rel. to emission spectra 7=6986
  rearrangement collisions 7=3401, 5837
  recombination of 3-body collision, theory 9=8690
atom—atom, rel. to h.p. Hg arc 5=6187
atoms and ions, ionization at KeV energies 8=8846
Be^9(n,2n) Be^8 5=520
bimolecular reaction rate, gas phase, collision theory study 9=8765
bimolecular reactions, theory 6=1671
binary collision expansion method 8=5631
CO^+, CO_2^+, CH^+, CH_2^+, dissociation 6=6745
central force collisions, phase-shift calc. 8=518
charged and neutral particles in plasma oscillations 5=7205
chlorinated methane vapours, energy transfer 5=5951
collision matrices for compound nucleus 5=1543
collision probability, relativistic theory 7=9007
complex nuclei, direct neutron exchange 9=13673
cross-sections in D at high energies 6=65
cross-sections near threshold, energy dependence 8=8310
detachment of electrons from H^- ions 5=3854
between 2 diatomic molecules, theory 5=1080
diatomic solids, influence of mass ratio on displacement cascades 9=4023 [9=13722
diffraction disintegration, energy and ang. distributions
diffusion of like particles across mag. field 6=2142
effect on statistical mechanics distrib, 6=7163-4
elastic, classification 8=3747
  in Minkowski space—time 7=61
electron shells, stopping power, tight-binding corrections
electrons with atoms, atomic factors 5=466 [9=3954
  in gas discharges 7=1325
  Layzer approx. 5=5482
  prod. of spectra, review 7=9061
  theory 5-464-5
electrons with H atom, partial-wave theory 8=5439
electrons, slow, with N_2 molecules, momentum transfer 6=3776
electrons with Na atoms, transfer of polarization 8=9076
energy loss and ionization processes, statistics 9=8259
fast charged particles, energy loss 8=3283
fast-particle/He-atom impact, energy loss 8=786
fluorescent solutions, energy transfer 5=858
gases, charged two-component system 6=5187
  dissoc. by impacts of second kind 5=5481
  ionization, conference report 8=1073
  neg. ion formation 5=4760-1
  relativistic eqn. 6=6398
generalized oscillator strengths, theorem 9=3144
H_2 molecules, in many-body quant. mech. 6=88
  rel. to gas viscosity 8=1556
H^-, in atomic hydrogen 7=493
H^+ + H(1s), impact-parameter theory 8=5441
H_2^+, Hd^+ and D_2^+ dissociation 8=1734
He, atoms, charge-transfer collisions with ions 8=790
  atoms and ions with electrons, freq. and cross-section meas. 6=2262
He—α-particle, charge-exchange 7=3400
heavy particles, slow collisions 8=359
  with solids, radiation damage 8=8450
high-energy, fluctuations in particle prod. 6=62
hydrocarbons, molecular flexibility and energy transfer
inelastic, effect of distortion 9=2866 [5=2046
  between heavy particles 5=1013, 2090, 2829, 8054,
  linear oscillator model 9=6209 [6=8832
  molecular, probabilities 6=3054
intermolecular forces concept 6=7207 [9=11539
intermolecular, probability of vibrational excitation, calc.
involving chem. or ionic change, perturbation calc. 6=936
ion—electron, in hot plasmas 8=774*
ionized media, dynamics 6=2973
ionisphere recombination, survey 6=7066
ions, neg., with atoms and molecules, electron loss 6=2209
  neg., review 5=8869 [5=5946
ions and electrons in disch. plasma, acoustic wave prod.
K—Zn and K—Hg, cross-sections from atomic beam scatt. 5=2216

Collision processes - contd
    low-energy behaviour, general method 5=8493
    matrix for rotational excitation 7=5867
    in meteor trails 5=2369
    modified plane waves and rearrangement collisions 8=7702
    molecular, cross-section calc. 5=6350
        and dielectric Costa Ribeiro effect 5=6115-16
        energy transfer 5=2919, 5551
        formal theory and Pauli principle 9=1846
        between non-spherical molecules 6=2723
        vibrational deactivation, long-range forces 5=412
    multiple meson prod., distrib. of particles with energy 6=63
    N^{2+}, fast, electron loss, gas molecule collisions 5=6239
    Na—He, atomic, phase conserv. 7=7318
    noncoherent scattering, Zanstra's ratio 5=4374
    nuclear and e.m. review of Russian work 6=6888
    nuclear intermediate-energy cascades 9=1570
    O_2 with He, vibrational deactivation, theory 5=2045
    particle production, at very high energies 7=2619
        heavy particles 7=7601
        multiple 7=5866 [6=1854
    particles with different masses, hydrodynamic theory
    particles with given angular momentum, theory 5=746
    phase-shift determination 8=5657
    proton—gas molecs., H^- formation 6=6746
    protons with metastable atoms, transitions 5=4320
    in radiation damage theory 5=4744, 4826
    rearrangement collisions 6=3502
        electron scatt. by atom 6=2175
        outgoing boundary condition 8=2150
    S—star, interpretation 9=8451
    slow, electron capture 8=4369
    with slow particle prod., theory 5=4045
    string oscillator, relaxation 8=8597
    stripping reactions, simple model 6=1570
    time-dependent formulation in quantum mech. 8=5659
    time reversal and polarization 9=1647
    translation—vibration energy transfer 8=2006
    two-body collisions 8=4740
    W.K.B. method for complex potential 7=5858
    ZnO neg. inner photoeffect interpret. 6=2115
Colloids (See also Electrophoresis; Emulsions; Gels; Sols; Thixotropy).
    coagulating mech. of acoustic current 5=3503
    colloidal spheres, light scattering 9=1344, 5595, 6798
    cylindrical particles, interactions, potl. energy 9=12855
    distribution frequencies 9=6353
    elec. double layer, Gouy—Chapman theory 5=7478
    electrostatic forces between nonidentical particles 5=10039
    for ferroelec. domain structure delineation 9=8067
    ferromagnetic resonance in suspensions 5=3880
    flow at small shear stresses 6=4861
    heterocoagulation 5=8362
    interaction of two identical particles 6=7792-3
    light scattering 7=5253-4, 7031
        charge effects in solns. 5=9590
        effect on refractive index 6=8714
        theoretical calc. 9=1344
    metallic, anomalous optical props. 9=5581-2
    micelles, biological, intermolecular forces 9=8772
        formation in colloidal electrolytes 9=8970
    mixtures of liquids near critical soln. point 9=6351
    particle size and polydisperseness, by X-ray scatt.
    phenomena in c.r. screen prep. 5=1720 [9=13878
    Poisson—Boltzmann eq. appl. to particle interact. 6=1705
    in shear flow, effect of electrostatic field on orientation
    stability, surface interaction forces 5=8109 [9=5229
    "steric protection" of particles by macromolecule adsorpt. 5=606
    surface activity rel. to aggregate formation 5=7477
    for use in obtaining Bitter figures 8=1770 [5=2283
    van der Waals' attraction between anisometric particles
    X-ray scatt., small angle, ellipsoidal cylinders 9=7040
        small-angle, polydisperse solutions 9=7041
    Ag in glass, spectrum 8=3880
    in alkali halide crystals 9=3302
    Co in oil, mag. powder patterns 9=12453
    di(2-ethylhexyl) sodium sulphosuccinate in n-dodecane, X-ray scattering 9=5227
    in glass, effect in nucleation 9=10285
    Hg, supercond., magnetic props. 7=6337
    L.H. detection of colloid centres 9=11566

Colloids - contd
    Na—NaCl, formed by electron bombard. 9=8866
        by ionizing radn. 8=5509
    NiO, magnetic props. 6=6010 [9=4658
    oil, insulating, contaminants, effect on elec. breakdown
    polystyrene, aggregation of spherical particles 6=6998
Colorimeters
    portable, compact, visual 8=5824
    Wright's trichromatic, modification for colour vision studies 5=9595
Colorimetry (See also Spectrochemical analysis; Spectrometry).
    abridged spectroradiometry 8=1639
    after-images, complementary hues 5=4251
    automatic spectrograph, use 7=7721
    black body luminance functions 8=7787 [7=1218
    C.I.E. chromaticity diagram, projective transformations
    C.I.E. standard source, spectral energy distributions
        W source 9=232 [9=11981
    chromatic significance of instrument errors 7=2094, 9126
    chromaticity and luminance differences 9=3021
    chromaticity coordinates, graphical conversion 7=4256
    colorant systems, calibration 5=2649
    colour coordinates, table for calc. 8=3909
    colour diferences, charts for calc. 5=8673
        small, calc. 9=12159
        thresholds 6=850
    colour discrimination, anal. of Rautian ellipses 6=2818
    colour film neutrals, visual selection 8=2266-7
    colour matching, multivariant normality 6=1147
        N.P.L. invest. 6=3660
        space error 7=9648
    colour-mixture function differences, meas. 9=9537
    colour point, in room with coloured walls 8=145
    colour specification, basic principles 5=4576
    colour temperature, comparator 5=818
        props. of W ribbon 5=1657
    colour tolerance ellipsoids, C.I.E. coordinates 7=4254
    cube-root colour coordinate system 8=8718
    disparity number meas. 6=1145
    Dove prism viewer, for space error invest. 7=4255
    dye-mixture analysis 9=4497
    dyes, visually neutral, instrument for selecting 8=1638
    "Electrofax" colour process, colorimetric data 9=1994
    of fluorescent whitening agents 8=3890
    glass colour standards for maple syrup 6=3659
    I.S.C.C. colour aptitude test 6=5040
    interference polarizers appl. 6=5026 [9=13200
    light sources, colour-rendering props., formulation
    lightness, in C.I.E. chromaticity coordinates 8=6890
        C.I.E.-tristimulus values 7=6080, 9647
    in low reflectance regions 5=6063 [8=2718
    luminance rel. to nrightness, chromaticity and adaption
    luminous efficiency function, rel. to distribution functions 9=6812
    metameric colour evaluation 8=5823
    Munsell and MacAdam colour spaces, comparison 9=234
    Munsell renotation system extension 6=3661
    nephelometer, comparison-type, use 7=3178
    non-selfluminous bodies, light sources 6=8139-40
    polarization and interference colours, anal. 5=2635
    psycholog. colour specification system 6=5574
    secondary standard lamps 6=2765
    stains on lenses, colour, computer calc. 8=3014
    stored energy in irradiated graphite, meas. 9=5633
    surface colours, subjective appearance 6=277
    television tubes, colour purity 9=5596
        luminescent colour 7=2097
    thin-film colour, computer calc. 8=3000
    transformations, propagation of errors 9=6810
    trichromatic, co-ordinates, machine computation 5=8674
        rel. to colour specification 5=6062
    tristimulus, computations, accuracy 9=1350, 9538
        digital integrator 7=7800
        propagation of errors 7=7801
    white surfaces 9=233
    whiteness, measurement 7=5259
        from photoelectric tristimulus data 9=10883
Colour (See also Photograph, colour).
    alkali oxides, theory 5=6619
    amethyst, rel. to structure 5=5115
    band systems for appraisal of colour rendition 8=1640

Colour - contd
  chromatic value transformation, correction to neutral colour discepancies 9=6813
  chromaticity diagram, new 7=8547
  chromaticity scale, uniform 7=2095; 9=9536
  colorant systems, calibration 5=2649
  colour fastness test apparatus 6=7334
  colour geometry, advanced 6=1146
  colour metric coeffs., approx. anal. 7=4253
  colour-mixture curves and colour filters 7=2096
  colour-mixture functions, differences 9=9537
  colour printing, correction in 4-colour process 5=6973
    computer for simult. eq. soln. 5=7621
  colour temperature meter 9=2190
  colours on Jupiter 6=7105
  control by ultrasonic diffract. grating 5=8630
  dehydrodianthrone, phototropy 9=5598
  difference, photoelectric meter 9=4498
  effect of antireflection films in optical instr. 7=288
  fading due to daylight and different artificial lights 6=3662
  feldspars 9=3320
  filters, quality factors 8=5822
  fluorescent illumination 6=8138
    daylight materials, measurement 9=3361
    screens, bilayered, electron excitation 9=215
  German standard chart (DIN-Farbenkarte) 5=2650
  glasses, coloration by u.v. and X-rays 7=6627
    radiation coloration, fading 9=6286
  hydrated iron group salts 5=2974
  luminance of equally bright colours 5=1745
  C.I.E. luminosity curve det. from colour mixture data
  matching data, basic, new det. 6=5039 [7=7802
    statistical techniques 9=6811
  Munsell key for Horticultural Colour Chart 7=7803
  of natural objects 6=2819
  olefin sulphuric acid systems, cause 6=9024
  Ostwald's system rel. to Young—Helmholtz theory 5=2647-8
  of oxide powders, shock-induced charge 8=5505
  photometry, heterochromatic, systematic error of flicker method 9=6674
  phys. quantities meas. by colours 6=7333
  produced by reflection from rough surfaces 8=5804
  quartz, effect of irradiation, bibliog. 8=4447
  "sensitive colour" of thin plates in polarized light 8=144
  shadows, constancy 9=4499
    influence on colour appearance 9=10884
  shaft in change from daylight to tungsten 9=5597
  signal lights, identification 9=1974
  specification from trichromatic meas. 5=6062
  specification of light rel. to colour rendering props. 5=4576
  spectral coordinates determination 9=12921
  standards in commerce and industry 9=6814
  surface colours, Munsell 5R plane, fluorescence and grey content 9=13201
  television, chrominance signals 9=6413
    pictures, sharpness 6=8077
    symposium 8=1006; 9=13199
    tricolour tubes, phosphors for 6=1104
  3-dimensional system 6=7333
  tristimulus computations, accuracy 8=3012
  W, true and colour temp. rel. 5=1657
  white surfaces, description 9=233
  whitening agents, efficiency meas. 8=3890

Colour centres
  absorption frequencies in impurity centres 9=3305
  coordinate curves, one dimensional 9=10239
  crystals, various review 9=10826
  cubic symmetry crystals, anisotropic emission 5=2307
  dissociation, rel. to exo-electron emission 5=6204
  electron spin reson., approx. wave-functions 7=4897
  in electron theory of crystals (book) 5=622
  F-centres, deficiencies in quantitative evidence 5=8393
    as donors in oxide layers 5=5402
    electron-spin resonance, theory 9=8860
    electron transition theory 5=4182
    field emission from 9=5162
    Hamiltonian 9=10255
    hyperfine interactions 8=5486
    ionic crystals, electron spin reson. 8=2036
    ionic crystals, interact. with acoust. vibrations 8=2661
    KCl-type crystals, h.f.s. in external mag. field 8=8448

Colour centres - contd
  F-centres, light absorption and emission 7=9059
    in mixed crystals 8=8447
    optical props. 8=2037
    optical transitions, theory 9=9468
    oscillator strength, chem. det. 8=4434
    paramag. resonance, in mag. fields 9=13794
    particle—vibration interactions 8=2154
    quantum theory of excited states 8=9112
    radiationless transitions 9=7520
    structure and electronic g-factor 8=1331
    thermal bleaching 8=2035
    thermoluminescent recombination 8=8706
  F_2^+ -centres, quantum states 7=6703
  formation mech. 6=799
  H-centres, electron spin resonance 8=2654
  hypothesis 7=5736
  in insulating solids, dielec. loss 8=3978
  ion displacement in lattice, mech. 5=3265
  M-centres, inversion symmetry 9=5160, 5161
    wave-functions by point-ion lattice method 8=404
  microwave reson. study of electronic struct. 5=7516
  phosphorescent inorganic crystals 7=4207
  photochem. and thermal formation 6=7020
  in photographic latent image 7=3880
  plastic scintillators, irrad., blue coloration 5=9241
  quantum mechanical model 9=12077
  R-centres, inversion symmetry 9=5160
  refractive index and Faraday effect 8=5755
  rel. to mechanism of luminescence 6=244
  Spala (Poland) physics conf. 5=5213
  thermal bleaching correl. with elec. conductivity 6=4304
  trapped electron ionization 5=3917
  U-centres, conversion to F-centres 7=2829
  use of pressed pellets 7=5735
  V-centres, electronic structure 9=812
    symmetry properties 8=8443
    thermoluminescent recomb. 8=8706
  V-centres, electron spin resonance 6=1390, 6785
  AgBr, V-centres 6=7393, 8790
  Ag halides, absorption spectrum 8=4875
    F-centre thermal formation 5=5087
  Al_2O_3, γ- and reactor- irradiated 5=5720
  alkali and alkaline earth fluorides 7=1194
  alkali halides, absorption, β-band 9=1300
    absorption of light by solloids 9=3302
    absorption light by F-centres 9=1877
    activated, electron-acceptor levels 9=9467
    activated, photostimulated emission 5=2620
    assoc. chem. effects 5=8394
    coloration, by elec. fields 8=3128
    compressed pellets 8=3466
    containing NO_2^- ions 5=6620
    double spin resonance, freq. spectrum 9=12800
    effect of plastic flow 5=5086
    electrolytic coloring and related effects 8=1329
    electron microscope study 9=10234
    F-band constants, excit. energy rel. 6=4084
    F-band oscillator strengths 7=4894
    F-centres 5=7514, 8382
    F-centres, bleaching 5=8395
    F-centres, configuration coordinate curves 6=3362
    fluorescence, quantum yield, calc. 9=10807
    F-centres, luminescence 5=859
    F-centres, susceptibility and entropy below 1^0K 6=3702
    F-centres, thermoluminescence 9=9497-8
    F_2^+ centres 6=7820
    F and Z_2 centres, transformation 9=5158
    H^- ion sensitization 5=7513
    interaction with dislocations 5=5730

Copper - contd
spirals developed on single crystals 7=844
sputtered (111) spot patterns 8=3491
stacking-fault energies, from stress—strain rel. 9=8816
static pressure calc. 6=1411
strain potentials in electrolytes 5=5044
stress annealing films 6=3306
struct. defects and resistivity min. 5=3718
tensile strength measurements 9=5214
thermal conductivity, commercial metals at low temp.
at low temp. 8=3020 [8=5833
2-100°K 7=2112
thermal expansion at low temp. 5=5358; 8=149
thermionic electron emission 7=1423
thermoelectric power, of Ag Cu multiple layers 9=3520
thin Ag solid Cu and solid Ag thin Cu 9=3519
layers on thin Au solid Au couple, null-thermo-e.m.f. 9-3521
Cu—metal films, rel. to thickness 9=4639
effect of cold-working 7=1315, 3308, 7931
at low temp. 7=9203
point imperfections effect 6=2129
rel. to Bauschinger effect 5=305
twinning, cold-worked crystal 8=4517
conjugate deformation, in single crystals 8=3556-7
ultrasonics, scattering 6=8058
use as a high-vacuum material 7=1120
vaporization, mass spectra study 7=1969
whiskers 8=3543
plastic deformation 8=820
strength 9=12839
tensile strength 7=3772
wires, torsional oscillations, damping 9=8936
work function 7=7078
temp. dependence 6=2920
work hardening, crystals 5=6614
mechanism 8=4485-6
world's resources 8=473
X-ray reflection and absorption 7=4423
X-ray scattering, cold worked foils 9=7046
under cyclic stress 9=7048
neutron irradiated 9=7044
patterns, back reflection 9=9013
polycrystalline, deformed Cu 9=7043
X-ray spectra 8=633
in metallic Cu, $CuCl_2 2H_2O$, $CuSo_4 . 5H_2O$ 9=8195
monochromatization 9=5776
X-rays on, photoelectric and secondary electron emission
Young's modulus, effect of pressure 8=8481 [6=8802
in Zn single crystals, distribution 9=12876
Copper compounds (See also Alloys). [9=2932
Cu++ salts, electron and nuclear resonance and relax.
cupric compds., Curie—Weiss law deviations 6=4507
paramagnetic resonance 6=3835 [8=8860
effect of exchange interaction on mag. and thermal props.
salt solutions, paramag. longitud. relaxation 9=2140
semicond. compds., raw matl. and appl. 5=6127
Cu acetate monohydrate, paramag. resonance 9=8339
Cu acetonylacetone, mag. thermodynamic props. 9=2287
CuBr, exciton spectra, low temp. 6=4311
low temp. luminescence 9=12093
$Cu_2Br_2.2H_2O$, antiferromag. resonance 7=2420
$Cu_3(Co_3)_2(OH)_2$, azurite, antiferromag. state 9=2504
CuCl, isotopic effect in Cu ion electrolytic migration
magnetization 6=7512 [5=591
$CuCl_2.2H_2O$, antiferromagnetism 8=4120; 9=3649
antiferromag. ordering and electronic structure 8=6049
antiferromagnetic resonance 5=9766-7; 6=4499-501, 6=6767
and $CuCl_2.2D_2O$, antiferromag. resonance 9=9800
susceptibility, antiferromag. and paramag. 6=3000
$CuF_2.2H_2O$, antiferromagnetism 8=5115; 9=2503
$CuFe_2O_4$, specific heat, 100-600°C 9=9567
Cu ferrites, domain structure 9=2501
effect of Cu on sintering 8=3237
Faraday effect at 10 kMc/s 6=3031
h.f. properties 7=539
mag. and elec. props. 6=6776
with narrow resonance absorption 9=446 [8=3235
Mg—Cu—Mn—Al ferrites, preparation and properties
Ni—Cu ferrite, magnetostrictive transducers 8=1569
Cu—Zn ferrites, mag. props. temp. var. 6=2231

Copper compounds - contd
Cu ferrite—chromite, magnetic props. 7=8272 [6=3023
formate, tetra- and dihydrate, paramag. reson. absorpt.
Cu halides, films, visible and u.v. spectra 6=4994
optical characteristics in absorption hands 9=9504
vapours, mass spectra 6=2520
cuprous halides, elec. conductivity 7=7914
Cu_2HgI_4, luminescence and reflection spectra, at low temp. 9=10835
CuI, anomalous dispersion, effect on absorpt. spectrum
exciton spectrum, low temp. 6=4311 [6=3617
films, light absorption rel. to thickness 7=7012
films, optical dispersion 7=5967
luminescence at low temp. 7=5219
photoelec. effect in vac. u.v. 7=7177
X-ray intensity reflect. rel. to temp. 8=7606
CuI:CuCl and CuI:AgI, exciton bands 9=5150
$CuIuSe_2$, $CuIuTe_2$, semicond. props. 7=9180
$CuK_2(SO_4)_2.6H_2O$, paramagnetic relaxation 8=5121
CuK Tutton salts, paramag. relaxation, v. low temp. 8=3253
$Cu(NH_3)_4So_4 . H_2O$, anomalous mag. props. 9=11194
at liq. He temp., paramag. susceptibility 9=8280
$Cu(NH_4)_2(SO_4)_2$, paramagnetic absorption 7=3449
$Cu(NH_4)_2(SO_4)_2.6H_2O$, paramag. props. at 1325 Mc s 9=3643
paramagnetic relaxation 8=5121
Cu oxides, films formed in air, structure study 5=4989
films, structure 6=4685
high-temp. struct. changes in near-contact layer
layers, exo-electron study 7=6255 [5=1292
rectifiers, capac. temp. rel. 5=8769
rectifiers, effects of surface treatment 8=4014
surface-zone elec. conductivity 6=8187
CuO, crystals, effects of unidirectional rubbing 5=568
decomposition into Cu_2O in vacuo 8=823
electron diffraction 6=821; 7=912
electronic structure, rel. to Cu and Cu_2O 9=1860
with Li, semicond. props. 7=5333
magnetic susceptibility 5=8909
powdered, thermoelec. effect 6=6659
rectifiers, upper electrode material 8=7007
semiconduction study by mag. behaviour 5=7044
thermoelectric effects 8=625
CuO—MnO—O, prep. and props. 7=8616
Cu_2O, absorption spectra, review 6=230
conductivity rel. to heating and light 6=7425
contact potl. rel. to temp. 6=2869
contact resistance, Cu_2O—metal 6=5864
crystal growth at 1020°C 6=8465
crystal orientation rel. to rectification props. 5=8768
on Cu crystals, growth spirals 8=7600
on Cu monocrystals 6=9032
on Cu, discontinuous covering 9=6361
on Cu, sec. electron energy distrib. function 5=8018
and Cu, neutral overgrowth 6=2533
dark current, effect of molec. absorpt. 8=7025
diamag. exciton levels and cyclatron resonance 9=6253
dipole absorpt. rel. to lattice defects 6=3711
elec. and optical props. rel. to structure 8=2245
elec. conductivity, 1020-1250°C 9=13294-5
electroluminescence 9=5576
electron bombarded, i.r. pulse emission 8=8817
electron reflection, inelastic 6=5147
electronic structure, rel. to Cu and CuO 9=1860
epitaxial growth on Cu 9=13886
exciton absorption lines 7=5208
exciton ionization by elec. fields 8=3456
films, formation at low press. 6=2532
films, study 9=4062
i.r. luminescence 7=260, 9098-9
luminescence 7=9103
optical spectrum and magneto-optical props. of excitons 9=6258
oxidation at high temp. 5=10026
phonon interaction of electrons 9=5136
photoconductivity 5=6143; 8=1706, 7015, 7017-8, 8=7973; 9=9646
photocond., effect of surface treatment 9=1467
photovoltaic effects 9=11034 [9=8103
rectifiers, crystal struct. and mag. susceptibility
rectifiers, current—capacitsnce relationship 8=614
rectifiers, diffusion potential 5=2754
rectifiers, effects of pre-illumination 9=12284

Copper compounds - contd
  Cu$_2$O, rectifiers, zero bias resist. temp. dependence
    as S and Se molec. beam detector 8=8404 [5=2753
    secondary electron emission 7=2314
    semiconducting props. 5=3753; 9=12259-60
    thermoelectric power 5=8788
    u.s. excited, conductivity 9=9598
    use in thermocouples 7=9207
    Zeeman effect and exciton structure 9=5541
  CuPbAsS$_3$, prep. and semicond. props. 8=5880
  Cu phthalocyanin crystals, dislocations 9=8808
  CuS, point contact rectifier 7=2240
  Cu$_2$S, β-phase, Madelung energy calc. 5=6343
    elec. conductivity 7=7915
    rectifiers, tunnel effect 7=9195
    reduction by H 7=8236
  Cu$_2$S—Pt, point-contact rectifier 7=3290
  CuSO$_4$, antiferromagnetic susceptibility 7=538
    antiferromagnetic transition and susceptibility 8=6044
    in delineation of Si p—n junctions 9=9637
    mag. anisotropy, antiferromag. transition 9=9793
    mechanical resonance dispersion, 100-5000 c/s 9=6619
    nuclear spin relaxation 9=1708
    whiskers, growth from solution 8=3565
  CuSO$_4$.5H$_2$O, magnetic susceptibility 9=7145
    paramagnetic resonance 6=480
    paramag. resonance and mag. props. 8=232, 5121
    spin—lattice relax. time 8=9128; 9=822
  Cu selenides, struct. changes with time 6=5543
  Cu$_2$Se elec. conductivity 7=7916
  Cu tellurides, elec. conductivity 7=7916
  Cu$_2$Te, elec. cond. and Hall effect 8=3105
  Cu Tutton salts, mag. susceptibility below 1°K 6=3682
    paramagnetic relaxation 9=11239
    paramagnetic resonance 5=2888; 6=6021
Coriolos forces

Crystal properties
- absorbing biaxial crystals, behaviour near axis 5=9574
- acoustic wave scattering, by polycrystals 9=2179, 11958
- AgBr, electron bomb. induced elec. conductivity 6=6623
- alkali halides, conductivity, mech. deform. effect 6=1254
  - expansion and conductivity 7=2790
  - high-temp. breakdown 7=8651
- anisotropic behaviour of group of cupric salts 7=6712
- antiferromag., transitions and phase diagrams 6=5209
- aromatic, anisotropy rel. to benzene ring orient. 5=9538
  - semiconductivity 6=325
- Bi$_2$Te$_3$, cond. and thermoelec. power 6=7010
- birefringence patterns of crystal spheres 6=7326
- breakdown in ionic crystals, theory 5=9637
- cleavage, cracks, propagation 7=1726
  - electron emission and gas evolution 9=10355
  - of metal monocrystals 8=4484
- CoO, mag. susceptibility 7=2424
- coercive force, rel. to dislocation density 8=8112-13
- constituent effects, e.s.r. of Ni^{++} in double nitrates 9=11244-5
- creep, of metals, void nucleation sites 8=8490
  - steady-state 8=428
- crystal and stress optics 8=5744
- Cu, neutron irradiation effects 6=6972
- cubic crystals, elastic constants 6=3315; 8=5495-6; 9=4074
  - ferromag. anisotropy 5=9770; 6=2225
  - magnetoconductivity 8=5886
  - optical dispersion 9=1857
  - photoelastic dispersion 6=2019
  - polar in elec. fields 6=7370
  - polarizability 8=3450
- Debye charac. temps. of noncubic crystals 7=1734
- Debye losses, due to electrons trapped in vacancies 9=3428
- density, rel. to dislocations 8=3465
- device for applying compression to small crystals 6=7770
- diamond-type crystals, optical props. 8=5461-2, 8426
- dielec. anomalies in crystals containing water 5=1793
- dielec. breakdown in non-ionic crystals 7=1259
- dielec. const., anisotropic matls. Fröhlich's theory extension 5=4621
  - contribution of excitons 9=3419
- dielec. crystals, electronic conduction 5=1807
  - long chain structure 9=12205
- dielec. losses, due to lattice defects 8=3978
  - mechanisms 7=6148
- dipole interaction, and double n.m.r., F^{19}, Na^{23} study 9=2930
- dispersion, curves, molecular crystals 8=7502
  - effect of elec. polariz. of elastic waves 8=6733
- dissolved impurities, effects on mech. props. 8=4433
- domain structure rel. to ferroelectricity, review 6=2849
- effect of dislocations on absorpt. edge, non-metals 5=2305
- effective fields, static permittivity 8=4940
- elastic constants, and crystal stability 8=7555
  - of cubic crystals 6=3315; 8=5495-6; 9=4074
  - det., light scatt. method 5=6550
  - equations for transformation 9=7548
  - meas. by resonance apparatus 8=4511; 9=4073
  - polycrystals, calc. from single crystals 8=8485
  - rel. temp., u.s. meas. 8=3807
  - simplified calc., arbitrarily orient. crystals 7=795
  - single and polycrystals, u.s. meas. 5=5672
  - single crystals, elastic wave method 5=570
  - and strain under hydrostatic press. 7=8219
  - temp. dependence and anisotropy 9=4058
  - u.s. pulse meas. 7=3764
- elastic waves, with cuspidal edges 8=4796
  - damping 8=7760
  - elec. polarization 8=6733
  - orientation dependence in single crystals 9=5433
- elasticity, Laval's "volume-couples" 8=1343
  - rel. to potential energy 6=7563

Crystal properties - contd
  elasticity, required constants 9=2968
    review 5=7507
    theory 5=5074-5, 8376, 9992
  elec. breakdown, directional effects 9=7037
  elec. conduction, electron-scatt. effects 7=7855
    high-pressure effects 8=3992
    theory 6=5082
  e.m.f. produced during melting and freezing 8=4919
  electron emission from lattice step 6=1283
  exo-electron emission, and luminescence 9=4688
  extensometer for single crystals 5=5239
  face slip in single crystals 5=10003
  ferrites, anisotropic resonance relations 7=3445, 8012
    tensor susceptibility 8=2403
  ferroelectric crystals, comprehensive review 8=7880
    high permittivity, impurity induced 9=4543
    polarization reversal 8=7884
    spontaneous polarization 9=1409
  ferromagnetic anisotropy 8=2393, 3221
  ferromagnetic crystals, min. saturating fields 8=6059
  ferromagnetic resonance, in metals 7=2400
    in uniaxial polycryst. materials 8=8867
  $GdFeO_3$, mag. props. 6=6007
  grain-boundary structure and charge transport 6=1217
  graphite, c-axis elec. conductivity 6=6624
    radiation effect on conductivity 6=7397
  guanidine Al sulphate, ferroelec. 6=2065
  H bond in crystsls, expansion effects 6=3353
  hardness and thermal cond., correlation 9=10334
  Hf, deformation charac. 6=4048
  i.r. absorption, in ionic and homopolar crystals 5=2301
    by NaCl-type lattices 9=2924
  i.r. rotational spectra of symmetrical crystals 8=957
  interference emission of high-energy electrons 5=991
  internal field, dielectric relaxation 5=6104
  internal friction, meas. by resonance spectrometer 9=4073
    in presence of static stress 8=421
  ionic conduction, migration processes 8=4453
    and self-diffusion 5=9986
  ionic crystals, dielec. const., temp. effect 5=3707
    100 kc/s - 20 Mc/s, temp. depend. 9=5655
    dielec. const. theory 5=9625; 9=4542
    double n.m.v., narrowing effect 9=8357
    elec. breakdown, polaron theory 9=13349
    i.r. optical constants, calc. 8=5805
    melting 8=4920
    melting point rel. to refractive index. 7=6977
    optical absorption edge 9=6750
    plastic deformation 9=5202
    strength and charged dislocations 8=1322
    surface tension 5=3484
    thermal conductivity at low temp. 5=7889
    thermoelectric power 8=4039
  kinetic theory 7=1113
  lattice rotation, during compression 8=6456
  light absorption, anisotropic crystals 8=932-3
    effect of elec. field 8=7827
    exciton, absorption 8=4408
    homopolar crystals, impurity centre, absorpt. 8=972
    impurity absorption, by molecular organic crystals
    "intrazonal" mechanism 8=4409 [8=1613
    by mobile electrons, selection rules 8=2647
    oscill. in mag. field 8=9116
  light propagation in absorbing biaxial crystals 6=2789
    in crystals with excitons 9=1856
    polycrystalline media, theory 5=4492
  light scattering, coherent, monocrystals and block structure 6=3654
    by nearly perfect crystals 8=3904
    by piezoelectric crystals 5=4565
  line narrowing, by double freq. irradiation 9=2929
  linear expansion, formulae 5=1347
  longitudinal wave propag., specific directions 5=5947
  magnetic anisotropy, meas. 9=3636
  magnetic crystals, biaxial, optical props. 9=9505
    neutron scatt., extinction effects 9=7163
    optics of 7=9122-4
  magnetic moments rel. to crystal symmetry 6=7004
  magnetoelectric effects, theory for 11 types of Laue symmetry 9=4627
  magnetostriction, and effective anisotropy 8=7161

Crystal properties - contd
  magnetostriction and plastic deform., theory 8=7565
    quantum theory 5=7194
    second anisotropy coeff. 8=4145
    of single crystals 7=6685
  metals, creep at v. low temp. 6=8437
  molecular crystals, dielectric relaxation 9=12203
    thermal conductivity 9=10894
    molecularity coeff. 9=5124
  Ni ferrite, anisotropy and g value 7=2421
  NiO, mag. susceptibility 7=2424
  non-polar crystals, absorption curve 6=7564
    conductivity in strong elec. field 5=3722; 9=3441
  n.m.r. absorption 9=2929 [8=7504
  optical props., Bogolyubov—Tyablikov perturb. theory
    invariant description, non-magnetic crystals 9=12153
    optical activity, effect on Raman spectra 9=10792
    optical activity, theory 9=13195-7
    optical indicatrix, study by "extinction curve" 9=7589
    optical rotation, molecular crystals 8=1004
  organic dipolar crystals, dielec. polarization 5=7015
  organic mixed crystals, sensitized fluorescence, theory 5=1714
  oxidic materials, with hexagonal structures 7=5466
  paramag. crystal, force in inhomogl mag. field 8=8859
  Pb, single crystals, elasticity 6=7756
  perovskite mixed-crystal systems 5=7010
  perovskite structures, mag. props. 6=7530
  photoelastic behaviour of some cubic crystals 5=1742
  piezoelec. crystals, wave propagation 5=1612
  piezoelectricity, division into classes 8=3552
    theory 5=5074-5, 8376
    transformation of const., eqns. 9=7548
  plasma resonance, obs. and theory 6=329
  plastic deformation, origin of dislocations 8=1324
    and magnetostriction, theory 8=7565
    theory 6=8996
  plastic stress—strain relation, f.c.c. crystals 8=6455
  polar crystals, conduction and breakdown 8=5872
    cyclotron reson., electron—phonon effects 9=10247
    dielec. relaxation losses 7=2179
  polycrystal in extension, X-ray diffraction study 8=7547
  pyroelectric polarization, meas. 9=12227
  Rayleigh scattering by anisotropic crystals 5=1740
  refraction of elastic waves in cubic crystal 5=2525
  refractive index, Abbé refractometer meas. 9=5490
    rel. to lattice energy 7=4121
    twinned uniaxial crystals, meas. 9=13137
  relationship with point groups of crystal symmetry 8=5515
  in scintillation counters, intrinsic resolution 9=2551
  shear stresses, distribution functions 8=6457
    grip effect, in tensile test 8=7567
  shear-wave propag. in twisted crystals 8=88
  sheared superconductor, thermodynamics 6=377
  simple vibration modes 7=5123
  specific heat, of complex crystals 8=5457-9
    of lamellar crystals 6=1180
    and thermal resistivity, due to mobile dislocations
  stress—strain relations 5=9188 [9=2915
    interface couples, doubt on stress tensor symmetry 9=7547
  structure necessary for efficient rectifier 6=8204
  superconductors, shape of superconducting domain 8=8786
  surface elastic waves in cubic crystal 6=2730
  surface waves 8=5717 [7=8003
  susceptibility and Curie point of mag. dilute crystals
  tetragonal crystals, elliptic cone of internal refract. for quasi-transverse waves 9=7588
  thermal agitation, nature 6=4079
  thermal conductivity, at low temp. 7=3185
    rel. to melting pt., theory 9=13206
    theory (book) 5=7221
  thermal deformation 7=7467
  thermal expansion, calc. from elastic consts. 9=13217
    X-ray meas. 8=3930
  thermal grooves at grain boundaries 7=6637
  thermal stresses in cubic crystals 7=8443-5
  time-reversal symmetry and polarization fields 8=6787
  trigonal holoaxial crystals, elastic eqns. 8=2683
  u.v. dichroism, organic crystals 5=2616
  vaporization (lattice) entropies 7=4294
  variation with molecular concentration 7=4844
  volume expansion meas. 7=312

Crystal properties - contd
  W, elec. conductivity in mag. field, lattice and electronic
    components 7=8551
  whiskers, elastic props. 9=8933
    review 9=11549
    twist, rel. to screw dislocation 8=3518 [7=9983
  wurtzite-type compounds, distortion and polarization
Crystal structure (See also Polymorphism).
  alloys, ordering, effect of thermomagnetic treatment
  annealing effects 9=8996 [9=9777
  antiferromagnetic, with non-magnetic ions 9=442
  antiferromagnets, domain walls 6=2997
  blendes, rel. to Ga and In content 7=9960
  crystallite size det. from X-ray interference function
  crystallographic wire models, jig for 8=6497 [7=3834
  cubic—orthorhombic phase change anal. 8=6438
  domains, secondary, theory 5=9778
  effect on electron emission 7=6247
  ferroelec. crystals, review 8=7880
    structural coeff. of internal field 8=5859
  ferromagnetic domains, electrical analogue 7=7206
    observed by Kerr effect 8=8117
    photoelectric study 7=7231
    sizes and surface structures 7=4556
  ferromagnetic granular structure 7=4550
  fibres, crystallinity from i.r. absorption 5=843
  films, evap., rel. to optical props. 9=9510
    evap. metal, for electron shadow microscopy 8=7551
  grain boundaries, diffusion 5=5717
    geometry of junctions 7=8943
    idealized, motion 6=7823
    thermal groove prod. 7=6637
  Guinier—Preston zone structure 6=7815
  inert-gas crystals 8=1304
  ionic crystals, binary, electronic band structure 9=2907
  Ising model for imperfect lattice 9=5127
  mag. dilute crystals, susceptibility and Curie point 7=8003
  metals, deformed single crystals, grain size 9=777
    and non-metal phases, bands 9=5256
    thin foils 7=1681
  mosaic structure, review 7=1725
  nucleation of noncoherent layers 9=9005
  phosphors, annealing effects 9=8996
  poly- and pseudomorphism, in thin crystal layers, grown
    from vapour phase on NaCl 9=4098
  polytypism, and random stroking faults 9=10258
  spherulitic polymer films, by electron microscope 8=9147
  superconductors, intermediate state 8=5011
  surface microstructure, 3-dimen. microscopy 9=863
  A, solid 7=2791
  Ag thin films 7=6052
  AgI aerosols 5=5751
  Al, crystallites, grown by deformation 9=878
    etching structure 9=926
  Al—Cu wires, plastically deformed, formation of
    Guinier—Preston aggregates 9=10327
  alkali halides, rel. to luminescence 8=979
  Alnico, domains 5=9250
    shape and anisotropy 6=786
  anhydrite, from dehydration of gypsium 9=7592
  $BaFe_{12}O_{19}$, cation substitutions 9=3641
    resonance in anisotropic crystal 6=1361
  $BaTiO_3$, domain conversion 8=7505
    domains 5=1800, 5706
    domains rel. to phase transitions 7=7824
    effect of Fe_2O_3 addition 6=4380
    evaporated films 5=6545
    ferroelec. hysteresis 6=1195
    rel. to optical behaviour 5=2614
    rel. to permittivity 7=6150
  $BaTiO_3$—$MgTiO_3$, rel. to permittivity 7=6151
  C, crystallite size, of various forms 9=5241
    intermediate forms 8=6950
  calcite, cleavage planes 5=10080
  camphor, polymorphic transformation 8=1018
  CdS, lamellar structure 9=4097
  CdSb, binding forces, rel. to various props. 8=4007
  Co, domain patterns 7=5467
    domain structure, "magnetic ink" study 8=5126
    domains and mag. leakage field 8=5117
    domains, effect on electron diffraction 8=4535
  $CoCl_2$, mag. structure 6=3002

Crystal structure - contd
  CoF_2, magnetic structure and props. 8=6045
  Co substituted ferrites, controlled anisotropy 7=8011
  Co-ferrous ferrites, ordering on mag. annealing 7=7233
  Co magnetite, magneto-crystalline anisotropy 6=8275
  $CrCl_3$, mag. structure 6=3002
  Cu, evap. films 6=3310 [8=6049
  $CuCl_2.2H_2O$, antiferromag. ordering and electron structure
  Cu—Mn alloys, domains rel. to mag. props. 8=233
  Cu—Pd alloys, superstructure 9=12197
  Dy, magnetocrystalline anisotropy 6=5214
  Er, magnetocrystalline anisotropy 6=5214
  Fe, cubic particles, domain walls 8=8929
    films, crystallite size rel. to coercivity 7=2434
    films, evap., domains 8=3240
    polycrystalline, domain structure 6=7523
    whiskers, and tensile strength 9=8940
    whiskers, domain structure 9=457-8
  $FeCl_2$, mag. structure 6=3002
  FeF_2, magnetic structure and props. 8=6045
  Fe—Ni ferrites, cation/anion ratio, rel. to mag. props.
  ferrites, cation distrib., X-ray det. 9=1940 [8=1133
    single crystals, domain patterns 7=6353
  graphite, artificial, interlayer dist. rel. to disorder 7=9465
    conical spiral and laminar cleavage 8=8519
  haematite, magnetostrictive distortions 6=3826
  hausmannite to spiral transformation 8=2668
  ice, disordered, residual entropy 9=1851
    effect of melt impurities 8=4483
  InSb films, evap. in vacuo 8=2680
  KCl, layers grown on monocrystal substrates 7=2793
    mosaic structure 9=9025
    surface, in hygrometer element 8=5707
  $KNbO_3$, cubic—tetrag. transition 6=2066
  martensite, mosaic structure 7=9462
  Mg ferrites 6=8274
    magneto-crystalline anisotropy 6=8274
    rel. firing temp. 8=3237
  mica, spiral cleave 7=3808
  $MnAu_2$, magnetocrystall. anisotropy 6=5213
  Mn—Bi alloys, mag. domain structure 8=4151
    domains and subgrain structure 8=229, 8928
  MuF_2, magnetic structure and props. 8=6045
  Mn ferrite, magnetic domains 8=4152
  Mn_2Sb and MnSb, mag. domains 7=9258
  NH_4Br—TlBr, density and structure 9=6357
    luminescence depend. on crystal type 9=5570
  NH_4F, NH_4^+ ion fundamental freq. 5=8618
  NaCl, crystallites in grown crystals 7=1757
    grain-boundary energies 9=4038
    polygonization pattern made visible 7=8256
    v. high pressure effects 7=1699
  $Na_5Fe_3F_{14}$, ferrimagnetic 8=6048
  Ni, cold-rolled, crystallite size 8=6514
    films, crystallite size rel. to coercivity 7=2434
    sheet, effect on mag. props. 8=4135
  $NiCl_2$, mag. structure 6=3002
  NiCo ferrite 9=9796
  Ni—Cr alloy, films, grain size 7=7452
  NiF_2, magnetic structure and props. 8=6045
  NiO, colloidal crystals, mag. structure 6=6010
  Pb, macromosaic structure 7=3813
  PbS, evap. films, dendrite structure 8=7022
    layers, microstructure 5=2233
  PbTe, texture of evap. films 8=455
  Perminvar alloy, domain structure and mag. props. 8=8136
  polyethylene terephthalate rel. to visco-elastic props.
  polymers, infrared study 7=2833 [5=2288
  proteins, problem of "free" water 7=2852
  Rochelle salt, domains 7=7847, 9677; 8=4937, 7885
  rock salt, polygonization 7=8255
  S, texture symmetry 8=5862
  Sb, rel. to elec. props. 7=7912
    thin films, electron-microscopic study 6=6955
  Sb_2S_3 films, prep. by sublimation 8=6794, 7541
    rel. to photoconductivity 8=1705
  Se hexagonal, rel. to elec. cond. 6=8201
  Si—Fe, domain nucleation 6=3027
    domains 7=1458, 2413, 2831
    magnetic stray fields, on grain boundaries 9=8301
    magnetization and domain structure 6=6787
    subgrain structure 8=7546

Crystal structure - contd
- Sn, grain boundaries 7=2830
  - macromosaic 7=3813
- SnBr$_4$, nuclear quadrupole resonance meas. 7=3509
- snow, polar 9=13972
  - symmetry 8=4526
- steel, 7% Cr—Mo 7=7455
  - crystallites, effect on X-ray intensities 9=8913
  - Si, domain and grain orientation 5=9249
- Ti, magnetic anisotropy 6=5231
- TiO$_2$, dielec. losses 8=3976
- WO$_3$, domain structure 7=8297
  - effect of external stress on domain structure 9=10262
- YFe garnet, effective exchange constant 9=10935
- Zn, bent crystals 7=3814
  - cellular substructure, rel. to growth rate and temp. grad. 9=5243
  - creep, at liq. N$_2$ temp. 9=8942 [8=7593
- ZnS-type compound, short-range order and crystallization

Crystal structure, atomic (See also Crystals, electron states; Crystals, lattice mechanics; Electron diffraction crystallography; Neutron diffraction crystallography; X-ray crystallography).
- atomic bonds, empirical problems 8=7609
- clusters in system containing two types of atoms 8=9110
- covalent crystals, effect of irradiation 8=4430
- crystal-field effect on interionic separation 8=9109
- crystals containing stacking faults 8=1371
- electrode layers in Se rectifiers 7=8631
- electron density distributions 8=3575
- felspar structures, notation 6=8490
- ferrimagnetism and Ising model 7=6334
- H- containing crystals, neutron diffraction 8=3598
- H position det. by Neutron diffraction 8=3597
- "heavy-atom" method of solving structures, improvement
- icosahedral coordination of 12 spheres 7=888 [9=7628
- i.r. dichroism, review 5=5330
- i.r. spectroscopy, applications 7=6758
- ionic crystals, anisotropy of field around ions 9=12761
  - effect of irradiation 8=4430
- ionic radii, definition 6=8467
- lattice constants, calc. in crystal statistics 7=8932
  - and interatomic distances, calc., use of atomic radii 9=6377
  - meas. with diffraction goniometer 7=2840
- lattice spacings, electron microscope obs. 8=2706
- mosaic structure, polycrystals 6=7029
- Na atoms, in diamond lattice 9=7500
- nuclear magnetic resonance method, theory 9=7194
- nuclear quadrupole resonance method 8=8532-3
- optical representation 7=8278
- optical transforms, electronically presented, appl. to plane-molecule structures 9=7629
- order—disorder, review 7=7498
- paracrystalline, simulation by gratings 5=3273
- phosphors, influence of activator environment of luminescence 7=9637
- position-correlation function 7=9981
- positional probability of atoms, Fourier analysis 9=7643

      nuclear quadrupole reson. study 5=638
    diformylhydrazine, dichroism study 5=640
    di-glycine nitrate 9=2304
    5:10-dihydro-5:10-dimethylarsanthren, dibronide and di-iodide 9=13947
    2-4-dihydroxybenzoic acid rel. to 1-hydroxy-4-amino-benzoic acid 6=7030
    diphenyl 7=8300
    diphenyl and derivatives 8=454
    α - α' dipyridyl 6=8482
    euclase ($HBeAlSiO_5$), Al^{27} nuclear mag. reson. study
    fluorocarbon polymers 5=438 [5=7258
    fluorene 5=2064
    $(glycine)_3.H_2SO_4$, ferroelec. phase 9=13958
    glyoxime 7=8949
    graphite crystal compounds, rel. to elec. conduct. 9=6946
    guanidine aluminium sulphate hexahydrate group 9=12829
    haemoglobin, of ox 9=9046
    harmine 9=7638
    hexadecanamide, phase transformations 9=9048
    hydroxydihydroeremophilone 9=7638
    methaemoglobin, horse 5=4200, 4212
    methylene—bio—nitrosohydroxylamine, K salt 9=13946
    cis D,L 11-12 methylene octadecanoic acid 9=13952
    1—methylthymine—9—methyladenine complex 9=13955

Crystal structure, atomic - contd
  organic compounds - contd
    muscle fibre 9=10441
    myoglobin 9=8777
    naphthalene 8=3591, 3593
    nitromesitylene 9=13948
    nuclei acids, irradiated 5=8357
      molecular structure 9=8782
    Nylon 7=2040, 2724
    octadecyl alcohol films, elec. field effects 9=4063
    paraffins, C—H distance 9=10202
      tense packing of molecules 8=8531
      electron diffraction 8=3594
    α-phenazine 7=6420
    phthalocyanine, electron diffraction, anomalous line spacings 9=7545
    poly—α—butene, isotactic, electron diffraction 9=3573
    polyamides, lattice structure 9=6379 [9=3573
    1—2 polybutadiene, syndiotactic, electron diffraction
    polychlorotrifluoroethylene, bulk kinetics 9=13895
    polyethylene, effect on i.r. spectra 7=2040
      irradiated 9=8869
    polyethylene terephthalate (Terylene) 5=1368
    polymers, electron diffraction 9=3573
    polypropylene, segmental motion 9=4030
      spherulites, formation 9=13890
      spherulites, orientation, birefringence 9=13957
    polystyrene, isotactic, by electron diffraction 9=3573
    proteins, electron microscopy 7=6757
    Rb fumarate monohydrate 9=10391
    α-resorcinol, by neutron diffraction 6=5542
    rubber, thermoelastic effects, in cyclic deform. 9=6324
    stearic acid films, elec. field effects 9=4063
    bio'thiourea-lead (II) chloride 9=13950
    toluene, and toluene—alcohol, frozen 9=11635
    triglycine sulphate, interplanar spacing 9=13218
    urea, anisotropic temp. factors appl. 7=880-1
    yellow wool dye 5=4213
Crystallization (See also Crystals, growth; Heat of crystallization).
    Beilby layer thickness det. 5=9173
    cataphoresis effect 5=619
    curve, theory of limit of stability appl. 5=8523
    electron emission during crystallization 7=451
    freezing nuclei, precipitation mechanism, ice crystal prod. 9=11659
    impurity distrib. in semi-infinite solidified melt 6=8030
    kinetics, infl. of diffusion 6=7804
    Liesegang reaction appl. to particle size det. 7=1797
    linear speed, influence of adsorbed mixtures 6=2529
    liquids, rel. to refl. of light 7=9108
    nucleation, influence of adsorption 5=5078
      non-steady-state problem 5=8546
      rate calc., supersat. soln. 5=5262
      time lag 8=78
    overvoltage phenomena, theory 5=2295
    precipitation, from supersaturated metal salt solns.
    recrystallization processes study 5=7492 [9=7846
    solute conc. around growing crystal 5=3491
    solute redistribution leg recrystallization 5=115
    statistical analysis 7=5718
    statistical theory 8=447
    thermodynamics 9=3213
    zone melting of decomposing solids 5=9232
    Al, cold-worked, recrystallization 6=6977
    Al alloys, rel. to microhardness 8=5517
    alkali halide solutions, temp. 5=5263
    alloys, cellular and dendritic freezing 8=4792
      metal, diffusionless process 8=5517
    $BaTiO_3$, from $BaCl_2$—$BaTiO_3$ melts 9=12865
    Bi films 7=6638
    butyl rubber vulcanizates, in adiabatic deformation
    Cu, recrystallized, Bi distrib. 5=4986 [9=6325
    Ga films 7=6638
    glass, effect of catalyst size 9=10285
    ice, aerosols as nuclei 9=7600
      heating of cracks 9=13898
      nuclei 7=6688
    KNO_3, capture of impurities 7=7486
    metals, low-temp. recrystallization 7=4858
      recovery and recryst., creep props. 5=5680
      single crystals, deformation energy 9=777

Crystallization - contd
  $Na_2B_4O_7$, from emulsions, liquid inclusions 9=12864
  NaCl, gas inclusion 5=6835
  $Na(NH_4)HPO_4$, from emulsions, liquid inclusions 9=12864
  $NaNO_3$, liquid inclusions, temp. depend. of behaviour
  pentaerythritol, elec. charge effects 5=2294 [9=12863
  polyethylene terephthalate, by stretching 8=1333
  polymers, high, kinetics 5=5705
    light scattering 5=4570
    non-polar, effect of dielec. losses 9=13250
  polypropylene spherulites 9=13890
  Rochelle salt, domains 6=7005
    surface treatment by recrystall. 8=7597
  rubber, Young's modulus 5=9994
  salt particles in spray, shatter theory 5=3332
  Sb, evaporated layers 6=721
  Se, films on KCl, elec. resistance variations 9=4592
    Tl-doped, evap. films, ring structure 7=6690
  Si, floating zone method 5=4174
  Si—Fe alloy, recrystallization texture 8=9177; 9=12862
  steel, transformer, effect of "collective" recrystallization
    on texture 9=11220
  water, ion separation 6=963
    supercooled, oriented 7=5270
  ZnS-type compounds, rel. to short-range order 8=7593
Crystallography (See also Electron diffraction crystallography; Neutron diffraction crystallography; X-ray crystallography).
  applications of equal density photographs 5=2292
  considerations of spatial and temporal asymmetry 5=1490
  ferroelectric phases, symmetry 7=8254
  magnetic crystallographic groups 9=9756
  morphology and structure relations 5=4169, 10056-7
  paper representations of noncubic classes 5=1344
  transitions and phase rule 6=8460
  use of electrical breakdown paths 6=7810
  wire models, jig for 8=6497
 mathematical
  antisymmetry and symmetry in space-group theory 8=444-6
  cartesian symmetry groups, tensor components 8=4516
  close-packing principle appl. to dividing mechanism 8=2826
  close spherical packings, rational calc. 7=8253
  Cosserat continuum, statics and kinematics 9=11868
  edge dislocations, construct. 6=3348
  geometrical basis of crystal chemistry 5=4166-8, 4213;
  lattice sums 9=5240, 11619 [6=8461
  non-centrosymmetric space groups, choice of origin
    phase det. theory 7=891 [6=7833
  packing in framework structures 7=842
  paraffin crystals, phase-change theory 9=5645 [9=7591
  paths in crystals, det. of crystallographic directions
  plane lattice and close-packing of circles 8=1364
  point groups, and their interpretation 8=5515
    of isotropic medium in tensor fields 8=3555
  structure factors, signs, statistical analysis 6=7841
  symmetry groups, ray representation 9=13883
    superposition 7=9958
  symmetry systems, theory 5=8315
  tetrahedral (T = 23) and gyrohedral (O = 432) groups
  unit cell, primitiveness, theorem 9=11630 [9=11629
Crystals (See also Liquid crystals).
  AgCl, elasto-plastic bending 7=2742
    polycrystalline plates, optical study of strained
      state 9=8009-12
  Al, deformation by explosive 6=730
    plastic deformation 6=7764
  alkali halides, prep. for elec. strength tests 7=1351
  alloys, plasticity theory 9=4050
  anharmonicity effects 9=8795
  anisotropic cubic crystals, theory 8=3450
  atomic beam interaction 9=13736
  Ba nitrate, thermal expansion coeffs. 5=4588
  $BaTiO_3$, single crystals, elec. behaviour at low temp.
    surface space-charge layers 6=5078 [5=8732
  Bertaut series, optimum atomic shape 7=2796
  cage zone refining, Ti appl. 5=5077
  CdS, effect of glow discharge 6=5866
    effects of size, surface and deformation on absorption
      edge spectra 9=5542
  cleavage cracks propagation 7=1726
  cohesive properties of solids quantum theory, review
  convex-core model of crystalline state 9=13768 [6=7562

Crystals - contd
  crystal physics, conference 8=3444
  Cs halides, plastic deformation 7=8223
  Cu, surface self-diffusion 7=1670
    thin crystals, deform 6=5457
  cupric salts, behaviour of paramag. ions 7=6712
  CuI, X-ray intensity reflect. rel. to temp. 8=7606
  detonation of large single crystals 8=547
  dielectric, absorption of ultrasound 8=4804
    anisotropic 9=6886-8
  direction dependence of energy 8=8414
  electrolytic saw for strain-free cutting 9=4192
  e.m. wave propag., absorption 9=12796
    group vel. and energy flow 9=5471, 11977
  electron—lattice interactions, conductivity theory 7=357
  energy levels of ions 8=5777
  eq. of state for Zn, Cd, Mg 8=4405
  Fe, tensile props. of single crystal 6=4049
    whiskers, high-temp. oxidation 9=12868
  Fe-group hydrated salts, covalent bonding 5=2974
  FeTe, elec. props. 7=1293
  ferromagnetism, spin-wave theory 9=1577
  g-values, e.s.r. det. 9=7182
  garnet ferrites 9=13442
  Ge, detection of coherent bremstrahlung 9=13537
    microscopic study of properties 7=1281
  graphite, artificial, conical shape 7=896
  ice, habit, rel. to growth conditions 8=6502
  interaction of atom with crystal surface 8=5476
  intermolecular transfer of excitation energy 7=4225
  inverse-power particle-interactions, lattice sums 9=773
  ion pairing 7=4868
  ionic, current-carrier and F-centre interaction with
    acoustical vibrations 8=2661
    elementary excitations 8=3457
    formation and decomposition, rel. to dielec. props.
    nuclear quadrupole coupling 8=9072 [9=9582
    point charge interaction 6=8470
  irradiated, stresses and small deformations 9=13798
  KCl, with subst. $CaCl_2$, elec. cond. rel. plastic deformation
  $KClO_3$ thermal expansion 5=2665 [8=3091
  LiF, interaction with incident He atomic beam 9=13736
  light scattering 5=1740
  luminescent energy transfer processes 9=2919
  Mo theory of interaction of atom and crystal surface
  Madelung constants, cubic crystals 7=7494 [9=10263
    NaCl-type crystal 7=8265
    simple crystals 8=6393
    use of Born's and Hund's potentials 9=7488
  mag. ordered configurations on simple lattices 9=8796
  matrix components of energy 7=7492
  metals, plasticity theory 9=4050
  MgO, crystallite size rel. to heat of solution 7=1758
  morphology rel. to structure 5=4169, 10056-7
  motional effects, n.m.v. study 9=12479
  NaCl, grain-boundary energies 9=4038
    needles, bending 6=9027
  Nd salts, crystal field 6=8665
  nuclear relaxation, due to paramag. impurities, relaxation
    length 9=8358
  Pb nitrate, thermal expansion coeffs. 5=4588
  perfection of single crystals, det. method 7=6755
  perovskite-type, potential countour for ions 7=7495
  points, electron beam study 9=5187
  polar, Bogolyubov—Tyablikov perturb. theory extension
  polar model 9=13775 [8=7504
  potential energy and elasticity 7=7491
  pure quadrupole resonance Hammett's σ-values 8=388
  quartz, dislocations, relaxations and anelasticity 6=4091
  relaxation processes 9=4039
  Rochelle salt, ferroelec. Barkhausen pulses 6=2064
    surface treatment by recrystll. 8=7597
  scatt. of neutrons on polarized nuclei 8=7254
  Se, bending rel. to crystal growth 7=852
  semiconductors, field gradients and symmetry 8=177
  Si carbide, furrows on surface 5=7495
  spin and polar excitation statistics 9=12795
  spin systems, interacting, in rigid lattice 9=6225
  spin—orbit coupling, calc. 8=6401
  Sr nitrate, thermal expansion coeffs. 5=4588
  surface energy, alkali halides 7=7493
    electrostatic term 9=779

Crystals - contd
surface energy, magnesium oxide 7=1473
thermal vibr. of atoms calc. from spectra 5=9801
Tl halides, plastic deformation 7=8223 [8=3445
wave interactions, elec. and thermal conductivity theory
wedge-shaped monocrystals, interference fringes in electron micrographs 9=2966 [8=7515
X-ray and neutron scatt. near 2nd-kind phase transitions
Zn, single crystals, slip due to torsion 7=3769
twisted crystals, flexural rotational slip 6=734
electron states (See also Colour centres). [9=8829
AB$_3$-type alloy, ordering of electron conduction bond
absorption of polarized e.m. radiation by mobile electrons 8=2647
atomic electron excited state in 1-dimens. lattice 5=7508
average crystal potl. calc. 5=8381
B-subgroup metal compds., paramag. contrib. to suscept. and n.m.r. 9=13477
bands, degenerate, Stark effect for cyclotron reson. 9=8851
forbidden width, semiconductors and insulators, from diffuse reflection 9=12132
structure, by X-ray spectroscopy, review 9=12783
structure (conf.) 5=2914
structure of mixed linear lattices 6=6040
Bi-type crystals, band structure 9=10256
b.c.c. lattices, d-band structure 9=13785
electron state density 6=7817
3d-band, LCAO method 9=13784
transition metals 8=5465
body-centred iron 6=8468
Bohm—Pines' generalized theory 9=6245, 8834
Brillouin zones of intermetallic compds. 5=5112
charge carriers, negative effective mass, energy absorption 9=8833
close-packed hexag. lattice, spher. harmonics 6=4535
collective vibrations of electrons 8=8420
"complex" crystals, band structure 7=3819
complex ions, mag. moment and g value 7=4531
conduction electrons, Boltzmann transport eq. 8=5470
capture by charged defects 7=5726
movement in luminescence 5=3629
scattering 5=5733
Coulomb potentials, lattice sums calc. 9=8789
at a crystal defect 5=7509
crystal field, effects on ferromag. anisotropy 8=1764
icosahedral symmetry 7=9450
interionic separation 8=9109
term splitting 7=6711
and X-ray absorpt. edges of metal ions 7=437-8
crystall. field and complex ion absorpt. spectra 5=2591-2
cubic crystals, calc. from conserv. laws and symmetry 8=4413 [5=5316
d-electrons in crystal fields of different symmetries
dielec. breakdown theory, non-ionic crystals 7=1259
Dirac electron, spin—orbit coupling and time-reversal degeneracy 8=808
disordered 1-dimens. crystals 7=4862
distorted crystals, equilib. states, wave-functions 9=10242
double covalent bond, evidence 6=5237
effective electron mass, meas. 9=2905
effective electron radius, in lattices 9=8823
effective single-electron potential 7=2811
eigenvalues, plane wave methods 6=7013
electric field gradients, in ionic crystals 9=819
l.f. quadrupole resonance 8=9126
electroluminescence, electron traps 6=6541
electron and hole motion in perturbed lattices 9=2903
electron bombardment conductivity 5=8772
electron capture in crystallophosphors, energy level depths 5=1719
electron distribution, vibrational modifications 5=4178
electron gas, in potential field 8=2799
slightly non-ideal, props. 5=7222
electron, in 1-dimensional periodic potl. field 9=8830
electron in periodic elec. and mag. field 7=6704
electron in periodic elec. and uniform mag. fields 8=2029, 4414
electron-nuclear wave-functions in multiphonon processes
electron—phonon interactions 9=12785 [6=7816
intermediate coupling 5=5084
resonance 9=12786
electron spin—spin interaction 7=2458

Crystals - contd
electron states - contd
electron theory of crystals (book) 5=622
electron tunnelling within insulators 5=5724
electrons and plasmons 9=780
electrophotography, theory of latent image formation
electrostatic potential 7=5723 [9=12928
energy and momentum spectrum at absolute zero 6=5266

  on Ni surface 7=7480
  self-diffusion in ortho—para conversion 6=6990
  in Si at high temps. 7=8903
  through steel, electron tube detector 6=6950
  in mild steel 9=850-1
  on W, surface migration 7=6671
  in ZnO 7=2239
He, diffusion from natural NaCl crystals 5=1285
  in Ge at high temps. 7=8903
  in Si at high temp. 7=8903
Hg, in Se 8=1336, 4459
In, in Ag single crystals 5=1286
  in Ge 5=7414
  in Sn 9=841
  in ZnO 9=8882
in InAs, of impurities 6=8198
in InSb, of In, Sb and Te 7=8904
inert gases, in metals 8=1338
  in W 9=11130
K surface diffusion on quartz 5=2234
in KCl, neg. ion vacancies 8=3477
Li, metallic, self-diffusion 6=7743
  self-diffusion, tracer study 9=11590
Li^7, activation volume, by n.m.r. 9=11588
methane, self-diffusion 7=6633
Mg,through MgO layer on Ag-Mg 6=1644
  in Ni 9=12815
  in Ni and Ni—Mn, diffusion coeff., rel. to cathodes 9=8880
Mg^{28}, in MgO 7=3753
Mn, in Cu 9=13812
N, in Fe, emission into vacuum 9=7849
  in Fe, pressure effect 3=3476
  in α-Fe, activation energy 5=8304
  in α-Fe, expt. and theory 6=4683
  in group IV - VI transition metals 7=1668
Na, self-diffusion near m/pt. 5=3164
Ni, in Cu 9=845
  impurities in cathode Ni 8=8456
  in NiO 7=5664
  in PbS single crystals, < 500°C 9=1891
  self-diffusion 5=6539
Ni—Fe ferrites, in low-temp. acoustic relaxation 5=2230
noble metals, self-diffusion, in radn. damage recovery 5=6536
O, in vitreous GeO$_2$ 9=10286
  in Plexiglass lattice, fading of X-ray discoloration 9=8862
  through Pt, 1425°C 8=7530
  in Si 8=811; 9=3546
  in UO$_2$ 7=8239
  in UO$_2$, self-diffusion 8=7531
  in V 9=2946
  on W surface 8=6487
O^{18} in CdO 9=2950
P, α, white, self-diffusion 5=8307-8
  in Si 5=1827; 9=6305, 13811
Pb, in PbTe 7=4800
  self-diffusion 5=9983
  self-diffusion, effect of pressure 9=8886
in PbSe and PbTe, self- and impurity diffusion 8=9137
polyethylene, self-diffusion 9=13763
in polymers, of small molecules, activation energy, temp. depend. 9=11540
  under irradiation, CCl$_4$ in polyvinyl alcohol 9=11585
in polystyrene, sorption method 5=5243
polybinylchloride—plasticizer boundary diffusion 9=848
Ru, in Ag, 793-945°C 9=8890
Si, in Ni, effect of plastic deformation 8=4460
  in PbS crystals 5=3770
  in Si 9=6979

Diffusion, solids - contd

Electron diffraction - contd
  Boersch ray system, diffraction pattern correction 6=7851
  camera, for high temps. 5=5116
    high voltage 9=3572
    with magnetic focusing, appl. to thin films 5=1891
    reflection, combined with electron emission microscope 9=3571
    simplified 7=1372
    vacuum plate-camera of large capacity 7=3761
  continuous recording, appl., for diffusion studies 9=8227
  cryostat 9=3405
  by crystals, containing heavy atoms, multiple elastic scatt. 6=5931
    review of theory 8=3445
  deformation of rings by lens aberrations 5=3819
  diffraction fringes in electron optics 7=5377-8
  diffuse spots, inelastic scatt. as cause 5=6208
  electron microscope adaptation 9=8223
  electrostatic filter, Boersch type, improved contrast 9=8221
  equipment, four types 5=7108
  by free molecules 5=8120
  by gas molecules, rapid analysis of data 9=12754
  intensity distribution, finite source effects 9=10392
  intensity rel. to crystal size of evap. films 8=8476
  interference effects in electron micrographs, theory 5=643-4
  lines and bands at 1 MeV, rel. to theory 5=8822
  magnetic analysis of alloys 8=6038
  by magnetic domains in Co 8=651
  in metals, interaction with inelastic scatt. 5=4725
  micro-diffraction, with electrostatic velocity filter 9=13375
  moiré patterns 7=6264
  by molecules, multiple elastic scatt. 6=5930
  moving film and slit arrangement, with heating device 9=2963
  non-photographic images 9=1899
  patterns, energy analysis 5=7109; 7=9234
  punched card method for calc. sums of products 6=4146
  radial distribution analysis 8=8402-3
  by restricted aperture, scalar theory 8=2258
  review, rel. to electron-optical biprism 9=336
  specimen chamber with vacuum lock 5=1298
  by very small metallic crystals 7=7511
Electron diffraction crystallography (See also Crystal structure, atomic).
  adjustable aperture and deflector plates for monocrystal study 7=9470
  analysis of microscopically observed pattern 5=4215
  app. with built-in cathode sputtering unit 6=4685
  Boersch ray system, diffraction pattern correction 6=7851
  changes with time in Ag and Cu sulphide and selenide structures 6=5543
  combined catalysts 8=437
  conference (Reading, 1956) 7=7456
  contamination from Cu specimen-grids 8=419
  correl. with X-ray crystallography 7=902
  crystal orientation study 7=914
  crystal points 9=5187
  crystallites, formulae for reflection intensities 8=3595
  crystals containing heavy atoms, multiple elastic scatt. 6=5931
  crystals with stacking faults 7=8950; 8=1371
  Debye—Scherrer diagrams of thin layers 7=868
  with different wavelengths 7=5750
  diffraction attachment to electron microscope 8=8478
  diffraction by very small metallic crystals 7=7511
  diffraction camera, combined with electron microscope 7=9717
  dynamic and kinematic scattering distinction 7=8301
  electron elastic scatt. in Kikuchi patterns 6=5541
  error calc. tables, for energy, film radius and diffraction ring radius 9=10396
  errors due to crystallite orientation 7=911
  extinction effect, primary, correction 9=7653-4
  extraction replica method for inclusions in steels 7=7510
  fine structure of patterns 6=7853
  fine structure studies 6=7852
  Fourier coefficients, in thin single crystals 9=4117
  Fourier methods in structure analysis 8=7615
  Fourier series potentials, accuracy 7=8303
  Fourier syntheses of data 5=5118
  image recording by xerography 7=6756
  imaging effects, for superimposed thin crystals 9=9049
  inelastic scattering effects 8=7613
  intensity curve normalization 7=9979
  intensity meas., by CdS single crystal 6=820

Electron diffraction crystallography - contd
  intensity meas., with G.M. counters 5=3290
  intensity of reflections, kinematic theory 7=6753-4
  intensity reduction, central, by double-disk sector 9=7656
  interference spectrogram eval., comparison with theory

Fibres
  Amilan, undrawn, stress relaxation 5=3190
  bundles, breaking strength 8=6460-1
   mechanical breakdown, time dependence 9=7555
  cellulose, X-ray intensity normalization const., error, calc. 9=7635
  collagen, equiv. of electron-microscope and X-ray obs. [6=3309
   small-angle X-ray diffraction exam. 6=2557
  cotton, fractional force and fibre properties 9=11610
  Dacron, elastic moduli 5=8316
  diameter meas., microscope method 5=1566
  dilute suspensions, plug flow through pipes 9=13055
  electron microscopy, beam intensity value 5=2238
   conference 7=5673
   reflection tech. 5=1297
   replicas for 5=7425; 7=7454; 8=2681
  fibre mats as filters for aerosols 6=1707
  fibrous proteins, H/D exchange effects 9=5218
  friction and lubrication 7=3778
  friction meas. 9=8947
  glass, drawing, cooling-time eqn. 8=3028
   laminates, photoelasticity 5=8667
   optical and mech. props. 8=2939
   optical props. and surface structure 7=5950-1
   phase-contrast microscope study 6=6898
   as reactor fuel elements 8=4348
   sized, acoustic absorption 8=3811
   strength meas. 6=3325
  mechanical breakdown, statistics and time dependence 9=881
   under oscill. load, time dependence 9=882
  mechanical testing, review of problems 8=3505
  metal, texture study, by X-ray diffractometer 8=9145
  molec. structure and testing of 8=4450
  natural and synthetic, i.r. absorption study 5=843
  Nylon, elastic moduli 5=8316
   6.6 nylon, structure 7=2724
  optics, image quality 9=9503
   light leakage 9=9502
  orientation in elec. field 5=5396; 7=1260
  photoelastic effects 5=880
  physics of, review 9=1887
  polyamide, proton mag. reson. struct. study 5=9803
  polycrystalline, orientation X-ray study 8=1369
  polyethylene, extrusion flow curve 8=3514
  polyethylene terephthalate, crystallinity rel. to visco-elastic props. 5=2288
   crystallization by stretching 8=1333
   structure 5=1368
  polymer, oriented, birefringence rel. 5=3159, 8669
  polystyrene, retraction mech. 5=10014
  quartz, fused, props. and production 7=5782
   sputtered with Au 8=5721
  ramie, water absorpt. mech. 5=4992
  refractometer utilizing fibres 8=1590
  silica, in fibre pendulum vacuum gauge 9=1160
  silk, piezoelectricity 7=7853
  spaces in a uniform random suspension 9=5389
  specimens for i.r. absorption meas. 9=7769
  strained, absorption of fluids, thermodynam. relations [5=8540
  stress relaxation, diffusion controlled 5=9183
  structure, X-ray conference report 7=2732
  sulphur, fibrous, structure 8=3473
  textiles, shrinkage, meas. 7=311
   soiling by atmospheric pollution 8=7622

Fibres - contd
  Ti and U, fibre-texture 7=1667
  traversing cylinders, friction coefficient 9=888
  twisted cords, geometry of 8=3522
  viscoelastic, mechanical behaviour 6=4682
  viscous flow past, electric network analogue 9=9292
  W filaments, non-sag, grain growth coarsening 6=5437
  wool—water systems, dielec. props. 5=278; 7=2163
   stress relaxation 5=6554
  X-ray diffract., theory 9=7609
  X-ray scattering 5=6547, 9172
Field theory, classical
  action-at-a-distance, theory 5=8517
  book 9=1041
  boundary conditions, for scalar and Maxwell fields 9=1018
  conformal reciprocity theory, field non-linearity 8=4721
  e.m. field, nonlocal variant 9=10583
  e.m. fields in vacuo, metrical connections 9=3112
  equations of motion, connection with field equations 9=10557
   "equivalent" potential 5=30
   in general relativity 9=28
   in symmetric meson field 5=735
  fluids with spin 7=7590
  generalization of field theories and quantities 9=1040
  geometrodynamics, variational principle 9=12984
  gravitation, energy of field 9=11783
   Lorentz invariant theories 9=11782
   self-energy of a particle 5=9399
  in Hamilton—Jacobi formalism 5=3420
  Hamiltonian formalism and energy—momentum tensor [7=6868
  Heizenberg's non-linear eqns., classical soln. 9=1049
  without Lagrange formalism 8=7693
  Langrangian formalism, canonical transformations and commutators 6=7118
  Lagrangians linear in the 'velocities' 5=7677
  linear, field eqns. and eqns. of motion of sources 9=9172
  localization domain of field states 8=4719
  meson theory, introduction 6=4197
  Poisson brackets, for covariant fields 9=2041
  Poisson's eqn, 2-dimen. soln. for var. boundary shapes [9=4318
  reaction of field on source 8=4720
  self-acceleration and similar effects 8=3700
  spin wave, appl. to microwave resonance 5=1042
  stress tensor in field dynamics 5=1507
  superconducting state theory 6=375
  unitary variation principle for mechanics, electrodynamics and gravitation 6=1841
Field theory, quantum
  action conservation laws, in e.m. null field 9=9187
  action as space coordinate 5=34
   appl. to mesons 5=33
  angular momentum, in non-spherical fields 5=2397, 5863
   of a real field 5=2398
   in sphero-conal coords 9=6534
  asymptotic conditions 9=6511
   and causality conditions 9=9238
   states of orientated particles 9=2098
  "backward" uniqueness of non-conservative fields 6=52
  basic assumptions, examination 6=902
  bilocal fields 7=2981, 3947, 8394
   mass selection rules 8=2780
   Rayski's theory 6=5681
   spin and isospin particle classification 9=6506
  Bloch and Nordsieck's divergence 5=9406
  boson fields, Larmor invariance 8=1528
  boson mass spectra 6=7978
  boson system 9=5375
   non-ideal, ground state and excitation spectra 9=9255
  bound state problem 9=2038
   causal development with relative time 5=5862
  boundary conditions, for scalar and Maxwell fields 9=1018
  Cauchy's problem 8=500
  causal commutators, integral representation 8=38
  causality 7=1888, 3948, 8986
   phys. realizability 8=2810
   critical review 9=4270
   for all virtual particles in any scatt. process 9=9198
  charge conjugation, 2 analogous transformations in 2nd rank spinors 9=7785
  charge independence, generalization 7=6875
  clothed particle operators 8=4723
  collective oscillations of a shell struct. of particles 6=6066

Field theory, quantum - contd

- dense fluid of hard spheres 7=1945
- diabatic, and fundamental wave mechanics 8=7731
  - multiplicity theorems and solns. 8=7729-30
- with diffusion and chemical reaction 9=10679

Flow - contd [8=5685
diffusion of reacting species in laminar boundary layer
dimethyl siloxane polymers, power law curves 9=9286
in eccentric annulus, Green's function soln. 9=3193
electrically conducting compressible fluid 8=539
flow formation, with suction or injection, boundary layer control 9=2130
flow noise, conference 8=3836
fluid, into porous medium filled with fluid 8=4791
parallel to wall, heat transfer 7=7051
rotation, relativistic theory 8=2129-32
force on lattice of elliptic cylinders 9=11887
force on random distrib. of chlinders or spheres 9=11888
free—boundary, in electrophoresis at high flow-rates 9=12317
frictionless, growth of secondary circulation 6=107
gases and liquids, method for integration with viscosity and temp, 6=5713
in glacier ice 7=2856-7
patterns 6=4745
through granular solids 7=7545
helical, of general fluids 9=13053
hydromagnetic stability problems 7=4002
impact of bounded stream on plane lamina, butterfly valve design 9=5399
internal ducted, flow coefficient 8=4783
inviscid, fluid, past wedge, general hodograph eqn. 9=87
past bodies in uniform stream 8=900
laminar, in annulus with porous walls 8=8609
in channel, heat transfer 9=6822
in channels with porous walls 6=6409; 7=1943
entrance region of porous pipe 9=13058
non-Newtonian, in tubes, heat transfer 9=4514
between parallel plates, heat transfer 9=10902, 10904
periodic, in cylindrical tube 9=90
stability in curved channels 7=4004
stability of wakes 8=5691
steady-state magnetohydrodynamic flow in an annular channel 9=9864
lift on two cylinders, elliptic, and drag coeff. 9=89
in uniform stream 8=5678-80
limiting current at stationary wire electrodes 9=10349
mass transfer across boundary layer 5=3673
microscopic eddying near u.s. tool tip 9=9287
Navier—Stokes eqns, solution 9=8386
non-Newtonian, solid plastic system 5=8329
in non-rigid tubes, non-linear theory 9=96
past a boundary, effect of sound reflection, absorption and transmission 9=9329
past cylinders, evenly spaced, electric network analogue, appl. textile fibres 9=9292
Rayleigh's and unsteady flow, problems 6=5717
regularly-spaced, infinite, elastic strip analogue 9=5398
past plate, free streamline theory 9=10654
oblique, with wake perfect fluid calc. 9=13059
past sphere at high Reynolds number 6=4881
in pipes, transition to turbulent flashes 8=5686
Poiseuille type, stability 8=7732
polyethylene, end corrections in capillary flow 8=66
through porous media, asymmetry of conc. front 9=3187
statistical theory 9=104
pulsating, thermal flux produced 6=7341
reacting and relaxing fluid 7=5909
reactor coolants, meas. of 8=4339
rotating fluid past bodies in pipe 6=2709
shear, influence on sound propag. 6=8048
solid—air systems, through small holes 9=9295
solid-grain dispersions, in fluids 7=6630
sound wave attenuation in steady flow 9=9331
spherical from collisions of shock waves 9=13098
steady-state bubbles generated by Taylor instability 8=534
Stokes' paradox, analogue for 8=3758
subsonic, 2-dimens. irrotational, reciprocal property
transient, in porous media 7=5916; 8=4790 [9=10652
through tubes, rel. to acoustic waves 7=1138
turbulent, between two concentric cylinders 7=7647
in curved channels 7=3046
in curved channels, heat transfer 7=7646
laminar sub-layer separation 8=3759
shear, Reynolds stresses 6=7179
two-phase, condensation interfaces 8=8610
underground fluids in compressible strata 9=7825

Flow - contd
unsteady 2-dimens. flows with free boundaries 6=4231-2
viscoelastic, fluid, hydrodynamic theory 8=64
network theory 9=11604
viscous, around spheres 5=7756
compressible fluid, laminary detachment 6=3520
fluid layer 7=7645
fluid, past two cylinders 6=6410
gyroscopic phenomena 7=7644
non-steady, past solid sphere 9=92
one-dimensional, integration theory 9=13054
past inclined porous plate, bouyancy forces 9=10651
past row of cylinders 8=4780
past spheroid 8=3755
past thin screen at low Reynolds no. 9=10653
reciprocal relations 5=3466
shear flow round cylinder 6=5716
stationary motion, around rotating sphere 9=6573
(Szymański), 2-dimens., stability 9=11881
thermal stability, in insulated channels 9=6830
use of diffusion eqn. 7=6929
water or gases through soil, electrostatic analogue 8=5856
gases (See also Acoustic streaming; Aerodynamics; Anemometers; Supersonic flow).
aerodynamic fields of flow, chronophotog. 6=4884
air, centripetal effect, appl. to pump design 8=2183
effect on sound attenuation in absorbing ducts 8=8662
effect on vaporization of camphor and naphthalene spheres 9=12178
flow-interrupter, for respiratory work 8=3618
flow resistance of porous building materials 9=1224
fluctuating press. of cylinder in stream 8=3786
high-speed, schlieren study 5=8435
rarefied, thermal invest. 6=1899
streams into l.p. chambers, jet shape 8=7735
in tubes, turbulent to laminar boundary layer transition 9=9288
boundary conditions, with slip at wall surface 9=2148
boundary layer, along flat plate 7=7664
over flat plate under press. grad. 9=1164
on cylinder with suction 7=5118
growth in three dimensions 5=794
method of separating gas mixtures 9=6614
noise from 7=4049, 5147
on plate with suction or injection 7=5119
shear stress meas. 7=163
capillary tubing, with eccentric annular sections 9=6574
centripetal-pump effect in air 7=8458
compatibility equations 6=3552
controlled capillary leak 7=1968
coolant in channel 5=9478
through cylindrical tubes 9=1163
device for moving interferometer fringes 6=8707
due to impulsive wedge motion 5=3497; 7=161 [9=9316
around ellipsoid, subsonic, with circulation, vel. distrib.
entrainment and turbulence in open streams 5=4429
evaporation of solid or liquid into flow path 9=256
excited gas streams, spectroscopic observation 5=1666
field of a flame in a channel 9=4359
field of Bunsen flame 8=3036
Guderley—Barish soln. for sonic flow 6=129
heat-driven oscillations in gas flows 9=4369, 10697-9
high-velocity, heat transfer and hydraulic resistance
temp. meas. 8=2283 [7=6101; 8=3926
hydrodynamic eq. with linear vel. dependence 6=974
impulsive motion of an infinite plane 9=121
ionized gas, unidim. flow 7=7234
isentropic relativistic flow 7=1967
jet against wall 6=4883
Knudsen flow through circular capillary 5=7751
laminar, in shock tube 6=2746
laminar—turbulent transition in boundary and separated layers 6=7203
method for meas. film thickness 6=8014
method for surface meas. finely divided solids 5=1289
in microporous media, behaviour of adsorbed molecules 5=1290
mixing, effect of sound and temperature fields 7=4068
mixtures, diffusion—viscous flow interaction 9=122
diffusive separation 9=1154 [5=9480
molecular, elliptical cross-section pipe conductance
free, and with foreign gas, in porous system 6=2719

- Flow - contd
  - gases - contd
    - molecular, free, drag on bodies 6=4882
      - free, slip flow 5=9455
      - free, total pressure 6=3551
    - noble gases, through porous media and capillaries 8=7741
    - nonlinear effects in flow past obstacles 9=10689

  - bery-low-speed, apparatus 5=2261
- slip in plastic compression, theory 8=8487
- between solids, effect of dust on contact 7=3777
  - at high pressure 7=806
  - reduction by frictional heating 6=1667
- static and dynamic, diff. due to creep? 6=2485
- static and kinetic, rel. 5=4139
- static, reduction by sonic vibrations 9=13870
- steel, on bronze, Cu and Zn selective diffusion 7=9436
  - effect of surface oxides 8=7574
  - heating effects on wear 8=6469
  - mild, friction in fretting corrosion 6=7771
- "stick—slip", method for recording 5=1304

Friction - contd
- strain-gauge system for friction studies 5=7447
- strings traversing cylinders 9=888
  - slantwise, on cylinders 6=8439
- surface, of solids 7=2760, 5692
  - rel. to heat transfer 7=9437
- Teflon sliding on Teflon 5=7448, 9199
- thermal desorption of boundary lubricant 9=889
- in tippe top theory 5=767; 6=2704, 4222
- two-term law, exp. verification 8=6680
- at vibrating contacts 6=6224
- and wear, under boundary conditions 8=4496
  - coefficients 9=887
  - relationship 9=8943

internal (See Internal friction).

Functions
- Airy, in potl. barrier problem 6=8600
  - in $y^{11} = (ax + b)\, y$ soln. 8=479
- arc sin Z, tables (book) 6=6285 [6=3876;7571
- auxilliary, for 2-centre integrals, machine computation
- Bessel, asymptotic props., and synchrotron radn. 5=2796
  - relation to elliptic integrals by delay line 5=7619
  - in soln. of equation 5=8437
- Cauchy's problem, in relativity 7=6846
  - and soln. of wave eqn. 6=4769
- characteristic and generating functions, use in physics
- circular coverage, P, physics appl. 6=865 [8=478
- complex conjugate, method of obtaining 6=2602
- correlation, for noise fields 5=150
  - scattering by inhomogeneous solid 8=6433
  - of stationart time series, det. 5=2360
- Coulomb wave, numerical treatment 6=1863
- critical points location, topological methods 9=7720
- Do(x) and $D_1'(x)$, tables 5=5163
- delta-function and linear systems 7=1936
- $\Delta_4^{(+)}(\xi;a)$, integral representation 9=5355
- Dirac's δ -function, appl. to isolated force problems,
  - elasticity 6=3509
  - definitions 7=1839
  - extension 7=3894, 5023, 6864
  - props. and appl. 5=1520
- Dirac, generating, existence 5=5217 [9=10493-4
- Dirichlet's and Neumann's problems, analogue solution
- discontinuous, in electrostatics and magnetostatics
  - 6=3704
- distribution, for complex amplitudes, appl. to crystallog.
  - density expansions 7=8577-8 [5=5103
  - and spectrum functions, maxima 7=1838
- eigenfunctions of betatron oscill eqn. 7=7089
- elementary transcendental, loci 5=2354, 4282
- elliptic, fractional power series 9=9271
- entire, appl. to scattering matri 8=5646
- error, and deriv., tables 5=3386
- exponential, with unknown asymptotes, numerically
  - plotting 9=9129
- Fermi—Dirac, tables 7=7544
- function complexes and algebra, appl. to Green function,
  - general wave eq. 5=710
- function generators in analogue computing 6=5597
- gamma function for complex arguments, table 5=3384
- Gaussian, use in Lennard—Jones potential 8=1297
- generalized field functions, use of quaternions 8=498
- generalized singular functions 9=9127
- generation , from linear segments 7=4963
- Green's, asymptotic behaviour 8=7681
  - derivation of free-space scalar 6=7099
  - in e.m. wave diffraction by cylinder and sphere 5=2023
  - inter-relations 7=8350
  - for Maxwell's e.m. eqns. 9=464
  - parametric representation in field theory 8=872
  - particle singularities in field theory 9=11826
  - in quantum field theory 6=57
  - radiation appl. 5=2544
  - in radiation diffusion eqn. 8=1647
  - solution of neutron kinetic eqn, 7=5056, 5846
  - spectral representations 8=7682
- Hamiltonian, computing for conservative systems 8=527
  - 2nd-order transformed, tables 9=5111
- harmonics, expt. extension 8=7645
- histographic, inversion of product of composition 6=7098;
- $Im(\xi)$ and $Wm(\xi)$, tables 5=4321 [8=1407
- "indicative", appl. to radioactive spectra 7=2569, 4959

Functions - contd
  invariant analytic, appl. in quantum field theory 8=2158
  'jump function', in computer system freq. anal. 5=4281
  Kramers—Kronig relations, immittance kernels 6=7170
    realizability 6=7169
  Lagrange, invariance props. for fields 8=8572
  Laguerre, coeffs. for decomposition into series 7=6804;
    tables and props. 6=5596, 7100 [8=1408
  Legendre, and associated functions (book) 8=2089
    and Gegenbauer, generalized 8=1409
    and spheroidal, (book) 9=6435
  meta-derivatives and anticommutators 9=977, 11707
  network, rel. to physical realizability 7=125
  numerical integration in logarithmic form 6=3
  potential, Dirichlet problem soln. 6=2702
  S, appl. to transition probabilities for atoms 6=1495
  scattering, explicit potentials 8=886 [6=7535
  simple algebraic or transcendental, appl. to mag. curves
  spherical harmonics, explicit expression in ang. coord. 9=2
    for geomag. field description 9=5266
    thermal neutrons flux theory 8=8360
  spheroidal, some math. props. 5=2353
  statist. distrib. function assoc. with a phys. magnitude
  Thomas—Fermi, approximate solution 7=3559 [6=4849
  toroidal 9=7721
    appl. to calc. of capacity of a tore 9=8062
  transcendental, with zeros related to Hankel functions
  transfer, for annular aperture 6=3650 [5=2355
  for 2-dimens. continuum, specific heat 7=7069
  use in solving basic electron-optic equations 5=1886
  Wannier, orthogonalization and localization 7=3893
    in solid-state theory 8=8425
  Weber, asymptotic expansions 9=10492
    tables 6=4144
  and zeros of functions, tables 5=3385
Fundamental concepts (See Physics fundamentals).
Fundamental constants (See Constants, fundamental).
Fundamental particles (See also Baryons; Field theory, quantum; Leptons; Nucleons; Nucleus; Particle detectors; Quantum theory; Scattering, particles; and individual particles, e.g. Electrons, Mesons).
  $a + a^1 \to b + b^1$, reaction matrix det. 9=1754, 3885
  action of charged particles on emulsions at low ionization
  algebra of, parity non-conservation 9=7775 [9=14008
  annihilation or pair-production, covariant eqns. 8=5167
  antiparticles, isobaric spin and description 7=5848
    isotopic spin 6=1853
  with arbitrary spin, ang. distrib. of decay products 9=7239
    elastic scattering 8=1816
    hydrodynamic model 6=911
    polarization, in elastic scattering 9=12604
    theory, regularization 5=3436
    transformation functions 9=9220
  beams, "diffraction in time" 8=7231
  behaviour in conformal-covariant weak field theory 5=1521
  β-transitions, 0-0, with change of parity 9=10069
  Bethe—Salpeter 2-body eqn., modification 5=6740
  Bhabha's eqn. field for particles 8=7692
  bilocal theory of particles 6=6348
    of isotopic spin 6=3484
  Bose particles 8=6650-1
  bosons, Dirac and Gürsey eqns. 9=2069
    emission, Coulomb effects 9=8477
    heavy unstable, degenerate charged states 5=9941
    pair production, partial wave anal. 9=7810
    self-coupled, statistical mechanics 9=2110
  bound-state props. and scattering of particles 8=5658
  cascade particles, decay 9=9964
    distribution correlations 8=4752
    kinetic equations 8=1527
    in multi-layer medium 8=4751
  cascade theory, stochastic processes 9=2559
  charge conjugation and angular momentum 8=509
  charge, determination in nuclear emulsions 8=6111
  charge independence, generalization 7=6875; 9=10578
  charge symmetry and extended Lorentz group 9=11828
  charged particles, anomalous decay in cloud chamber
    and antiparticles 7=2986 [8=2455
    atom displacements in solids on bomb. 9=825
    behaviour in homog. e.m. field 8=1818
    in e.m. and gravitational field, relativistic theory 6=4817
    energy losses in anisotropic medium, calc. 5=8827

Fundamental particles - contd
  charged particles, identification with crystal telescope
    localization in h.f. e.m. field 8=8146 [5=8180
    momentum meas. 7=4955
    motion in force-free mag. field 8=5592
    moving near conductors, radiation 8=1814
    passage through laminar dielectric 8=5055
    systems with short-range forces 8=6649
    transition and Cherenkov radiation 8=5969
    types with spin one 6=8577
  charges and parities 7=9531
  with charges $< e$ 9=3714
  chirality invariance and Fermi interaction 8=3301
  classical point particle in spinor form, relativistic kinematics 7=8393
  classification, based on 4-dimensional isotopic spin space 9=9219
    of new particles 9=3711
    rules 6=7705
    suggested 9=44
    systematic, baryons and mesons 9=9963
    unified scheme 8=5169
  clothed particle operators in quantum field theory 8=4723
  collective motion of interacting particles 8=4755
  collisions, elastic, theory 7=61
  composite particles 7=7597
    self-stress 9=1065
  compound (Λ + N) particles 8=6636
  config. space methods in rel. quant. field theory 5=5860
  conformal geometry 5=1503
  connection between spin and statistics 8=4737
  conservation laws in Gürsey's formalism 9=11825
  conservation of parity, rel. to new particles 5=5875
  in cosmic rays, review 9=11172
  covariant particle equations, synthesis 6=4195
  creation operators 8=1508
  de Broglie's fusion theory 5=3435
  decay, asymmetry, and dipole moment 8=5642
    of quasi-stable states 8=5662
    renormalizability of vector meson interactions 9=6518
    into spin 0 and polarized spin/particles, selection rules 5=4953
    spin selection rule, parity conservation 7=8864
    into 2 particles, energy distrib. 8=1811
  diagonalization of Hamiltonian 9=7793
  dimensional symmetry 8=2767
  dimensionality of charge space 7=2982
  Dirac eqn., relativistic Cayley—Klein parameters 7=90
    relativistic hydrodynamics equivalent 6=910
  Dirac field, symmetries 8=1507
  Dirac matrices in Riemannian space 8=4733
  Dirac monopoles 9=8441
  Dirac particles, Coulomb wave-functions 8=7716
    electron, rel. to classical spinning particle 8=4360
    Foldy—Wouthuysen transformations 9=1066
    mass defect 9=9224
    mass spectrum 5=3433
    with oriented spin 9=1060
    with oriented spins and parity non-conserv. 9=7795
    polarization on scattering 8=1529
    self-energy 6=1852
    spin, simplified theory 8=3705
    spin ½, relativistic representation 9=6524
  Dirac and Klein—Gordon particles, scattering relationship 7=1909
  Dirac spinors, invariants formed from 9=7792
    space, time and world reversals 8=2776
  Dirac's theory, classical limit 6=8579
  Dirac—Fierz—Pauli particles, of half-integral spin 6=4194
  disintegration into zero-rest-mass particles 5=1517
  electric dipole moments 9=7240
  in e.m. field, precession of polarization 9=11807
  e.m. form factors, structure singularities 9=13009
  emission, angular correlation with polarization of emitter 8=1155
  empirical 'charge dependence' rel. to rest-masses 5=4357
  ether excitation theory, phase invariance 5=8467
  extended Lorentz group, charge symmetry and irreducible projective representations 9=7794
  extended particles, formulations in theory 5=7694
    relativistic invariant theory 7=94; 8=4739
  families, bilocal theory 5=9423

Fundamental particles - contd
- fast particle absorption by semi-transp. nuclei 6=6886
- Fermi particles, 2-component representation 9=7783
  - particle—hole relation 9=13010
- fermion gas, Jastrow's wave-functions 9=62
- fermions, classification, 4-dimensional isotopic group 9=3125
  - degenerate, level density 9=1077
  - doubling, μ-meson and electron states 9=3131
  - energy calc. 9=2080
  - energy levels 7=3967, 8390
  - fundamental eqn. 7=8389

- Vickers indentation, recovery mechanism 8=7570
- viscosity, atomistic theory 5=5664
  - meas. methods 5=8533
  - and structure 5=775
- water, diffusion in outgassing 6=127
  - multilayer adsorption on surface 5=2286
  - vapour, adsorption isotherm and surface elec. conductivity 9=5233
- vapour adsorption in vacuum 9=10352-3
- windows, thin, fabrication and props. 5=8036
- X-rays, reflection and absorption 7=4423
  - scattering, counter for diffract. diagrams 8=4528
  - scattering, low-angle 8=8470
  - soft, total reflection 9=12344
- Young's modulus, effect of wetting 5=1580
- Zn borosilicate, physical props. 9=6299

Glass-metal seals

- Al foil stretched over large areas 5=1423
- Cu—glass seals for high vacuum 7=3059
- demountable vacuum seal 5=7754
- elec. contact for high vacuum systems 6=6428
- optical stress meas. using small oven 5=6972
- shielded elec. connection into vacuum 5=5934
- strain meas. with polarized light 9=13984

Gold

- annealing of quenched-in defects 9=804
- Au$^-$ formation by charge transfer 7=2361
- Au^{198} on γ-ray source for penetration expts. 9=4887
- bonding to fused silica, effect of O_2 9=7561
- cathode vaporization, non-formation of oxide 9=5764
- colloidal, anomalous optical props. 9=5581-2
  - gold sol, particle size, by X-ray scatt. 9=13878
  - nucleation and growth in photosensitive glass 9=918
- compressibility, at high press. 8=7573
- condensation coeff., for atomic beams 9=720
  - substrate temp. effect 7=791
- crystal growth, from AuCl solns., unusual habit 9=13899
  - floating-zone technique 9=10487
  - grain growth 8=6498
- Debye temp. 9=772
- deuteron irradiation at 10°K 5=2724
- diffusion in, Ag 6=1640; 7=1669
  - in Ag, along dislocations 9=1892
  - in Ag—Au void formation 7=8212
  - in NaCl whiskers, dislocation decoration 9=8809
  - in Pb 6=2463, 6951
  - in liq. Pb 6=1157
  - in Si, and solubility 7=3751
  - self-diffusion 7=6631, 7449
- elastic consts. 9=1901-2
- elec. resistance below 1°K 7=7856
  - cold working effects 8=6952
  - pressure effect at low temp. 6=382; 8=7989
- electrodes on NaCl, rectifying effects 8=4018
- electron and positron transmissions 6=409
  - energy loss and range, tables 6=8236
  - range, low energy meas. 9=12378
  - through foil 9=1532
  - wave interference 9=12827 [7=9250
- electron emission due to metastable He atom impact
- electron reflection and secondary emission 9=8226
- electron scattering, back, 10-100 keV 9=1531
  - distrib. of electrons 5=8016; 7=1373
  - double 8=6124
  - by foils, Coulomb cross-section meas. 9=4894-5
  - Mott, asymmetry 9=4713
  - multiple 9=2410
- energy of formation and displacement of vacancies 9=12772
- equation of state test 8=3452
- evap. f.c.c. crystallites, electron diffract. study 9=13961

Gold - contd
- evap. layer, interference fringes and absorption spectra
- evap. with intermittent arc 6=1159 [9=4456
- films, effect of Bi oxide substrate on cond. 6=5853
  - elec. conductivity 7=5308, 7089-90, 7923; 9=9594
  - elec. cond. in elec. fields 9=13328
  - elec. resistance, variation with gas adsorption 9=3436
  - electron energy loss 5=8825; 6=6707
  - electron scattering 8=8209
  - evap., anomalous lattice spacing 5=10096; 6=4040
  - evap., electron diffraction exam. 6=4691
  - evap., epitaxy rel. to support charac. 6=5448
  - evap., on alkali halide, orientation 6=3313
  - evap., structure 5=7420

Hearing - contd

- noise, low-level, residual effects 9=9123
  - octave-band, differential thresholds 9=7708
  - repeated white noise bursts, cumulative effects 5=1646
  - thermal, threshold 7=4941
  - off-white, loudness, halving and doubling 5=4479
- perception, acoustic cues 7=4938
  - of complex sounds, semantic approach 9=965
  - of complex sounds, time factors 7=3870
  - of consonants in artificial speech 8=8660
  - of cues in synthetic speech 9=2185
  - voicing, duration effect 5=7794
- perstimulating fatigue, due to noise 5=2540-1
  - meas. methods 6=858
  - spread to neighbouring freq. 5=8432
- phonemic differentiation, rhyme test 9=972
- physiology and psychology of, future research 8=6571
- pitch, absolute 6=1006
  - absolute, det., time factors 5=1417
  - of amplitude modulated signals 5=8431
  - creation through binaural interaction 9=964
  - of inharmonic signals 7=2902
  - perception, periodic auditory stimuli 5=3361
  - rating of vowels 9=973 [8=1402
  - sensation due to time difference between pulse trains
  - shifts, accompanying auditory threshold shifts 5=672
  - unitary, perception despite displacusis 6=7914-15
- pitch discrimination, channels of reception 5=3360
  - mels, and Kock's theory 5=3362
  - thresholds, time effects 7=8962
  - two-tone, pitch 7=8339
- psychological dimensions of sounds, physical correlates
- psychophysical measures 9=4179 [9=7706
- porposes, auditory perception of submerged objects 9=4159
- post-stimulatory effects at threshold 9=4189
- probe tube microphony and audiometric zero 6=7239
- ROC curves, two types 9=10464
- reaction time, rel. to frequency 7=5777
- reception of overlapping speech patterns 5=6852
- recognition theory 7=980
- relations between audition and phonation 6=8636
- responses of the auditory cortex 9=6423
- semantic reactions to systematically varied sounds 9=10467
- sensation of beats and ratio of tones 7=8966
- sidedness judgment, interaural time differences 6=7916
- signal detectability, graphical presentation 9=10463
  - indices of 9=7709
  - in noise 6=6487, 7237; 8=8562; 9=4173, 4183-4
  - operating characteristics 9=10465
  - rel. to its intensity and duration 7=8957
- similarities with skin sensations 8=841
- skin perception of travelling waves 5=10151
- sound level discrimination, rel. to testing conditions 5=7581
- sound level identification, intertrial stimulus var. 6=1016
  - matching 6=4281
- sound spectrum anal. into freq. groups 6=3584
- speech, filtered, confidence rating and message reception
  - intelligibility 9=6659 [9=968
- standard, laboratory, proposed 8=2079
- stereophonic, localization, effect of arrival time 5=2350
  - with one earphone 5=5293
  - reproduction by reflection, reaction to 9=11968
  - sound, effects of interchannel intensity and time differences 9=10466
  - two-channel transmission 6=4962
- susceptibility, rel. to sex 9=11689
- sustained notes and pulses, constant loudness curves 7=4936
- switching speech between two ears 5=9320
- symposium, speech and heating 6=6469-73, 6475-77, 6=6479-81, 6483-4, 7236
- synthesized vowels, recognition 7=2903
- Tartini pitch, observation 5=669; 6=4131
  - origin 5=670
- telephone receiver, subjective free-field calibration 5=2533
- temporal order, auditory perception 9=10474
- theories, current 6=7913
- thresholds 7=8342
  - age and sex differences 9=7707
  - in air and water 9=4185
  - for bands of noise and pure tones 7=6798
  - Békésy and pure-tone method 8=4607
  - and detection of signals in noise 7=8334

Hearing - contd
- threshold, and duration for tone pulses 9=10472
  - effect of ear's transmission characteristic 9=967
  - effect of practice and motivation 8=2722
  - and equal loudness relations 8=1401
  - frequency distrib. 5=7576
  - human, conditioned reaction meas. 6=8539
  - interaural time difference 7=978
  - masked, rel. to masked stimulus duration 6=6485
  - noise-masked 7=8956
  - of pulsed signals rel. to duty cycle 5=9322
  - recovery after pure tones 6=1776
  - "reference zero" in U.S.A. 7=3871
  - shift, as noise susceptibility index 6=6486
  - shift, hearing level and loss 8=5568
  - underwater 7=8960
- temporary threshold shift 9=4174-6, 10473
  - due to noise 8=2721
  - from octave-band noise 9=7711
  - recovery 9=7712
  - rel. to noise intensity and duration 9=1979
- tonal memory research 8=4601
- tonal monaural displacusis 5=4259
- 2 u.s. freq. demodulation effect 5=5289

Hearing aids
- analysis of sound by sense of touch 9=7907
- bone-conduction receiver tests 5=812
- earphones, response in ears and couplers 5=148
- effect of earphone cushion on auditory threshold 9=13983
- effect on speech intelligibility in noise 8=3834
- noise attenuation by earphone sockets 5=2535
- semiplastic earphone socket 5=2536
- stereophonic heaving with one earphone 5=5293
- stethoscopes, review 8=3619

Heat (See also Radiation, heat; Thermodynamics).
- basic concepts of physical quantities 5=2387 [8=8854
- conversion into electric energy using thermionic emission
- Laplace's eqn., n-dimensional field solution 8=5576
- thermal motion of inclusions in solids 7=4286

Heat capacity (See also Specific heat; Thermodynamic properties).
- chain polymer crystal 7=5722
- electron gas, high-density 9=1086
- gases, constitutive nature 6=5055
  - 23, diatomic and triatomic, empirical formulae 9=271
  - dipolar, rel. to intermolec. energy 6=3055
  - temp. dependence 6=5056, 8747
- at low temp., rel. to vibr. energy 6=6561
- metals, rel. to Fermi surface 8=6402
- microscopic particles, meas. at low temp. 7=322
- semiconductors, meas. method 6=1206
- solids, isotropic, with velocity dispersion 9=8818
  - temp. dependence 8=3050
- A, solid 9=4000
- Ag, below 4.2°K 6=5825
- Al, 0.1-4.0°K 9=9569
- Al_2O_3, 30-500°C 8=3955
- α-brasses below 4.2°K 8=161
- $(C_5H_8O_2)n$, compressed by shock wave 9=5444
- Ca, 1.8 - 4.2°K 8=599
- $CdBr_2$, $CdCl_2$ and CdI_2, at low temp. 8=4936
- $CrCl_3$ and CrF_3 8=3958
- Cu, below 4.2°K 6=6576
- Cu alloys below 4.2°K 9=5635
- Cu acetonylacetone, at 1-20°K 9=2287
- Cu_3Au, below 4°K 8=3051
- Cu—Ge alloys, below 4.2°K 8=4935
- cyclopentane vapour, rel. to pseudorotation of molecule
- diamond 8=1029 [9=2870
- dysprosium, 15-300°K 6=7358
- erbium, 15-320°K 6=1177
- Fe tellurides, 5-350°K 9=6854
- fluorides, Zn (11-300°K) and Mn, Fe, Co, Ni, rel. to antiferromag. ordering 6=301
- He mixtures, liquid 5=2679
- He^3, Landau's Fermi-liquid theory 9=13233
  - liquid, at constant volume 9=2279
  - liquid, 0.23-2°K 5=6083
- Ho, 15-300°K 7=8572
- In, molten 8=1550
- KAl and NH_4Al alums, 1-4° and 14-20°K 6 =3681
- KCr, $FeNH_4$ and $CrCh_3NH_3$ alums, 1-4°K 6=4366

Heat capacity - contd
- KBr, KCl and KI, rel. to crystal parameters 8=162-3
- KI, 2-7°K 9=2286
- La, 1.6 - 6.5°K 8=7874
- LiF, 2-7°K 9=2286
- Mg_3Cd, 4-15°K 7=7070
- MgO, small particles, 1.5-4°K 9=6855
- Na amide, 15-300°K 9=10934
- NaCl and NaI, rel. to crystal parameters 8=162-3
- Na_x-WO_3 (bronzes), 1.8-4.2°K 8=1662
- Nb, normal and superconducting 8=8787
- $NiBr_2.6H_2O$, temp. dependence 9=11225
- Ni—Cr—Fe alloys 9=2290
- NiF_2 5=7921
- Ni tellurides 8=8740
- Pb, molten 8=1550
- Pd, below 4.2°K 7=8574
- rare-earth ethylsulphates, 1.4-20°K 9=8053
- rutile, pure and reduced, 1-20°K 9=4533
- sand, temp. dependence 6=8144
- Si, high temp. 7=7071
- Su, molten 8=1550
- spinels, rel. to lattice reciprocity 9=8794
- Ta, normal and superconductivity 5=7979; 8=8788
- Tb, 15-350°K 8=159
- Ti, 4-15°K 6=5823
- Trichloroethane vapour 7=7837
- trimethylbenzene 5=7930-1; 8=160
- β-UH_3, 5-350°K 9=12189
- V, normal and superconducting 5=7979
- W, 4-15°K 7=2145
- Zn, superconducting 9=2352
- Zn and ZnLi ferrites 9=9568

Heat conduction (See also Conductivity, thermal).
- acoustic-wave conduit walls, attenuation effect 6=158
- in aeolotropic plate, semi-infinite, thermal stresses 9=3171
- anisotropic, symmetry relations 5=4585
- axial-flow error in thermal-conductivity probe 6=3671
- bar problem in a periodic system 6=7336-7
- from body, in compressible fluid stream 9=12171
- causing acoustic wave reflection at interface 5=1631
- conduction eqn. solution 7=1, 3186, 9130; 8=3478
  - by electronic computor 5=6678
  - linear eqn. 8=3632
  - relaxation method 5=4586
- crystal dynamics, conference 7=6370
- crystals, anisotropic, thermodynamics, appl. 5=910
  - effect of wave interactions, theory 8=3445
  - elec. insulating 6=282
  - lattice conduction, effect on paramag. relaxation 8=7520
  - phonon—electron scattering, 2nd-order effects 8=3918
  - phonon mean-free-path 8=2639
  - statistical mechanics 6=7168
  - Ziman's formula 8=3017
  - dense fluid of rough spheres 8=2848
- dielectrics, in electric fields 7=7809; 8=3917
  - at low temp. 9=4510
- through disks, flow 5=1751
- disordered structures 9=13207
- effect of surface and volume of body 6=8723-4
- effect on sound pulse transmission 5=6819
- electrolytic tank study 6=8725
- electronic, formal relaxation times 6=8176
- ferromagnetics, spin—wave scatt. contrib. 6=281
- flow eqn. for heat generation 7=7073
- fluctuating flow, theory 5=3665-6
- free electrons effect on lattice conduction 6=2029
- front-heated slab, effect of holes 7=4269
- functional equation 5=7888
- gas mixtures, approximate formulae 9=119
  - multicomponent 8=5715; 9=1365
  - ternary 7=8549
- gases, in chemical equilibrium 7=7810
  - inert, solidified, laws of corresponding states 9=10892
- in liq. He II 5=6089
  - quantized growth of turbulence 9=3393
- He^3, liquid 6=8739
- in infinite cylinder with chemical generation of heat 5=885
- infinite stratiform bodies 9=9547 [3373
- instantaneous propagation paradox, form of ht. eqn. 9=1356,
- insulator, lattice conductivity 5=6981 [6=6556
- intermolec. force const. from Chapman—Enskog theory

Heat conduction - contd
- liquids, binary solns., statistical mechanics 9=1363
  - multicomponent, transport processes 7=9563
- in medium with moving boundary, temp. eqn. soln. 9=3374
- in medium with temp. dependent conductivity 7=2106
- metals, effect of mag. field 8=2275
  - effects of impurities and imperfections 7=4268
  - electron transport theory 7=567
  - films in mag. fields 8=7043
  - at low temp. 5=3668
  - monovalent, effect of Coulomb interaction 9=12232
  - monovalent, theory 6=6554
  - transport theory 8=5469
- in moving viscous fluid 7=1101
- nonlinear problems, pilot ACE soln. 6=3669, 7338
- 1-dim. problem, Fourier integral appl. 6=2814
  - with one moving boundary, solution 9=5606
  - soln. and appl. to diffusion etc. 5=2656
- outside a perfectly conducting cylinder 6=6553
- in parallel-faced infinite slab 9=246
- periodic flow, matrix calc. 7=7046
  - two-dimensional, polar coord. soln. 9=1357
  - waves, in air 7=5262
- reactor fuel elements, unsheathed, temp. distrib. 9=11494
- reciprocal relations 5=3466
- Righi—Leduc effect, bipolar 9=10893
- rod, consist. of 2 similar parts 6=283
- in round wire coils 5=6074
- in semiconductors 5=3727-8
  - conference 9=4569
  - electrons and excitons 6=8775
  - electrons and holes 6=2083, 6627
  - isotropic, in mag. field 6=8184
  - phonons and electrons 6=6628
  - in strong elec. field, theory of eqn. 5=887-8
  - thermodynamics 9=5674
- in solidifying fluid 5=5361
- in solids, anisotropic, theory 5=886
  - in contact with stirred fluids 7=304
  - inhomogeneous eqn. conduction 7=305
  - with metallic fin 5=1287
  - with temp.-dependent thermal props. 5=2654
- in superconductors 9=13208
  - intermediate state 5=4684
- temp. waves in thermal insulators 9=243
- thermal shock propagation 7=7044, 9127-8
- thermal transducers, theory and application 9=245
- transfer equation, 1-dimensional soln, Fourier paradox [8=6900
- transient, in anisotropic strata 5=240
  - in multiphase media 5=9599
  - relaxation method soln. 5=4586
  - between two plates 6=8727
- transition elements, at low temp. 9=3437
- transport eqn., for hot gas to cold wall 9=9546
  - statistical, quant.-mech. perturbations 5=7706
- transport integrals, tables 8=5574
- 2-dimensional, in thin plates 7=4265
- in wire or plate with surface radn., calc. 6=5042

Heat losses (See Heat transfer).

Heat measurement (See Calorimeters; Calorimetry).

Heat of adsorption
- boundary lubricant in sliding metals 9=889
- gases on metal surfaces 5=6096
- rel. to electrolytic H evolution 7=5701
- reversibility in adsorption 5=5059
- A on graphite 8=6489
- benzene on graphite powders, interparticle condensation effects 9=11615
- H, chemisorpt. in metals 5=3701
  - on Ni 7=7480
- He on prepared uniform surface 6=1709
- Hg on Fe 8=8375
- inert gases on charcoal, appl. of charge-transfer theory [9=5235
- N on W 6=4069, 7796

Heat of combustion
- calorimeter, miniature bomb 5=4608
  - precision 5=259
- alcohols, phenols, ketones 5=2264
- benzoic acid, bomb calorimeter calibration 5=4607
- organic peroxides 7=9666
- succinic acid, precision det. 5=5380

Heat of crystallization
- Bi and Ga films 7=6638
- ice, amorphous 7=2148

Heat of dissociation
- Al_4C_3 9=10917
- alkali fluoride polymers 9=6212
- CH^+ 5=1011
- CO, from Kr—Co mixture in shock tube 8=8728
- F_2 9=5643
- LiF 5=4753
- methanol vapour 8=8629
- N_2 5=8715
  - enthalpy and dissociation energy 9=3412
  - lower limit 6=1964
- phenylazyl dimers 6=2521
- So_2 and So_2F_2, by electron impact 9=5845
- trifluoroacetic acid 7=8525
- $ZnAs_2$ 9=10916

Heat of formation
- acetate, priopionate and butyrate radicals 7=9666
- acetyl radical 6=2490
- alcohols, phenols, ketones 5=2264
- alkali fluoride polymeric species 9=6214-15
- alloys, calc. from atomic interaction 9=13817
  - calorimeter 8=2285
- BaC_2 9=1394
- CF_3 5=2930
- CH_3F, use of mass spectrometric data 6=4052
- diimide, enthalpy and free energy 9=4084
- F_2 9=5643
- H_3O^+ 6=7360
- I complexes in organic solvents 7=6675
- I_2 complexes in inert solvents 6=4539
- In—Hg alloy 7=9424
- Li_2S 9=8797
- $(MoO_3)_n$ polymers 7=5271
- NF_3 6=5985
- NH^{-2}, calc. from alk. earth inside lattice energies 5=9620
- NH(g) 5=2688
- NH_3, 550°C 9=12188
- N_2H_2 8=7588
- nitryl chloride, from elements at 25°C 9=9572
- phenyl and ethyl phenyl radicals 5=1012
- pyridine—pyrrole system 5=2476
- SO_2-benzene and SO_2—ethanol complexes 7=6997
- $TiCl_4$ 5=8716
- $TiCl_4$, $TiCl_3$, $TiCl_2$ 6=8746, 8748

Heat of fusion
- calorimeter for meas. of, up to 500°C 8=3932
- and yield strength, single crystals 5=5360
- alcohol, normal, with C no. > 32 6=300
- $CsNO_3$ 8=3957
- KCNS 6=5054
- LiF 5=1784
- NF_3, at triple-point temp. 5=4610
- $NaNO_3$ 8=3956
- Pb 5=1783
- polyethylene 8=390
- Si 7=7071
- trimethylbenzene 5=7931; 8=160

Heat of reaction
- calorimeter, differential, study of stability 6=299
- fast reactions in soln., appl. to rate meas. 5=5025
- galvanic cell, mag. field effect 5=2268
- hydration of ions 6=5504
- thermal max. method appl. to reaction rate meas., soln. 5=5027
- alkali hydroxide vapours, dimerization 9=12758
- $2B + 2B_2O_3 = 3B_2O_2$, at 1300-1400°K 6=8732
- Ba oxide vapours 6=2206
- n-butyl sulphide—boron trifluoride complex, association [9=7400
- coal, powdered, heat generation 7=7073
- $Fe-KMnO_4$ 5=1310
- $HF + ClF_3$ from spectroscopic data 5=848
- $NH_3 + BF_3$, gas-phase 9=12850
- $NiF_2 + H_2$ 5=7921
- SO_2 —polar solvent complexes, decomposition 7=6998
- $TiCl_2$ sublimation 6=8731
- $TiO_2 + 4HCl$ 5=8716

Heat of solution
- calorimeter, adiabatic 5=6093

Heat of solution - contd
- calorimeter, calibration 7=1238
  - micro 5=7920
  - rocking-bomb 8=3954
- mixing, variation with temp. 5=5382
- alloys, Sommerfeld model 9=852
- He^3 and He^4 mixing, He^4 2-fluid theory 5=1773
- He and Ne in liquid A 9=108
- inert gases, in water, microcalorimeter for 9=9565
- iso-octane—perfluoroheptane 7=2140
- MgO, variations, X-ray diffract. study 7=1758
- NaCl 5=5378
- organic liquids, mixing, calorimetry 5=906
- liq. Pb—Sn alloys, mixing 5=3695
- SO_2 and other gases 7=6999
- Sb—Bi, 700°C 9=13238

Heat of sublimation
- seven substances, 0°K 8=4406
- A, Kr, Ne, Xe at 0°K 9=2895
- Ag 6=6560
- alkali fluorides 9=6212
- C 5=1010, 3699, 8835
  - from Kr—CO mixture in shock tube 8=8728
  - mass spectrometer det. 5=3700
- Fe, in Fe—Cr alloys 7=4291
- Ge 5=251, 3685; 9=11890
- graphite 5=1011
  - at about 2400°K 7=3197
- Hg diphenyl, latent heat 8=3938
- K 9=8087
- LiF 5=4763
- metals, variation with atomic number 8=8810
- MgO 5=909
- Mo_3O_9, Mo_4O_{12}, MoO_5O_{15} 7=5271
- polyethylene 8=390
- rare-earth metals, by mass spectrometer 9=5636
- Si 9=6216, 11890
  - mass spectrometer studies 5=262
- SiO_2 5=3679
- Sn 9=11890
- ZrO and ZrO_2 7=7836

Heat of transformation
- internal, of evaporating fluid, law of corresponding states 9=12179
- Al—Ag alloys, precipitation 7=6635
- alcohol, normal, solid, C no. > 32 6=300
- camphor crystals 8=1018
- Ce, under pressure 9=1375
- $CsNO_3$ 8=3957
- Cu, irradiated, stored energy release 9=5173
- Cu_3Au, at high temp. 8=812
- He, evaporation 8=3039
- $MgCd_3$ 6=3693
- $NaNO_3$, λ-transformation 8=3956
- quartz, $\alpha-\beta$, effect of neutron irrad. 7=6641
- Rb nitrate 9=4531
- Sn, white-to-gray 9=4104
- trimethylbenzene 5=7930-1
- U, $\alpha\beta$ and $\beta\gamma$ 7=334
- WO_3 7=7817

Heat of vaporization
- corresponding states theorem studies 6=4356-7
- drops in atmos. suspension 5=5792
- formula 7=9144
- gases, 23 diatomic and triatomic 9=271
- liquids, regularities rel. to chem. structure 8=8739
- meas. method 7=157
- rel. to temp., parachor eqn., appl. to benzene 6=1887
- Al 7=2121
- aliphatic alcohols, H-bond contribution 7=3216
- As 5=5919
- B_2O_2, at 1300-1400°K 6=8732
- Bi 5=5919
- Ge 5=261
- He^4, several temps., calc. 5=3691
- Hg 5=5919
- La 6=3879
- NF_3, at normal b.pt. 5=4610
- Nd 7=2121
- O, at 80-106°K 7=1239
- phenols and cresols 9=259
- Pr 7=2121

Heat of vaporization - contd
- Sb 5=5919
- trichloroethane and propanol 7=7837
- water, as calibration standard for calorimetry 7=1238
  - tritiated 8=3935

Heat of wetting
- calorimeter for, use with organic liquids 9=269
- wood, rel. to specific heat 8=598

Heat radiation (See Radiation, heat).

Heat transfer (See also Convection; Heat conduction; Radiation, heat).
- in absorbing media, radiative exchange 9=13214
- in air columns, saturated 7=3184
- between Al and other metal contacts 7=8553
- bibliographical review 9=5603
- from body immersed in fluid 7=6087
- in boiler, inclined tube, effect of water vel. 5=8686
- boiling in pipes 5=6982, 9603
- boiling of liq. H_2 or N_2 in narrow channels 7=5266
- across boundary layer 5=3673
  - laminar, with mass transfer, perturbation calc. [9=11897-8
  - thermal, eqns. 9=4508
- in burner ports, stability of gas combustion 9=10699

- temperature cycle controller 7=3215
- Ag, annealing, effect on work function 6=5139
  - evap. films, recovery process 7=790
  - irradiated, near 10°K 5=2724
  - self-diffusion, annealing effect 5=3160
- AgBr, defects lifetime in recovery 5=10005
- Ag halide single crystals, effect on elec. conductivity 8=1046
- AgN$_3$, decomposition rel. to absorption spectrum 7=5181
- Al, annealing at 350°C, boundary mobility 8=8449
  - effect on internal friction 6=747
  - internal friction maxima 9=874
  - quench-annealed, spec. ht. study 6=1179
  - quenching vacancies 7=6716
  - single crystals, quench hardening 5=8326
  - vacancies, isochronal annealing 9=7515
  - vacancies, rate of annealing 9=13787
- Al—Fe alloys, low residual induction 8=8896
- Al—U, transformation kinetics of UAl$_3$ → UAl$_4$ 9=10299
- Al—Zn, isothermal ageing, elec. resistance 9=4561
  - rel. to ageing 6=4705
- Alcomax, rel. to mag. props. 7=8723-4
- alkali sulphide phosphors, effect on thermoluminescence 8=2990
- Alnico VII, special casting methods 9=975
- Au, evap. films, recovery process 7=790
  - irradiated, near 10°K 5=2724
  - pure, quenching-in of lattice vacancies 5=3195
  - quenched-in defects 8=2666, 4428; 9=804
  - water quenched, resistivity increase 6=5894
- Au—Cd, quenching, change of props. 8=2296
  - quenching, effect on resistivity 6=6620
- Au—Cu, effect on resistivity and magnetoresistivity 5=9186
  - quenching, lattice defects, elec. cond. 9=10960
- Au$_3$Cu, annealing, rel. to elec. cond. 8=2298
- Au—Pt alloy, effect on thermal cond. 8=3921
- BaO.6Fe$_2$O$_3$, effect of sintering on props. 8=7180
- BaTiO$_3$ crystals, coloration by annealing 8=1328
- Be, neutron-irradiated, annealing 9=10270-1
- Bi films, effect on bolometer charac. 8=8691
  - elec. resist. changes 5=9646
  - tempering, photoemission 9=9692
- α-brass, annealing, short-range order 9=856
  - resistivity effects 6=6622
- C films, annealing, effect on elec. props. 8=3081
  - annealing, elec. cond., thickness and temp. dep. 9=9614
- carbons, effect on elec. props. and crystal struct. 6=3756
- CaF$_2$, effect on dielec. losses, 90-200°C 8=8751
  - hydrolysis, decoration of disloc. lines 9=917
- CdS, crystals, activation of photoconductivity 7=8634
  - photocond., spectral response 9=12291
- Co alloys, in mag. field, new mag. prop. anomaly 5=2014
- Co ferrite, in mag. field 6=6774
  - neutron diffract. study 6=5225
- Co—Ni alloy, mag. annealing 9=13426
- Cr, effect on elec. and thermal conductivity 8=1042
- Cu evap. films, recovery process 7=790
  - fatigued, annealing of slip bands 8=3513
  - stresses, films, stress annealing 6=3306; 8=816
  - irradiated, annealing 8=6427
  - irradiated, hardening by annealing 8=6417
  - irradiated, near 10°K 5=2724
  - powders, effect on X-ray extinction 9=13832
  - quench-annealed, spec. ht. study 6=1179
  - quenched-in lattice vacancies 9=6272
  - quenching, effect on internal friction 8=3503
- Cu alloys, quench-annealed, spec. ht. study 6=1179
- Cu—Al, neutron irradiated, elec. resistivity 9=8085
- Cu—Al—Ni, rel. to super-elasticity 8=7554
- Cu—Au alloys, quenched and annealed, elec. cond. 8=3086
- CuAu single crystals, thermal expansion, effect of stress-ordering 9=10913
- CuAu$_3$, quenching, superlattice formation, elec. cond. 9=13273
- Cu$_3$Au, ordering processes 5=4828
- Cu—Co alloy, magnetic annealing 8=8890
- Cu—Ni—Fe, mag. props. 9=9766
- Cu$_2$O, quenching, rel. to elec. and optical props. 8=2245

Heat treatment - contd
- diamonds, irradiated, effect on absorption spectra 6=8666
- Fe, films, effect on surface area 9=2961
- Fe$_3$Al, mag. annealing 9=13427
- Fe—Co, in mag. field 8=1126
- Fe—Co—Ni, mag. annealing 9=8310-11
- Fe—Ni, annealed, mag. anisotropy 6=474; 8=8878
  - effects of on mag. props. 8=8893
  - films, annealing, rel. to mag. props. 8=8882
  - hardening 6=5460

  - role of impurities 9=13303
- InSb films, in A atmosphere 8=3119
- KBr and KI, annealing, effect on optical props. 8=577
- KCl, annealing, density charges 9=877
  - effect of thermal pretreatment on thermoluminescence
  - quenching, rel. to thermoluminescence 8=5799 [9=5578
- LiF, neutron irradiated, annealing 5=9235
- magnetite—Co, stabilized Bloch walls 9=9782
- MgFe ferrites, effect on props. 9=1885
  - quenching at 1100°C 9=425
- MgO, in oxygen, rel. to absorption spectrum 9=1876
- Mn ores, ferruginous, effect on coercivity 6=4494
- MnMg ferrite, effect on mag. props. 8=3238
- Mo permalloy tape, annealing, crystal orientation 9=916
- NaCl, irradiated, annealing 6=4734; 7=8208
- Nb, effects of vacuum annealing 8=8787-8
- Ni annealed, X-ray line shape changes 7=801
  - deformed annealing, density changes 6=8436
  - films, tempering, photo-emission 9=9692
  - powders, annealing 7=4815
  - powders, effect on X-ray extinction 9=13832
  - sputtered films, structural changes 8=7174
- Ni alloys, in mag. field, new mag. prop. anomaly 5=2014
  - magnetic, in mag. field 7=5461
- Ni$_2$Cr, annealing and quenching, atomic structure 9=10382
- NiCu ferrites, annealing, effect on sat. induction 8=3236
- Ni—Fe tapes, domain-wall motion 6=8866
- Ni$_3$Fe superlattice formation kinetics 5=3259 [9=880
- noble metals, deuteron-irradiated, annealing below 60°K
- Pb, annealing in ethylene glycol, effect on etch pits 9=13893
  - films, annealing, structure and elec. props. 9=11597
  - recovery after rolling in liquid air 8=3524
- polyvinyl alcohol, irradiated, effects 9=10275
- Pt, quenched-in lattice vacancies 9=7512
  - quenching, rel. to resistance and lattice vacancies 7=2821
  - quenching, vacancy migration, activation energies 9=8086
  - wires, annealing, effect of stretching 7=4383
- quartz, fused, effect on elec. props. 8=3088
- Rochelle salt, annealing, effect on ferroelec. props. 9=13260
- Se, films on KCl, elec. resistance 9=4592
- Si, crystals, resistance changes 5=2751
  - donor state formation 9=4033
  - effect on elec. props. 8=3121, 4993, 6999, 8771
  - electron-irradiated, annealing of defects 8=7524; 9=10277
  - irradiated, annealing of density changes 6=4033
  - p—n junctions, breakdown characteristics 9=1462
  - p and n-types, effect of Au 9=9630
  - quenching and annealing, carrier lifetime 9=11023
  - with Au surface conc., effect on props. 8=6994
- Si resins, effect on elec. and mag. props. 8=3251
- Si—Fe, mag. annealing 9=1585
- steels, annealing, effect of ultrasonics 7=8967
  - annealing, temp. distrib. 9=1359

Heat treatment - contd
- steel, effect on grain-size 9=8877
  - effect on torsion modulus 5=9179
  - Si, reduction of brittleness 9=10335
  - Si tempering, decay of permeability 8=8903
- Ta, effects of vacuum annealing 8=8787-8
- Tl metastable modification by quenching? 5=7491
- U, effect on elastic consts. 9=13843
  - metallic, abnormal β-radn. resulting 5=9052
- YFe garnet, mag. losses 9=13443
- Zn ferrite, effect on antiferromagnetism 8=8900
- ZnO, with Bi$_2$O$_3$, dielec. const. and conductivity 9=10944
  - in H$_2$, effect on i.r. absorpt. and elec. cond. 8=6847

Heating
- boundary-layer, in acoustic wave propag., conduits 5=127
- curves, heating and cooling, apparatus for obtaining 7=331
  - heating, plotting by capacitor method 8=5849
- dielectric, of quartz oscillating in org. liq. 6=6599
  - unit for mechanical testing of sand 5=4130
- elec. conductors, thin, cylindrical, by h.f. mag. field
- elec. heated rod, end losses 5=5351 [9=4830
- e.m., of conducting and semiconducting thin layers,
  - optimum thickness 5=2900
- fast-moving objects in upper atmosphere 8=2861
- furnaces, C arc image 8=9197
  - chill-casting vacuum induction 6=3419
  - Czochralski, for crystal-pulling 8=3569
  - electron bombardment 8=3625
  - for growing naphthalene and anthracene crystals 9=974
  - for growing naphthalene crystals 7=8259
  - h.f. induction, for radiocarbon det. 5=5072
  - high temp., vacuum 9=7862
  - vacuum, high temp., for tensile testing 6=6979
  - laboratory, linear heating, control system 7=4289
  - for microscopy 9=10888
  - r.f., for pulling Si ingots 9=1988
  - resistance heated high vac. 5=3494

- interstellar, viscosity and thermal conductivity 8=3660
- ion-atom collisions, resonance phenomena 9=11523
- ion recombination in, microwave meas. 8=8078
- ionic pumping in ionization gauge 5=7752
- ionization, by α-rays, influence of impurity gases 6=1329
  - by collisions 9=2456
  - by electrons, variational method 5=2089
  - energy to produce one ion pair 6=8842
  - and excitation, by protons 8=8843
  - in fast collisions with H and He+ 5=2090
  - loss, by relativistic charged particles in He 8=1107
  - neg. ion prod. by collisions 6=7496
  - specific, by electrons 5=3852; 8=2463
- ionized, elec. cond. and plasma oscillations 9=1559
- ions, charge exchange in gas collisions 9=367
  - charge—exchange in collisions with H$^-$ ions 8=5080,8844
  - cyclotron-produced, radiolysis of glycine soln. 6=5479
  - double electron capture and loss in gases 8=8840
  - He$^-$, metastable energy state 5=9021
  - He$^+$, electron stripping and capture 9=4752
  - He^{++} beam production 5=1949
  - radiolysis of formic acid soln. 6=5481
- iso-electronic sequence, perturbation calc. 9=13730
- liquefaction, Joule—Thomson process 8=5855
- liquefied, single-phase transfer 9=3192
- liquefier-cryostat 6=3688
- metallic character 5=3299
- in meteorites, determination 5=8449
  - isotopic conposition 7=4990
  - production 9=5315
  - rel. to their age 8=11
- mobility, of Li$^+$ in He 8=1738
  - of O$^-$ in He 8=6005
- molecular polarization 5=4856
- neg. glow, electron groups 5=6182
- PV isotherms, He^4 below 4.2°K 5=1588
  - 1.5 to 3.8°K 5=6813
- photoionization analysis 9=7126
- plasma, characteristics 8=3193

Helium - contd
- plasma, ionization and ohmic heating 9=1555
- as possible auroral particle component 6=845
- precipitation in neutron irradiated beryllia 9=10269
- as propellant in high-velocity gun 8=3744
- protons, 9/76 MeV, elastic scatt. 5=4738
- rectification 6=7777
- separation from Ne, I—T diagram 8=6913
- slow-electron excited, polarization of λ 5516 emission line 9=9489
- in solar chromosphere, excitation 6=8559
- solid, double refraction 8=5818
  - equations of state 9=4001
  - He^3, α and β forms 8=6516
  - He^3 nuclear alignment 9=5943
  - He^3, theory 9=11544
  - interatomic and lattice potentials 5=7907
  - and liquid, boson theory 7=6116
  - melting 7=5277
  - melting curves to 3500 kg/cm^2, He^3, He^4 5=7896
  - neutron diffraction data, structure 9=10403
  - nuclear susceptibility 5=1775
  - props. and structure, review 8=9105
  - structure from neutron diffraction patterns 8=8535
  - thermal conductivity 7=3185; 9=2269
  - vibrational properties 5=5369
- solid solutions, He^3—He^4 Pomeranchuk effect 9=2280
- solubility in liquid A 9=108
- sound propagation 6=6441
  - velocity in gas at liq. He temp. 8=3043
  - velocity, spec. ht. ratio, 4.22-3.60°K 5=1642
- sphere oscillation damping 6=6571
- sputtering of Ag 9=1542
- sorption and surface diffusion in Ce 5=8368
- stopping power for deuterons and protons 5=7139
- thermal coeff. on bare W 5=6584
- thermal conductivity, at low press. 8=8721
  - He—A—Xe mixture 6=8726
- u.v. emission in elec. corona 7=4131
- vapour-pressure scale of temperature 9=3398
- vapour, use in low-temp. scale 7=5284
- virial coeffs., and intermolec. potl. 5-5272
  - and molecule models 6=4251
  - second, at low temp. 6=4894
  - second, from expt.-six potl. 5=1601
- viscosity, below 80°K 8=6716
  - density dependence, at liq. H_2 temp. 9=13072
  - He^3, 14-20°K 5-7749
  - He^3 and He^4 at low temp. 7=3058
  - temp. dependence, kinetic theory 5=6811

High-pressure phenomena and effects
- allotropic transformations, X-ray crystall. study 5=576
- alloys, binary 7=8231
  - permanent deformation 6=7762
- design of apparatus 8=4613
- design of experiments 9=10340
- dielectric const. of gases, cell for meas. of effects 8=3971
- on diffusion of N atoms in Fe 8=3476
- dissimilar molecules, interaction 9=5123
- in earth's interior, effect on densities 5=4219
  - on conductivity of peridot 5=9283
- elec. and mech. effects, various substances 7=7468
- on elec. conductivity of metals 7=1314
  - at low temp. 6=382; 8=7989
- on elec. resist., compressibility, shearing strength, 13
  - alloy systems 5=1855
- eqn. of state at v. high pressures 9=1799
- explosive press for impulse loading studies 9=4082
- ferromagnetic materials 6=3030
- on friction between solids, intermetallic compd. formation [7=806
- on fusion curve 6=4358-61
- on gas adsorption, review 6=6240
- high molec. wt. substances, viscosity 9=6572
- high pressure, prod. 7=810, 6655; 8=2862
  - up to 1000 atmos. 7=9438
- high temp. prod. in gases 7=2126
- homogenization of solid solutions 6=8985
- liquids, nuclear mag. reson. study 5=2472
  - surface tension 8=67
  - viscosity 5=8531
- manostat for 500-10^4 16/in^2 9=1916
- on melting point of metals 8=3030

High-pressure phenomena and effects - contd
  metallic transition, in insulators 8=3992
    in ionic and molecular crystals 7=2832
  on mist formation 6=8733
  multi-anvil wedge-type apparatus 9=12846
  optical studies at v. high press., apparatus 8=937
  on oxide powders, in shock tube 8=5505
  permanent deformation, metals 6=731
  in planets, formation of metallic NH$_4$ 5=1307
    gravitational compression 5=5826
  on radioactive periods 6=2342
  Raman spectroscopy, cell for 9=12062
  research, review 5=6562
  seals for use to 10 000 atmos. 8=1554
  semiconductors 6=2863
    i.r. absorption 9=6754
  shear modulus, atomic no. dependence 8=4473
  solids, spec. heat and thermal expansion 6=8441
  solubility of solids in non-polar liq. 5=5927
  solutions, compressibility, calc. 9=5414
  spectroscopic apparatus for high press. 7=2013-14
  stress/strain curves of metals 8=4469
  structure effects, X-ray diffraction study 7=6742
  superconducting transitions, and low temp. elec. resistance
    temperature 9=4619 [6=8806
  techniques, general and optical, up to 20 000 kg/cm^2 9=1915
  thermodynamic props. and equations of state 8=1666
  Thomas—Fermi theory 7=6904
  on ultrasonic propagation in fluids 7=176
    in liquids 8=2197
  v.h.p. generation, meas. and appl. 6=5467
  A, compressibility 6=965-6
    thermal cond. up to 2500 atmos. 6=3672
    thermodynamic props. 9=3407
  Ag, elastic constants 9=1902
    shock wave compression 9=8791
  Ag—Zn, anelastic relaxation 9=5204
  Al, shock-wave compression 9=8791
    superconductivity 6=373
  alkali halides, colour centres 5=6617
  alkali metals, compression at low temp. 5=8333
  As, absorption edge 9=10784
  Au, elastic consts. 9=1902
  Au$_2$Mn, magnetization 8=7191
  BaTiO$_3$, structure 8=822
  Be, shock-wave compression 9=8791
  Bi, deHaas—van Alphen effect 5=8918
    elec. cond. and Hall effect 7=9684
    Hall effect in Bi and its alloys 5=8783
    phase diagram up to 130 000 kg/cm^2 and 500°C 8=8732
    polymorphic transitions 7=8228
    shock-induced, transition 8=1355
  Bi binary alloys 7=8230
  $(C_5H_8O_2)$n, temp. and heat capacity 9=5444
  CO, solid, phase changes 8=432
  CO$_2$, solid, phase changes 8=432
    viscosity up to 2000 atmos. 7=8455
  COS, CS$_2$, solid, phase changes 8=432
  Cd, melting point 7=1224
  Ce, phase transition 9=1375
    up to 12 000 kg/cm^2 8=1648
  α-chloronaphthalene in ethyl iodide on absorption spectrum [9=1281
  Co, shock-wave compression 9=8791
  Cu, elastic constants 9=1902
    elec. resist. at low temp. 8=608
    shock wave compression 9=8791
  D, melting curves 5=7896
  diamonds, elec. and optical props. 9=1914
  Fe, compressibility and eqn. of state 8=7478
    fusion curves 9=13222, 13224
    polymorphism 6=6946, 7741
  Ge, drift mobility of holes 6=8193
    resistivity, 0-2700 atmos., +125° to -150°C 9=6968
    semicond. props. 9=12268
    single crystal, elastic consts. 8=2685
  glass, optical and mech. effects 7=5970
    structure 6=8422
  graphite, electrical props. 8=623
  H$_2$, melting curves 5=7896
    molecule alignment 6=3689
    Raman spectra 9=9442
  He heated, as pellet propellant 9=76

High-pressure phenomena and effects - contd
  He, melting curves 5=7896
  Hg, solid, phase transitions 8=6471
  hydrocarbons, compressibility 9=885
    higher, viscosity 9=1123, 5395
  I, absorption edge 9=10784
  ice kinetic friction 5=2262
  In, at low temp. 6=2832
    melting point 7=7820
    superconductivity 6=373
  InSb, elec. props. 5=7956, 7981
    Hall effect and elec. resist., 6=7417
    piezoresistance 8=2320, 4985
  KCl, compressed powder, X-ray analysis 5=6631; 7=3841
    thermoluminescence 8=5799
  LiH and LiAlH$_4$, elec. cond. 8=3090
  methane, Raman spectra 9=9442
    solid, phase changes 8=431
  N, melting curves 5=7896
    specific heat 9=9571
  NaCl, crystal structure 7=1699
  Ne, melting curves 5=7896
  Ni, fusion curves to 10^5 atmos. 9=13224
    shock-wave compression 9=8791
  NiSiF$_6$.6H$_2$O, paramagnetic resonance 8=409
  NiZn ferrites, magnetic props. 8=5113
  O, liquid, compression by shock waves 7=2761
    melting curves 5=7896
    solid, phase changes 8=432
  olivine u.v. absorpt. edge 6=6521
  P, absorption edge 9=10784
    polymorphism 7=809
  Pb self-diffusion 9=8886
  polythene, permittivity 7=7083
  Pt, fusion curves to 10^5 atmos. 9=13224
  quartz, elastic constants, up to 1000 atmos. 5=7449
    solubility in aqueous Na$_2$CO$_3$ 8=5704
  Rb, elec. resist. at low temp. 7=7922
    phase diagram, to 150 000 kg/cm^2 and 400°C 9=13223
  RbI, RbCl, crystal structure 7=9466
  Rh, fusion curves to 10^5 atmos. 9=13224
  S, change to metallic form 8=6394
    elec. conductivity 8=7905
  Sb, melting point 7=1224
  Se, absorption edge 9=10784
    crystal growth, 4000 atmos. 8=7599
    polycrystals, elec. cond. 7=4382
  Si, elec. cond., 0-25000 kg/cm^2 9=2335
    fused, optical and mech. effects 7=5970
  Sn, superconductivity 6=373
  steel, hardness plateaux and twinning 6=6986
  Te, anomalous Hall coeff. 9=4632
  Tl, at low temp. 6=2832
    melting point 7=1224
    pressure—temp. diagram, $\alpha-\beta$ transitions 9=13227
    superconductivity 6=373
    superconductivity, transition temp. 6=2124
  Tl binary alloys 7=8229
  Tl$^+$—alkali halides, absorption spectra, up to 130 000
    atmos. 9=7959
  transition metal complexes, absorption spectra, splitting
    of 3d levels 9=4442
  triglycine sulphate, phase transitions 9=12845
  water, eqn. of stste 7=6933
    phase changes prod. by shock waves 9=1372
    ultrasonic absorption 5=7783
  Zn, melting point 7=1224
High-speed photography (See Cibematography, high-speed,
    Photography, high-speed).
Holmium
  heat capacity, 15-300°K 7=8572
  magnetic properties 8=2396
Holmium compounds
  Ho hexaboride, electron emission 9=4677
  Ho magnesium nitrate, magnetic props. 8=7184
  Ho$_2$O$_3$, magnetic props. 9=450
Humidity (See also Atmosphere, humidity; Hygrometers;
    Moisture).
  air, in large hallrel. to elec. charge of condensation
    nuclei 8=2712
  apparatus for producing air of controlled r.h. 6=6424
  apparatus for producing step-functions 6=967

Humidity - contd
effects on, aerosol size 9=11613
  density of Ilford G5 emulsion 9=14005
  Ge surface potl. 6=3757
  pulse discharge initiation 9=7022
  radiation pyrometer meas. 7=1237
  thermal-radiation standards 5=3537
measurement, review of methods 9=13073
Hydrodynamics (See also Flow, liquids; Jets; Liquid oscillations; Liquid waves; Magnetohydrodynamics; Viscosity).
accelerated motion of droplets and bubbles 6=6411
acoustic waves in chemically reacting fluids 8=8650
applications, many-boson systems description 5=3458
  shock propagation in metals 9=4385

biological macromolecules in solution 9=8775
bulging of surface by ultrasonic beam 7=4010
charged non-viscous fluid, quantum hydrodynamics 6=8016
chemical surface reactions in flow systems 9=88
classical fluid with spin 7=7590
compressible reacting and relaxing fluid 7=5909; 8=8607
conformal maps, computation 5=2458
cratering in ultrahigh velocity impact 9=6576
current and vortex sheet in conducting fluid, stability 5=6788
cylinder in bounded viscous liq., slow motion 5=5907
  circular cylinder between parallel plates 7=3048
in definitive relativity 7=2957
deposition of droplets from gas stream 6=8020
diffusion and viscosity in a spherical cavity 9=7826
drag on obstacles in flowing inviscid fluids 8=900
drops in viscous liquids, motion 7=9560
effect of small perturbations 7=9559
of electron gas 8=1106
equation of motion, Hamilton's principle deriv. 5=4406
equation of state of detonation products 9=4384
equations with linear vel. dependence 6=974
flow noise, conference 8=3836
fluid, in equilib. with external field 6=3697
  layer, in gravit. field and temp. gradient 7=3045
  in relativistic field 7=66
forces, on cylinders in stream 6=4862
  on lattice of flat plates 9=10668 [8=4813-14
  on solid bodies during propag. of acoustic waves
free surface oscillations in rotating liquid 9=7834
general variational principle for dissipative systems 5=3480
hydrofoils, limiting pressure 6=6415
  near water surface, pressure distrib. 6=2711
impact theory, complex hydrodynamic potential, 2-dimens. pressure models 9=10646
initiation of detonations 9=7564
instability, of fluid heated below (Benard problem) 8=2835
  of incompress. fluid, const. viscosity, varying density
  inhibition by electric current 9=8387 [5=4325
insul. liq. in electric fields, motion 6=5065
isentropic, in plane symmetric space-times 6=6335
in Jordan—Thiry unified field theory 9=7762
Laplace's eqn., n-dimensional field solution 8=5576
liquid HeII 9=12186
  hydrodynamic props. 5=1774
  in phonon region 5=5370
  quantum hydrodynamics 9=2272
  between rotating cylinders, stability 7=9139-40
  third and fourth sound 9=5630
liquids, heated by moving source, vert. ang. momentum
  heavy, free surface, eqn. of motion 6=4228 [9=12172
low-temp. behaviour of dilute Bose system of hard spheres 9=6537
mechanical moment of rotation of liquids in rotating elec. fields 9=4336
medium permeated by radiation, dynamics 5=1482
motion of 2 cylinders in inf. ideal fluid 9=5402
multiple formation of particles, theory 6=1854
Navier—Stokes eqns., 2-dimensional, unique "full" soln. of boundary value problem 9=7827
oscillating disks, in He^4 7=4282
  in viscous fluids 7=6927
oscillations, of the solar atmosphere 9=4214
  of wake behind flat plate 9=10667
porous solid, in liquid, oscillating, equilibrium 9=13046
quantum hydrodynamics 6=7354
  energy spectrum 6=6562
quantum-theoretical deriv. 5=7733

Hydrodynamics - contd
in a radiation field 9=10637
reflected shock Hugoniot for detonation products 9=4383
relativistic fluids, excited state 8=3707-9
  in rotation 8=2759
  with spin 7=3939-40; 8=865-6
relativistic, charged nonviscous fluid 9=6500
  equivalent to Dirac eqn. 6=910
  quadratic Lagrangians 9=9182
  of rotating fluid mass 8=2129-32; 9=3133
  of rotating fluid mass, central axis concept. 9=3107
  spin in rotating fluids 9=2124
  of spinning fluid, appl. toDirac eq. 6=4192
  variational principle 6=8568; 9=10556
  wave propagation 9=10570
  Zemplen's theorem, generality 9=10568
rotating fluid sphere, thermal instability 7=8554
rotating fluids, convective motion (conference) 8=2102
rotons in quantum hydrodynamics 5=8535
second-order effects, theory 5=3182
ship waves, theory 8=535
slow steady flow in gravitational field, velocity in field direction 9=8388
small vapour bubbles in liquids 5=5913
Sommerfeld's differential eqn. rel. to stability 6=6414
in special relativity theory 5=5856
stationary motion of viscous fluid around rotating sphere 9=6573
statistical, particle representation 6=1883
  porous media, correl. tensors 6=6408
straight waves in a ripple tank, speed 9=13061
streaming birefringence as research tool 6=953
superfluids, fluctuations 8=1656
  solutions of two superfluids 8=4931
superposed fluids in gravitational field, instability 5=7732
surface wake of submerged sphere 9=1139
suspended particles, interference 5=1255
  in vel. gradients, periodic rotations 5=6790
Taylor instability of interface, soln. of eqns. 5=97
transport processes in multicomponent systems 8=2173
variational principles 7=1100
viscoelastic fluids 9=90
viscous fluids, motion, conducting heat 7=1101
  transient motion 6=8615
viscous liquids, boundary condition problem 9=9285
  stationary flow 9=7828
water droplet collection efficiencies, calc. 9=9302
wave mechanics model 5=2443, 4380
  de Broglie's pilot-wave theory 5=3437
wedge entry into compressible fluid 9=11886
Hydrogen (See also Deuterium; Protons; Tritium).
adiabatic cooling by adsorbed para H 9=1820, 12741
adsorption, on Ni, effect on work function and cond. 7=449
  on Ni films, elec. resistance charges 9=10961
  on Ni, and $Ni(OH)_2$ formation 9=8979
  on Si films 9=7586
  on silica glass 7=6669
  on W 7=6671
  on W, sticking probability and effect on work function
alignment of molecules by high press. 6=3689 [9=5234
α-particle energy loss per ion pair 6=3953
arc, initiation 7=1336
  pinch effect 9=2378
  as pulsed u.v. light source 9=6776
atmosphere, effect on Ag/thin film Cu thermocouple 9=8173
atmospheres in red giant stars 5=2386
atmospheric, HT and HTO rel. abund. 5=598
  outer atmos. 9=942
  upper atmos., effect on auroral displays 8=5555
atomic, adsorption on silicon, photoemission and elec.
  dipole moment 9=8976
  clean-up 9=115
  conc. at cathode, calc. 5=589-90
  effect on conductivity of Ge surfaces 9=8114
  ferromagnetic line width 9=9814
  production by dissoc. of H_2 9=1502
  products of reaction with O_2 6=2488
  soln. in metal septa in hydrogeneration 5=7458
  on ZnO, effect on elec. cond. 7=7108
atomic mass 8=360
beams, atomic and molecular, condensation at Laval nozzle 7=2712

Hydrogen - contd
- beams, H^+, cross-section 9=3610 [5=2217
  - intense partially monochromatic molec., production
  - molecular, H and H—A mixtures, from Laval nozzle 7=2711
- binary equilib. with its isotopes 7=812
- boiling point, app. for reproducing 5=4602
- bonds in biology 9=8746
- cathodic, diffusion into Fe, mech. 5=563
- charge-exchange with π^- mesons 9=543
- charge-transfer with H^+ ions 9=1562
- chemisorbed, entropy 7=8249
- combination with varioys ions, rate of formation and cross-section 9=7129
- compressed, dielec. strength 6=5848
- convection zones in stars 9=3063
- diffusion, in Ge and Si at high temp. 7=8903
  - H_2—CO_2 system, thermal 5=6800
  - in H_2—D_2 mixtures 8=8623
  - H_2—D_2 liquid mixtures, coeff. 9=10923
  - H_2—He mixtures, thermal, meas. 5=6801
  - in metals, deuteron bombardment study 8=9055
  - in Ni 8=1334
  - on Ni, and adsorption 8=5510
  - through Ni, design of leak 5=1587
  - through Pd, 200-600°C, 10-70 cm Hg 9=2949
  - in mild steel 9=850-1
  - surface, on Ni 7=7480
- discharges, electrodeless 5=3807
  - glow, cathode-full region 8=8014
  - h.f., energy distrib. in l.p. glows 9=13343
  - at high pressures 7=433
  - h.p., radiative characteristics 8=8797
  - h.p., space-charge field emission, Hayashi data 9=7032
  - l.p. high freq., polarity effects 7=3324
  - l.p. high voltage discharges and arcs 8=1715
  - plasma temp. for Balmer series 8=3155
  - powerful pulsed, electron temp. and ionization 8=5941
  - pulsed, X-ray emission 8=2351; 9=2370
  - silent, influences on current and Joshi effect 9=7027
  - u.v. emission in corona 7=4130
- dissipation from planetary atmispheres 9=12955
- dissociation in microwave discharge 9=8698
- effect on charge of transmitted ion beams 8=5986
- effect on thermionic emission of oxide cathodes 9=7063
- effects at high press. and high temp. 7=2126
- elec. breakdown 7=7936; 9=2377
  - and ionization coeffs. 7=2364
  - pre-breakdown current 6=1328
  - spark, time lag 7=3316

Ion sources - contd
- proton, from thermal dissociation of H_2O 8=7123
- pulse-current production, by r.f. sweeping of beam 9=355
- r.f., for H^- ions, injector for tandem electrostatic accelerator 9=7090
  - high yield, charac. 5=347
  - for particle accelerators 5=348 [9=4717
  - for Van deGraaf generator, design data and performance
- solid (complex Al silicates), appl. to ion microscopy 5=2836
- thermal, ionization filament, in actinide element spectrometry 7=1387
  - with v. low substance consumption 6=5961
- for Van de Graaf generator, control and meas. 6=8247
  - for time-of-flight studies 5=6224

Ion velocity
- in air, cylind. fields, hot probe meas. 5=7152
- ambipolar diffusion, effect of variable mobility 7=4498
- diffusion of fast ions in plasma 9=1557
- in double charge-exchange processes 9=2455
- drift velocities, in O_2 7=5431
  - in own gas 8=5075
  - of positive ions 8=641
- effect on ion capture by conductors in elec. field 8=7878
- in electromagnetic spearators (calutrons) 8=1080
- gaseous ions, same sign, meas. method 5=8057
- in isotope mixture 8=7119
- in liquid A and He, 1-4°K 7=3202
- meas. in corona discharges in air 7=3314
- mobility, atmospheric ions, effect of light 7=6777
  - calc. liq. dielectrics, electrode effects 5=2758
  - effect of magnetohydrodynamic wave 8=7202
  - gaseous ions in elec. fields 9=373
  - gaseous ions, meas. 7=5430
  - in gases, 2nd approximation 8=8073
  - in He, Ne, and A 7=5432
  - low field, neg. ions in O_2, SF_6, SO_2, HCl 9=9725
  - negative ions in air 9=3611
  - negative ions, pulse meas. 5=8876
  - positive ions 5=4748
  - positive ions in A and Kr, temp. dependence 7=1420
  - positive ions in pure gases and mixtures 9=372
- multiply charged ions 6=3800
- in non-uniform field 6=8844
- in parent gases, at low fields 8=2367
- transverse, in A discharges 9=1499
- travelling density waves in positive columns 6=4522
- in unlike gases, at low fields 8=1738
- Ga, appl. to isotope separation 6=8260
- H^- in atomic hydrogen 7=493
- H^+, H_2^+, H_3^+, mobility in H_2 9=8262
- He mobility in liquid He 8=4925
- He^+ mobility in He 7=7992
- Hg, appl. to isotope separation 6=8260
  - mobility in He, N and A 7=9744
- Li, rel. to charge 5=8870
- Li^+, mobility in He gas 9=5104
- N ions in N 7=9745
- O neg. ion mobility, in noble gases H_2, N_2, CO_2 8=6005
- electrolytic (See also Conductivity, electrical, electrolytic; Electrophoresis).
  - ion self-diffusion in molten electrolyte under elec. field 5=9213
  - lattice model with ion—solvent interact. 9=10348
  - radioactive ion diffusion meas., KCl 6=6208
  - Cl ions in molten TlCl, isotope effect 9=6167
  - H_3O^+ and OH^- in water, mobility, -6 to 10°C 9=5221
  - Li^6, Li^7, Pb in molten LiCl—$PbCl_2$ 9=6346
  - NO_3^- and Cl^- in molten $AgNO_3$—AgCl 9=6347

Ionization (See also Dissociation; Electrons, ionization).
- by α-particles 9=560
- appearance potl. for some boron cpds. 7=3396
- in atomic collisions at keV energies 9=12399
- atoms, by α-particles, recoil effects 7=2551
  - by positive ions 7=8689
- auroral and magnetic disturbances 9=6400
- B^+, BO^+ prod. in B—B_2O_3 system at 1300-1400°K 6=8732
- in bubble chamber, ionizing power of particles 7=3402
- charge dependence on density of medium 7=7993
- charge-transfer collisions, anomalies 7=5429
  - cross sections 7=3780, 5426
- charged particle energy loss, density effect 5=8828;6=6710
  - fast particles 8=3283

Ionization - contd

    - secondary emission by Cs ions 8=5062
  - Pb, negative ion formation 7=7991
  - quinine and quinidine salts, by hydration, assoc. luminescence 6=5008
  - Si, by electrons 8=2357
    - impact, coeff. calc. 6=2105
    - Li-doped, rel. to semicond. props. 5=3741
    - negative ion formation 7=7991
    - by photons and fast electrons, quantum yield 9=5700
    - reverse-biased junctions 7=4349
  - Sn, negative ion formation 7=7991
    - by protons 8=6007
  - SrO, dissociation by electron impact 9=8865
  - SrO—Pt system, evap. by electron bombard., mass spectrometric study 5=356
  - Ta, by Cs^+ bombardment 7=1422
    - by protons 8=6007
  - W, Auger electron ejection by inert-gas ion beams 7=1421

Ionization, atmosphere (See also Atmosphere, radioactivity; Ionosphere).
- aircraft investigation 5=1406
- artificial earth-satellite meas. 8=6532
- along artificial earth-satellite path 8=6557
- auroral, due to absorpt. of Lyman lines 6=8526
  - radio-echo study 6=9133
  - rel. to geomagnetic disturbances 8=4597
- in Badgastein 6=6272
- by β-rays, meas. 8=6558
- biological effects, control 8=5569
- by blowing snow 5=5152
- Chapman's photoionization theory, non-isothermal atmos. 5=7560
- cold probe meas. 5=9733
- by cosmic rays, sunspot correlation 9=7141
- eddy diffusion effects near ground 5=1403
- effect of smokes 5=2834
- by electrons in corpuscular stream shock wave 6=885

Ionization, atmosphere - contd
    equilib. in air containing nuclei 7=1798
    hydrogen model for outer atmosphere 9=942
    intense, below 50 km 9=9071
    ion clouds, at low level 9=6396
    ion mobilities at Cairo 5=10125
    ionized layer formation processes 6=7065
    lower atmos. by α-rays from ground 5=5151
    by meteors, theory 5=2331-2
    microwave conductivity 9=12403
    pos. ion composition, rocket-borne spectrom. study 5=9303
    by protons, at great height 9=942
    radiation discovered by satellites, origin 9=7691
    by radioactive particles 8=4088
    relation to ground radioactivity 9=5280
    by solar corona X-ray radn. 6=6315
    solar corpuscular precipitation, spiral patterning 6=5555
    by solar Lyman α, NO photoionization 6=9130
    Störmertron analogue charged particles in earth's mag. field 9=956
    upper, neg. O ions 6=8527
        by particles from solar flare 9=6397
Ionization, surface (See also Thermionic emission; Work function).
    field desorption, theory 9=11132
    image force of ionized and polarized atoms 9=3575
    Ca, Sr and Mg, on oxidized W 7=503
    CsCl and KCl in elec. field 7=4506
    K, KCl and CsCl, on W filaments, temperature threshold rel. to elec. field 9=5855
    KCl, KBr, KI, KF, on Pt and W surfaces 6=8848
    Li, on hot W 9=8229, 9709
    metal crystals, field evap., pseudospiral formation 9=11622
    Na, on hot W 8=6004
    Na, Li, K, Rb, Cs, on Pt and W surfaces 6=8847
    NaCl, LiCl on hot W 9=9708
    polymers, by elec. discharges 9=7038
    Pu, on W and Ta 7=316
    S, det. of electron affinity 8=3406
    W 8=8851
Ionization chambers
    acoustic, for neutron detection 8=1144
    adaptation to rotameter flowmeter, with radioactive float [9=10662
    air monitor of H^3 9=12519
    air-sampling method 9=12520
    for α-particles, construction and props. of five types 8=4196
        design and action 5=6445
        for meas α-activity of air 6=584
        for Po-α-particles, saturation charge press. dependence, for CO_2, $A-CO_2$, $A-CH_4$ 9=7116
        for short half-life α-emitters 7=1405
    BF_3 filling, purification 8=2724
    BF_3—A filled, counting rates 9=3687
    β—γ discrimating meter 7=3577
    for β-ray measurement 5=5611, 7144
        low level counting, with dynamic condenser electrometer 8=8182
    Bi fission, for high-energy neutrons 7=9733
    calibration (0.5-3 MeV) in U.S.A and Canada 8=5159
    cavity ionization 7=7178
    characteristics, basic, formulae 5=6240
    comparison with scint. counter on fast-electron and X-ray dosimetry 5=3815
    for corona discharge radiation study 8=8796
    for cosmic rays, continuous operation 9=2549
        with cube-shaped working vol. and electron collection [9=8405
    Curie-type, improved 6=4462
    current characteristics, Shteĭnbok's solution 7=480
    as current sources in electrometer circuits 9=12393
    cylindrical, optimum shape 5=349
    dielectrics in, polarity effect, irradiation of collector [9=9892
    double, for star-producing radn. absorpt. study, Pb and C [5=1969
    effect of γ-rays scattered in water 7=479
    effect of using electron collection in a cylindrical chamber 9=11309
    electron attachment to pure oxygen 7=2350
    electron-pulse, purification 6=427
        shape 7=9241
    encapsulation in epoxy resin, radiation protect. 8=4195
    energy absorption meas. 7=474
    energy meas. of particles > 10^{11} eV 9=9893
    fast, energy and pulse spectra 8=6093
    field distortion meas., analogue method 6=6727
Ionization chambers - contd
    γ—β for activity control of solutions 9=4862
    graphite, cavity, for γ-rays 8=4303
        thick-walled, for high-energy γ-rays 7=2351
    guarded-field type 7=2349
        design data 8=3273
    guided parallel-plate, charac. 6=428
    high-pressure Al-walled 7=3380
    high-pressure methane chamber 6=6728
    with high RC values 5=1938
    impulse fission chambers 6=4461
    integrating, for α-activity meas. 9=2550
    intensity measurements 6=6726
    low-noise ballistic amplifier 9=7233
    l.p., for neutron distrib. in pile 5=2817
    miniature fission chamber 8=8183
    multi-plate, for slow-neutron detection 9=11307
    multi-purpose 2π counter 9=13520
    for neutron detect., fission chambers 5=3840-1, 9721
        personnel dosimeter 8=4197
    nuclear fission, α-particle background 6=4854
    O_2 contamination, counteraction 5=6241
        insensitive gas filling 5=7142
    organic vapour conc., meas. 8=5705
    plate,separation requirements 5=3842
    pocket dosimeter, built-in charger 5=5473
        for personnel protection 5=4752
    polyethylene terephthalate use for insulation 5=7026
    pressure regulator for continuous flow 6=5168
    pulse, operation at 4.2°K 5=8038
    for Ra sources, precise comparison 5=3035
    for radioactive standardization measurements 9=13628
    in reactor instrumentation 8=4339
        for control, design and siting 6=2959, 8252
        for power-level meas. 5=3994
    resolving power 7=7140
    saturation potl. det. 5=8037
    spherical, wall effect 8=7221
    standard free-air, plate sep. needed 5=5474
    for T meas., in H 5=5472
        continuous monitoring, differential method 5=8854
    thick-walled type, Cornell design, absolute response [9=12521
    thimble chambers, valve voltmeter for 9=7230
    tissue-equivalent materials, use 6=5343
    ungridded fast-collection type, line shape calc. 9=3688
    use as fission counters 8=670, 5160
    wall effect 7=1404
    for X-rays, up to 31 MeV 7=7976
        condenser dosimeter 5=7143
        detection against strong radioactive background, balanced filters 9=11308
Ionization gauges (See Vacuum gauges).
Ionization potential
    adsorbate in Ge p—n junctions 8=3108
    appearance potl., appl. to thermochem. calc. 6=4052-3
    atoms in a plasma, calc. from Debye—Hückel theory [9=7119-21
        "lowering" in plasmas 6=4425
    conjugated molecules, some values 5=7249
    critical, meas. with parallel-plate energy selector 6=5182
    diatomic hydrides 8=7449
    effect of electron bombardment energy 7=4492
    effect of unimolecular decay kinetics 9=5842
    per electron, cubic extrapolation rel. 5=3014-5
    by electron impact, comparison of method of meas. 9=5843
        significance, review 5=8869
    free radicals 5=5009
    from gas photocell characteristics 5=354
    some gases, from photoionization limits 5=8052
    G.M. photon counter meas. 7=7189
    large molecules rel. to dissoc. energies 7=5420
    Lisitzin effect 9=8264
    mass spectrometer meas. 5=5457
    89 molecules 7=5418
    neg. ion appearance potl., calc. calibration points 8=8071
    and polarizability of molecules 5=6370
    rel. to mesomeric effect, aromatic molec. substituents [6=1439
    rel. to molec. electron levels and bond lengths 6=6821
    rel. to nucleation processes 5=3682
    variation with atomic number 7=2357
    A, and atomic radii 9=10165
    Ac 7=7727
    Al to K, Si^+ to Ca^+, P^{++} to Sc^{++} 9=5089

    seasonal non-Chapman-like variations 9=5273
    soundings, effect of propagation conditions 6=1765
    sporadic echoes, Ahmedabad 6=9074
    sunrise effect 5=4230
    theory and statist anal. 6=7071
    variations in fE 6=2572
    vertical reflection conditions 5=5136
    winds 7=2861
    winds, c.w. radio study 9=4136
  sporadic E, at Brisbane 6=6266, 7079
    at Brisbane, lunar tides 8=8542
    double-layer phenomena, at Brisbane 7=6765
    intense, near mag. equator and aurora 5=3303
    ionization 6=2590, 5551
    ionization, effect of magnetic equator 5=3304
    ionization rel. to solar eclipse stages 5=3318
    ionization, rel. to thunderstorms 5=9286
    ionization, spread F, and radiostar twinkling 9=11650
    and ionospheric recorders 6=7865
    irregularity 7=940
    and meteors 9=4130
    movements 5=5138
    night clouds, at Brisbane, mean thickness 7=9475
    night-time motion at Brisbane 7=5755
    patches, motion 7=2862
    effect of transmitter power used 8=6533
    var. rel. to S_D field 6=2591
    worldwide occurrence 6=3386; 7=8311
  E to lower F2 layer, electron density meas. 8=6536
  E1 layer, effect of solar eclipse 6=7053
  E2 layer, two types of development 7=1779
  echoes, low, during polar blackouts 8=3607
    short-wave, from lower ionosphere 5=6326
    unusual patterns 6=829
  eddy coupling, effect on e.m. wave scatt. 6=834
  effective slope, windespread diurnal var. 5=5135
  effective tilts at places 1000 km apart 6=5558
  electrical conductivity 9=3009
    rel. to earth's field audio-freq. perturbations 6=1759
  e.m. oscill. in air—earth—ionosph. cavity, lightning-excited 8=7206
  e.m. reflection 7=4911, 8031, 9283
  electrons, collision frequency 9=9075
    concentration, rocket meas., using dispersion interferometer 9=4127
    diffusion in gas 5=7155
    diffusion, rel. to their density 7=3853
